NEW FARMSTEAD.—Persons desirous of TENDERING for FARM BUILDINGS to be erected at Walton Grounds, near Banbury, Oxfordshire, on the estate of Col North, M.P. may see the plans at the offices of the works at the office of Messrs PUSEY and CALEY, Auctioneers and Estate Agents, Banbury. The Tenders are to be delivered at the office of Mr J F CLARK, Architect, Newmarket, on or before SATURDAY, the 23rd of FEBRUARY. The lowest or any Tender will not necessarily be accepted. Quantities can be obtained on application to Mr CLARK

THE LOCAL BOARD of HEALTH for the District of WATFORD are prepared to receive TENDERS for the MAKING and CONSTRUCTING a section of the SEWAGE TANKS at the outfall of the sewers near the Town of Watford. The plan and drawings and specification may be inspected, also further particulars obtained by application at the Offices of JAMES PIRRAW OF Tottenham. The specification and condition of contract may be had upon payment of 5s. Tenders to be sent in on or before MONDAY, the 25th instant, endorsed "Tender for Sewage Tanks." By order of the Board.

JOHN SEDGWICK, Clerk.

Board-room, Watford, February 8, 1856.

MIDDLESEX and ESSEX TURNPIKE ROADS. Notice is hereby given, that the Trustees of these Roads are willing to receive PROPOSALS and CONTRACT for supplying BLUE STURN or GRANITE, of the hardest and heaviest quality, broken to a gauge of an inch and a half, best and heaviest quality, broken to a gauge of an inch and a half, to be free from dust, and delivered alongside Messrs. MESSON'S Wharf, adjoining to and on the eastern side of the River Lea, at Stratford, Essex. Such granite to be delivered there within four weeks from the date of the Tender being accepted, if such granite is of the size and contracted for and delivered within that time, a proportionate payment will be made in cash. APRIL next, above period. Sealed and endorsed "Tender for Granite," to Tenders sealed and endorsed "Tender for Granite," to be delivered at the Office of the Trust, before the 21st of FEBRUARY instant. The Trustees do not bind themselves to accept the lowest, or any specific offer that may be made to them.

GEORGE DACRE,
Clerk and Solicitor to the said Trustees.

Turnpike Office, Bow, Middlesex, February 8, 1856

DUDLEY UNION NEW WORKHOUSE.

The plans for this building (which, in accordance with the resolution of the Board of Guardians is to be erected for the sum of £4,000) may be inspected at the Office of Messrs. BIDLAKE and LYATT, Architects, of Wolverhampton, at which office and of the undersigned, the Specifications and Conditions of Contract may be had after the 10th instant, on payment of £1 1s. The working drawings and specifications will be ready in the beginning of MARCH, and the time limited for the delivery of TENDERS for BUILDING will be until MONDAY, the 28th of APRIL. The schedule being on the plan separate from the main building contracts are required to furnish distinct estimates for the two portions of the building.—By order of the Board.

THOMAS SHORTHOUSE, Clerk.

Dudley, Feb 11, 1856.

TO BUILDERS, MARBLE MASONS AND OTHERS.

THE LIZARD SERPENTINE COMPANY have to acquaint the public, that the Serpentine Chimney-pieces and other articles brought well by public attention in London were not the productions of the Quarries belonging to the LIZARD SERPENTINE COMPANY, which continues successfully to carry on its business in Slab and Manufactured Goods, that of the very superior quality, and in great variety of colours, at the Factory, Polless, Lizard, and Penzance, Cornwall, 29, Surrey-street, Strand.

HENRY FOX, Manager, Polless, Lizard.
F. W. RUFFLE, Agent in London.

Lloyd's Marble Wharf, Thames-bank, Pimlico,
A second Waggon of

ITALIAN STATUARY, veined, Sicilian, dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharf all hours.

Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

PARIS EXHIBITION. — ENAMELLED SLATE—TWO FIRST-CLASS MEDALS.—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of lee-tables, chiffoniers, consoles, &c.; corated slabs for the tops of lee-tables, chiffoniers, consoles, &c.; baths baptistries, altar-tablets, pilasters, columns, vases, pedestals, and brackets; washstand tops, billiard tables, linings to halls, and dairies. Price lists can be had on application to vestibules and dairies. Price lists can be had on application to Mr MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.

N.B. Plain slate work executed in the most single article to the most extensive contracts, for home and abroad.

CROGGON and COMPANY,
Manufacturers of
PATENT ASPHALTE ROOFING,
BOILER, RAILWAY, SHEATHING and INODOROUS FELT,
For Damp Walls, and Lining Iron Houses,
2, DOWGATE-HILL, LONDON.

TO CONTRACTORS, BUILDERS, &c.—EIGHTY AXE-DRESSED GRANITE BLOCKS TO BE SOLD a bargain. They are worked all round, and the beds made and taken to a height. The blocks are 2 feet 9 inches and 2 feet 7 inches, 1 foot 11 inches wide, and 1 foot 9 inches high. To be seen at the South Devon Wharf, Lower East Smithfield.—Price and particulars can be had by applying, by letter only, to B. R. PENTON, Postoffice, Lupus-street, Pimlico.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Prey rubbish delivered per barge, in any quantity, alongside the Thames.

9d.	10d.	11d.	1s.	1s 3d.	1s 6d per yard.

The hose is warranted at an extra charge of 1d. per yard. Union Joints, Branch Pipes, and Jets, are also supplied.

DURABILITY of GUTTA PERCHA TUBING. Many inquiries having been made as to the durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter FROM CHARLES MONDAY, Esq., Barr, VENTNOR, ISLE of WIGHT.

Second Testimonial. "March 10th, 1852. In reply to your letter, received this morning, I am glad to find Gutta Percha Tubing for Pump service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first having down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE made to Builders up on the lowest terms. Marquees and temporary Awnings on sale or hire. Orders for post receive the most prompt attention.—WILLIAM PIDDOCK, 187, Fore-street City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

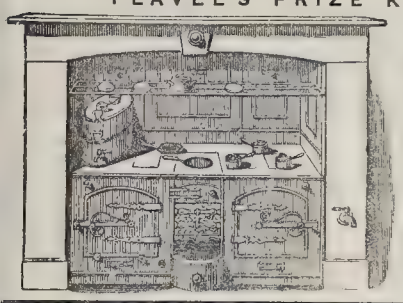
TYERMAN'S PATENT HOOP-IRON BOND FOR BUILDING PURPOSES.

TARIFF OF PRICES
Beyond the current Price of Hoop-Iron.

The undermentioned Gauges are kept in stock; but any Gauge or width will be supplied within a few days, at a small advance on the following prices:—

Gauge.	In. wide.	Per 1,000 ft.
No. 16	1¼	7s. 0d.
15	1½	7s. 6d.
15	1¾	8s. 0d.
15	2	8s. 6d.
15	2½	9s. 6d.

Plan and Elevation of Bond, showing Position and Form of the Claws.



THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 11½ inches on both sides alternately, and turning one side of each notch in succession contrary directions on the reverse sides of the iron, thus forming reversed claws, which are so bent, that a direct end grain of the iron is presented longitudinally, offering most powerful and effectual resistance, and which being driven half into the brickwork, embedded in the structure preventing the possibility of longitudinal escape, and a complete and permanent bonding together of the whole building is thereby obtained.

Patentee—FREDERICK TYERMAN, Architect, 44, Weymouth-street.

Sole Manufacturers—THOMAS PERRY and SONS, Government Contractors, Bilston.

London Depôt—463, OXFORD-STREET.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

PARIS EXHIBITION AWARD TO

COTTAM and HALLEN, of Winsley-street,

The original Inventors of the PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, and to which they have made important additions, the main features of the same being explained in the following description and Engraving.

A represents the Patent Halter-guide and Chain-rein, the ball of which is taken to the back of the manger-works with freedom and ease up or down the guide-bar, and is noiseless in its operation, as also a sure preventative against the most restive horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, made of galvanized sheet-iron, light and durable.

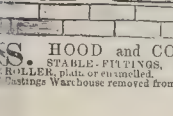
D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers. Sanitary Traps. Stable Pumps, Loose Box Fittings, Gutta-percha Pre-serving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.



The New Illustrated Catalogue for 1856 gratis on application. Estimates and Designs.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

FIRE-PROOF CONSTRUCTION.—

FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic outbuildings, within the reach of everyone.

Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 12, York buildings, Adelphi.

HEATING by HOT WATER.—J. JONES,

Iron Merchant, has always on a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-gates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark-iron-bridge.

Illustrated Price-catalogues post-free on application.

KIMBERLEY'S NEW PATENT FLOORING CRAMP continues to receive the patronage one and all, of every leading Builder Engineer, and Architect, not only in England, but throughout the world. Its simplicity, power, and economy still remain unquestionable, even by the side of its most important rivals, and the steady, annual increase in its sale, is the best proof of it. It is useful in many ways as a cramp, and unlimited evidence can be given that it is a most valuable tool, which no Builder should be without.

London Agents—Messrs. THOMAS PUGH & CO. Wholesale Ironmongers, 13, King-street, Snow-hill, London.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.

TO TIMBER MERCHANTS, BUILDERS, CONTRACTORS, and OTHERS.—TO BE SOLD, a PLANING-MACHINE (by Worssam, of Chelsea), nearly new; or would be exchanged for Timber, Deals, Battens, or Prepared Flooring Boards.—For particulars, apply to the Clerk of the Works, Victoria-road, Old Charlton, near Blackheath.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the Kings-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.
Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at
RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 13, Charles-street, Long-acre, London

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at 6d. on, abuting the foot.
R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.
OFFICES.—Gateshead-on-Tyne.
139, Strand, London.
57, Hyde-park-street, Glasgow.
57, Dale-street, Manchester

Engravings, with p discounts to builders and the trade, forwarded on ap post free.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

GARDNER'S PATENT SMOKE CONSUMER is SELF-ACTING, EASILY FIXED at a SMALL COST, IMPROVES the DRAUGHT, and SAVES FUEL. Applicable to all Furnaces, Boilers, Ovens, Locomotives, Marine Engines, and Open Fires.

"Chemical Works, Bow Common, November 9, 1855
"DEAR SIR,—In answer to your further inquiry concerning the saving of fuel in connexion with the use of your patented apparatus, to which inquiry I was hitherto, from incomplete observation, unable to reply, I beg now to state that we are enabled, without difficulty and without smoke, to command a full supply of steam, and to generate it much quicker than we could previously. We employ an ordinary furnace coal. I feel satisfied there is a considerable saving of fuel, the precise amount of which we cannot at present determine.
"I remain, dear Sir, yours truly,
"To E. V. GARDNER, Esq." "FREDK. ALLEN.
Apply to the PATENTEE, 24, Norfolk-street, Middlesex Hospital; or to Messrs. BURBIDGE and HEALY, 118, Dorset-street, Fleet-street.

SMOKY CHIMNEYS, either through high winds or bad draughts, may be remedied by the use of GREEN'S PATENT PROTECTIVE CHIMNEY-POTS. Any bricklayer can fix them. Price from 7s. 6d. Particulars sent on receipt of stamp for postage.—Address, A. GREEN, Zinc Worker, 6, King-street, Hammersmith.

By Her Majesty's Royal Letters Patent.

The Builder.

VOL. XIV.—No. 680.

WE are about to tell rather a long story, and perhaps a dry one,—the history of the dispute between the committee of visitors of the Cambridge Pauper Lunatic Asylum and the architects who were so fortunate as to have their design for a new asylum selected in a competition invited by the aforesaid visitors: we have no doubt, however, it will be found valuable by a considerable section of our readers.

In the year 1850 (September), the committee of visitors, through their clerk, Mr. David King, offered, through various newspapers, a premium of 150 guineas for the best plan, with estimates and specification, for a pauper lunatic asylum. The advertisement was of the usual character, and said, "any further information may be obtained" on application to the clerk. Desiring to compete, Messrs. Kendall, jun. Cope, and Edlin (whom we will throughout call Messrs. Kendall), wrote to him as invited, and in reply received a copy of a resolution of the visitors, extracted from their minute-book, ordering their clerk to advertise, and setting forth that the author of the selected design, if not employed, should receive the 150 guineas "upon the completion and delivery to the clerk to the visitors of all necessary drawings and sections requisite for carrying such plans into effect;" but if employed in the superintendence, payment for such drawings was to be included in the payment for superintendence. It is necessary to call attention to this: it is unusual, did not form any part of the advertisement, though it appears the committee considered that the architects were to be as much bound by it as by the printed advertisement, and might not have been seen by the competitors, as they were not bound to apply for further information.

In answer to the advertisement, upwards of fifty designs were sent in on the 30th December, 1850. The committee considered them until March, 1851, when they wrote to Messrs. Kendall, saying their plans were unanimously chosen for adoption. They attended the magistrates, and explained satisfactorily the design, which was then sent to the Lunacy Commissioners for their approval. In due time their architect reported, saying that he considered the estimate given in, 26,250*l.* was inadequate for the erection of the building; and he recommended the committee to have a revised estimate from the architects before the building was proceeded with. The committee communicated with the latter on this subject; and in order to surmount the objection, the plans and specifications were put into the hands of Mr. George Myers, the builder, and he at once offered the committee of visitors, in writing, November 25, 1851, *to execute the work, in the best manner, for the stipulated sum of* 26,250*l.* if they would give it into his hands without competition. With this the committee of visitors were satisfied; ordered some additional works amounting to 1,250*l.* and again returned the plans to the Commissioners in Lunacy for approval. In January, 1852, the Lunacy Commissioners approved, and the Secretary of State at the same time also approved the plans; and the clerk of the visitors wrote to the architects, for a form of advertisement to builders for tenders. In February the architects met the committee, at Fulbourn, where the building was to be erected, staked out the site, and were the next day directed to get out the working drawings. Some alterations were made, and the plans, so altered, were sent to the Secretary of State, and received his approval, 6th March, 1852; as they did afterwards the approval of the Justices of the County of Cambridge, in Sessions; also, the Justices of the Isle of Ely, in Sessions, and the Council of the Borough of Cambridge. United, the bodies passed a resolution, granting the sum of 30,000*l.* for the purposes of the works, and the working drawings were proceeded with, and the quantities taken out; when at Mr. Myers's wish, the architects wrote to the clerk of the committee, in May, 1852,—to say that, if his offer to do the entire work for the sum submitted with the design, was not accepted by the committee without competition, *he would consider himself absolved from his offer.* Soon the working drawings were completed; but it will be well, perhaps, to digress here a little, to state some facts connected with the case. It appears that the adjoining counties of Bedford, Herts, and Hunts were contemplating the erection of new lunatic asylums; and that the Cambridge committee had been, and were then, in communication with them, to amalgamate and erect one large united asylum, instead of several smaller buildings. This occasioned much delay: and it should be mentioned here, that Dr. Hill, who is the medical superintendent of the York Lunatic Asylum, was appointed by the Bedford visitors, or was consulted as to the best way of carrying out their views. Dr. Hill was also one of the original competitors for the Cambridge Asylum, and was supported by Lord Hardwicke and his brother, both on the Cambridge committee; and efforts appear to have been made from the first to bring in Dr. Hill for the work. Various meetings of the Bedford and Cambridge committees took place as to the junction, but they found it could not be carried out. The clerk communicated this to the architects, and in June, 1852, advertisements for tenders appeared. A year and a half, it will be seen, had then elapsed, during which period materials and labour had greatly increased in value, and therefore it was to be expected that the original estimate would be proportionally increased; but Mr. Myers, notwithstanding any loss that might have accrued, would have carried out his offer if they had placed the matter in his hands. On the 16th July, 1852, the committee met to open the tenders: there were seven, the lowest, 33,650*l.* (from Mr. Myers), and the highest, 55,760*l.* and they resolved, "That as the tenders were considerably above the amount they were authorised to expend, neither of them should be accepted, but that the visitors should, if necessary, apply to the several courts of Quarter Sessions and town council for their sanction to an additional outlay." It was the committee's fault that they did not accept Mr. Myers's original tender, not the fault of the architects, and knowing well how material and labour had risen in cost during the time the matter had been in abeyance, they could not complain, and they did not. The matter stood over, and they tried to join with Bedford again: various meetings were held, efforts were again made to effect a junction with Bedford county, and Mr. Myers wrote a tender to do all the building works (with some reductions agreed upon by the architects) for 27,000*l.* and the engineering works for 3,000*l.* in all 30,000*l.* but the offer was not accepted. Fresh drawings embracing the alterations were made and explained on the 13th May, 1853, when, also, Dr. Hill expounded the details of his plan for a large asylum, and urged upon them its desirableness, instead of building for Cambridge only. They passed a resolution that it was desirable to unite with the other counties. Afterwards, Messrs. Kendall were written to, "as the junction matter was still pending," for their account up to that time, and the total amount of their claim against the visitors, "in the event of their plans being given up." The architects, considering they had determined not to build their individual asylum, sent in an account to the following effect:—

Premium for the best design	£157 10
2½ per cent. commission on the lowest tender, 33,650*l.*	841 5
Travelling and other expenses.....	50 0
Total	£1,048 15

Mr. Percy, the surveyor who took out the quantities, also sent in his account:—

1½ per cent. on the lowest tender.....	£504 15
For sundry expenses.....	36 15
Total.....	£541 10*

On the 23rd of November, 1853, the committee of visitors met and decided *against* joining with Bedford, &c. and after various meetings, finding, as they said, that Mr. Hill's plan was more simple and capable of being carried into execution, than that of Messrs. Kendall, recommended that Mr. Hill's plan be adopted." No complaint is made against Messrs. Kendall, but after giving them three years and more of labour, the visitors coolly supersede them, saying, "they find Mr. Hill's plan more simple and capable of being carried out."

Mr. Hill's plans were afterwards rejected at the Sessions, the Court not thinking it right to rescind their former resolution. Lord Hardwicke, in consequence, resigned his position as one of the committee, as he had moved the adoption of the report at the county meeting. The town council of Cambridge also rejected the new design for the same reason. But the committee of visitors were determined. To make the story short, Dr. Hill's design was adopted; and an agent on the part of Mr. King, offered to pay the architects the premium of 150 guineas, and to submit all other matters in difference to arbitration; but as he wanted barristers, and Messrs. Kendall required architects, they could not agree; and the architects feeling, as well they might, seriously aggrieved and prejudiced by such a termination of the engagement, considered it was proper to submit the case on that account to the public, through a court of law.

The Attorney-General, and Messrs. Phipson and Bovil, barristers, recommended that the action should be brought against Mr. David King, the clerk and agent of the committee of visitors, and through whom all their orders came. The cause was opened on February 16, 1855, at the Court of Common Pleas, Guildhall, when the Lord Chief-Justice recommended "the action to be referred to Mr. Cleasby, with the usual powers and terms, to raise any point of law at request of either party; and if he or the Court say action will not lie, then he and the Court to say what and against whom is the remedy; and in any event to find what is the amount due: the 150 guineas to be paid in a month, without prejudice to any question in the action." The jury then found a verdict for the plaintiff, subject to the above reference, which was agreed to by both parties.

The arbitrator held his first meeting on the 21st of May, 1855. On the part of the architects appeared Mr. Cockerell, Mr. Tite, and Mr. Mocatta; in support of the committee of visitors, Mr. Bellamy, Mr. Poynter, and Mr. Shaw, who considered that the terms of the advertisement covered everything,—competition drawings, working drawings, details, and all services, though for three years or more, short of the actual erection of the buildings!!! For the competition twenty-seven large sheets, containing sixty-one distinct drawings, had been sent in. The working drawings, made by order

* This account is also disputed, but Mr. Percy only waited to know the proper person to sue, and will now try the case at once.

of the committee, consisted of eighty-five distinct drawings and details, on sixteen sheets of large paper; and of these two sets had been required. In the whole there were 241 drawings, with a full working specification.

Mr. Tite's evidence was clear and precise. He considered that an architect is entitled to a commission of 5 per cent. on the amount of the contract, if he actually superintends the erection of the building designed by him, and to 2½ per cent. on the lowest tender, if, after the working drawings, estimates, and specifications are completed ready for contracting, and the tenders are received, he is not employed in the superintendence of the erection, whether in consequence of the abandonment of the works by his employer, or from any other cause. That such rates of commission are exclusive of travelling expenses, allowance for time, and the charges of the measuring surveyor (which are paid to such measuring surveyor by the builder if the work proceeds, and by the employer of the architect if it is abandoned). He quoted the opinion of a committee of the Institute of Architects, to the effect that, although this was the customary charge, it ought to be at least 3 per cent. He drew a distinction between drawings requisite for showing how the designs could be carried into effect as asked for in the clerk's first letter to which we have referred, and the drawings afterwards made by order of the visitors necessary for obtaining tenders in competition: and finally he considered the charge made (1,048*l.* 15s.) fair and proper for the employment specified.

On the 26th November, 1855, the arbitrator made his award, and found that the amount due to the architects beyond the premium of 157*l.* 10s. previously paid was 498*l.* 16s. making together 656*l.* 6s.; and he directed that if the action was maintainable against the clerk, that then he should pay all the costs (taxed) of the suit of the arbitration and award. That if not, then both parties were to bear equally the expenses of the reference and award. The committee raised the question at law, that their clerk was not liable; that though they might owe the architects money, they had no fund or money to pay them with, and that by law the architects had no remedy against them individually or collectively, or against their clerk. On this question the arbitrator, by mutual consent, drew up a special case, to be argued before the Judges, the real question being, *by what form of proceeding, and against what parties the above-named sum could be recovered.*

On the 29th ult. the case was argued by counsel on both sides in the Court of Common Pleas.

Chief Justice Jervis said—This is a very important, and in some measure a difficult case. I and my learned brothers have, since the last hearing, given it our best consideration; and though I am not free from doubt, yet I think that the plaintiffs are entitled to a judgment. Looking at the Act of Parliament, I think that the legislature intended that the Visitors should be a body with power to act on behalf of the county, to select designs, and enter into contracts, subject to the approval of the magistrates assembled in Sessions, and finally, that of the Secretary of State. It would appear that in the first place the Visitors applied for plans, and agreed to pay the sum of 150 guineas to the successful competitor, on condition that, if the plan selected as the best were eventually carried out, it should not be paid for, but be taken as paid for in the sum paid for the erection of the building. Plans were sent in, and that of the plaintiffs was selected: and so far the proceedings were in accordance with the 17th section of the Act. It is my opinion that the Visitors were acting strictly within the scope of their authority: the legislature contemplated that they should have power to superintend the erection of the building, or to buy or lease one, so that it is clear that they had power to enter into contracts: they did enter into a contract, and the question now is whether it could be enforced. Now, the legislature never intended that public officers should be personally liable, and so by the sixteenth section provided that they should sue and be sued by their clerk. I think that was only in order to afford an easy mode of doing that which they were liable to without. The next question is, are they liable for the work done in addition to the supply of the original plan? I think that they are; for, if they had power to make a contract for the building, they had power to order specifications and working drawings: they did order them, and the question now is, whether the plaintiffs have a right to be paid for their work and labour done. I think they have, and my judgment therefore goes for the plaintiffs on both points.

Mr. Justice Cresswell, Mr. Justice Williams, and Mr. Justice Crowder fully coincided with the Chief Justice, and a verdict was recorded for the plaintiffs.

The conduct of the Committee of Visitors of Cambridgeshire, Isle of Ely, and borough of Cambridge, in this affair, needs no comment from us. Messrs. Kendall, Cope, and Edlin, have achieved a useful victory, though in a pecuniary point of view their personal profit will probably be small.

MR. PETIT'S LECTURE.

THE PRESENT MOVEMENT.

I WAS prevented from hearing Mr. Petit's lecture on "Utilitarianism in Architecture," and knew it only from the report you have given, which I presume to be a pretty full one. With nearly all which is really on the subject he puts forth as his title I most cordially agree. His remarks are replete with good sense, and rich in useful practical hints, as indeed are all Mr. Petit's writings.

It is almost idle to state on what point I differ from him. There are, as every one knows, two parties among those who give attention to architecture at the present day—those who favour, and those who oppose, the revival of Gothic, as distinguished from Classic architecture; and the mere statement of which side different individuals chance to take, is as unimportant as it is uninteresting; and in the present instance, it is of so little consequence to your readers whether Mr. Petit happens to think one way and I another, that I must really apologize for intruding upon them with apparently so very little to say; for *de gustibus non est disputandum;* and really all which Mr. Petit and a hundred others have to say on one side, or those who think differently say on the other, amounts in the end to little more than registering our individual votes on our several sides. Of course, every one has something to say about his opinion, but as matters of taste depend not on *argument*, but on *feeling*, we never practically get beyond the simple registration of our suffrages.

If Mr. Petit takes more interest in a railway shed than in the best modern churches, or if I happen to feel more interest in the revival he repudiates than in works of infinitely greater pretension of the style of the last two centuries, no statement of our reasons will influence either of us, or perhaps any one else. Still, however, it may be well, if only for form's sake, to state one's dissent, as well as one's regret, at not having on our side a man for whom personally, as well as for his remarkable talents, I feel so strong a regard as Mr. Petit.

Mr. Petit, as all the world knows, published in 1841 a delightful book on Church Architecture. In that book he did not, it is true, express himself strongly as to the probable success of our revival then recently commenced; but the express object of his book was to promote it. Throughout the whole of the book he seems to take it for granted that our future churches will be Gothic. He accordingly urges strongly the study of our ancient buildings, points out their excellences, and presses the revival of their spirit.

"The builder of churches," he says, "ought to make observations on the most extensive scale, to collect examples from other countries, and to look upon those of his own not as inconvenient old fabrics, which he may one day have to enlarge or rebuild, but as models of grace and dignity, from which he may gain much instruction. He should measure most accurately both the lines and angles of many humble and unpretending structures, which the antiquary and even the artist disdains to notice. He will thus learn, not to imitate, but to invent, perhaps to mark the period of his labours by a style distinguished from that of his ancestors, otherwise than by its meagreness and deformity."

Let it not, however, be said, that he raised his expectations high, and that fifteen years' experience has disappointed them. He did *not* do so. Let us hear him again.

"But, above all, let the architect himself be prepared to sacrifice much. Let him not grudge his time and labour to a task of which he cannot hope to reap the honour and profit: let him be content to lay the foundations of an edifice which a future generation shall see completed; to toil for the recovery of hidden principles and lost harmonies which the master-spirit of a succeeding age may awaken into life and perfection;—or else let him not seek to be entrusted with the humblest edifice dedicated to the service of the Almighty. To this self-devotion we owe the monuments of ancient piety: their builders were not led by ambition,—they sought not, and received not, the rewards of personal fame. Few of their names are known, while their works are the admiration of posterity."

Now, what can this mean but that the architects engaged in the Gothic revival were not to expect in their own day the honours of success, and that they were nevertheless not to allow themselves to be discouraged by apparent failure? That, like the husbandman, who "waits for the precious fruit of the earth, and hath long patience for it," we should also be patient, though we may see no fruit in our own day; and "be content to lay the *foundations* of an edifice which a future generation shall see completed."

How does the sentiment—noble as it was just—accord with his present statement,—"I now feel that if genius, talent, or knowledge could have ensured success, the revival would have been already complete?"

They can only be reconciled by placing the writer in the long catalogue of those who preach what they do not practise, and who utterly fail in the exercise of the patience which they enjoin upon others!

Instead of a whole generation which Mr. Petit stated, in 1841, to be likely to elapse before seeing the fruit of our labours, fifteen years' only have passed;—some, alas, of our band have fallen early victims of too anxious labour,—but those who were young when Mr. Petit exhorted them to patience are still but in middle age; and many, whose boyish zeal was stirred up by the works of Mr. Petit and others, are but now commencing an enthusiastic and honourable course of active exertion. I would then ask any dispassionate observer, whether the progress made since Mr. Petit first wrote, has been so disproportioned to that which he led us to expect *in an entire* "*age*," as to warrant his breach of the patience which he urged upon others, and his conclusion that the success of the endeavours he so eloquently encouraged may now be deemed hopeless? I do not hesitate to say, that the *very contrary* has been the case. The progress, though slow, as Mr. Petit warned us to expect, has been sure and substantial, and in my opinion, with all its drawbacks, such as would have astonished us in 1841, had we been able to foresee it.

Architects must not be considered to be free agents: they are not allowed to advance as they would wish: they have in many instances to fight almost every step: unreasonable employers; non-employers whose patronage they might have justly expected; those who oppose their movement; and ill-natured critics among those who favour it; the disquietude of the age, which denies them time for study; and the coldness of all around them which "checks the genial current of the soul," are all so many daily and hourly clogs upon rapid progress. I do not hesitate to say, that no set of men possess so much enthusiasm as the Gothic revivers. They work from real and deeply-seated love, and every hindrance and every chill gives them deep pain. They have little patience with themselves, but they merit all the patience from others which Mr. Petit urged, but himself denies.

Mr. Petit himself, in 1841, says of the architect:—

"Can we say that he has generally met with that support and encouragement which he has a right to demand; and which being withheld, we cannot look for those efforts on his part that will secure excellence? I do not speak merely of pecuniary reward: this is the last inducement which will influence a man of genius, even working for his subsistence. But do we give him that encouragement which can only be afforded by a due appreciation of his works, by discriminating praise, by fair and candid criticism, by congeniality of taste and feeling? Does he not in most cases stand alone, or supported only by such assistance as he would most willingly dispense with?"

In spite, however, of all hindrances, I do assert that we have made great and signal progress. It is quite true that the country is studded with churches, the majority of which scarcely reach mediocrity; but this is only parallel to what is the case in other styles. The system of the day places the majority of works, in whatever style, in the hands, not of the small band of architects who follow their profession as an *art* to which every feeling of their hearts is devoted, but in those of the many who follow it as a *trade*. And I speak advisedly when I say, that not one church in five is placed in the hands of those who care a jot about the success of the revival. As one of the examiners for the Church-building Society, I can assert that a large majority of the new churches are designed by persons who have given no attention to the subject—persons employed through local interest, through competition, and through the utter ignorance of the employers; while young architects of undoubted talent, and having both knowledge, skill, and enthusiastic zeal, go unemployed because they will not stoop to the arts which the public seem to consider the necessary passport to their favours. It is no wonder that the works of such men cause our movement to be regarded as a mere fashion; but, happily, there remains a firm band who work from no such motive, but from pure and earnest love and devotion; and I cannot but feel confident that labour which proceeds from such feelings will eventually be successful, though even that may stand in need of the patience so eloquently preached, but so little practised by my friend Mr. Petit.

With all its disadvantages, however, and its partial failures, I challenge the history of art to show in any fifteen years such a revolution as has been effected in church architecture between the years 1840 and 1855. What we have done is open to all kinds of criticism, and we see our faults and weaknesses too clearly to allow us to object to their being pointed out by others; but with all our failures we have worked a vast and signal revolution; and, which is much more important, we are prepared and determined to carry it on to its ultimate consequences, and to develope the style which we have thus far revived into *one of our own*, independent of precedent and of antiquarianism.

Mr. Petit, fifteen years back, spoke in terms of praise of a church then recently built in Staffordshire. A friend of mine, who stands very high in our profession, was lately referred to this by an admirer of Mr. Petit's works, and actually took a journey to see it, when he found it so utterly bad as to be beneath all criticism. I mention this, not in disparagement of Mr. Petit's judgment, but to show the progress which has converted what he then praised into an object almost beneath contempt. Mr. Petit has, since that, honoured one of my own churches in the same way, yet this church would now fail of being admitted as a favourable exponent of our progress. The same result will ever be found by comparing parallel works of a few years back with those of the present time. It is true that the same architect may fluctuate; but compare fairly the works of those who are in earnest in our revival, and you will find them to display unequivocal signs of a regularly progressive advance. We may wish that this advance were quicker, but its existence, on Mr. Petit's own showing, is sufficient to encourage us to patient perseverance,—not to mention that it is to our movement that we mainly owe the growing appreciation of "Utilitarianism in Architecture;" of the great principle of making utility and construction conduce to beauty; and the exposure and repudiation of the degrading system of shamming and deception which was eating away the very vitals of our art.

The great weakness of modern art is the *inconstancy* of the public taste,—and I can conceive of nothing more injurious than the course followed by Mr. Petit, of first fostering a great movement by a series of publications eminently calculated to promote it; and, when it has so thoroughly taken root as (in its own department) to have driven all competitors out of the field, and placed itself in a position to commence a healthy course of development such as can alone make it a genuine offspring of our age, to turn suddenly round and throw cold water on the entire movement! It is this waywardness and fickleness of taste which makes architecture contemptible. People follow one style as the great panacea till they chance to visit a country they have not before seen, and come home filled with new notions, which they urge upon others till they happen to make another tour, which pushes the last idol from its pedestal, and enshrines a new one, only in its turn to be overthrown. This frivolity and unsteadiness of aim will destroy success in anything. It is only those who fix their aim steadily on one object, and make whatever else they meet with contribute its quota towards its accomplishment, who have a chance of ultimate success.

The fact, however, is, not that *we* have failed, but that *Mr. Petit's* views have changed. He may be unconscious both of the fact and of its causes, but others can pretty readily appreciate both; and Mr. Petit will perhaps pardon me if I give a rough guess at the latter.

Though a clergyman, Mr. Petit's tastes (so far as they bear upon architecture) are rather artistic than ecclesiastical. Many, on the other hand, who have promoted our movement, have been rather ecclesiastical than artistic in their views; and, as is usual with all zealous persons, have been guilty of many exaggerations, and not a few frivolities. Mr. Petit's turn of mind is eminently one to rebel against such eccentricities, and would lead him to attribute to the whole movement what is in fact the mere boiling over of undue warmth and unrestrained enthusiasm. Again: those who have taken the more ecclesiastical view have not received Mr. Petit's works so kindly as they deserved. They were too purely æsthetical for them, and were not warmly responded to. This, though Mr. Petit's kindly feelings render him incapable of bitterness, would increase the coldness between him and the party in question. Then, again, he would see in the criticisms of that party much waywardness, and not a little unjust partiality, against which his natural sense of justice would rebel, and which would tend to convert coldness into something bordering upon hostility. To crown all, he would see this sweeping criticism especially directed against one of his most intimate friends, Mr. Winston—a man whose temperament was less calculated to bear quietly with it than his own. Mr. Winston's services to our revival have been of the most important character, but his feelings have clearly been so warped by the criticism he has received that he has almost been converted into an opponent of the entire movement, and can scarcely restrain himself from converting his valuable lectures on stained glass into mere philippics upon the Camden Society; while every one who knows him and Mr. Petit is well aware of the influence which this has had upon the kind and generous feelings of the latter gentleman. Thus prepared by a gradual process to fall off from us, Mr. Petit has revisited Italy, and (with the eye of an artist) seeing beauties in what he once viewed as "a miserable display of wasted labour," he now finds the elements of some imaginary future development, where once his mind "dwelt with pain upon the professed abandonment of those principles by which alone art can be advanced, or preserved from falling into decay."

Mr. Petit's list of failings in Gothic architecture do not appear to me to need much remark, being merely attempts to excuse his own change of opinion.

If many Gothic buildings have mouldings of too great a depth, others are not moulded at all, and he has shown us that some French examples with plain bold mouldings look the best. Surely, then, this fault is not essential to the style! Nor do I believe that the decay of our mediæval buildings is owing to an excess of moulding. It simply results from the humidity of our climate, and the inferiority of much of our stone. Where the stone is bad, we find the plain ashlar gone as well as the mouldings, and where good stone is used, the ornamental features are often as well preserved as the ashlar. Classic details are as little proof against decay as Gothic. Where do we see a more shapeless mass of hopeless rottenness than All Saints' Church at Oxford, built in the Palladian style at the time of Queen Anne? Are the Peckwater buildings, the Clarendon, and the theatre in the same city, better preserved than Gothic buildings of twice their age? And has not the exterior of Inigo Jones's Banqueting-house been wholly renewed in our own day? The only thing which makes Sir Christopher Wren's buildings other than masses of decay, is the happy introduction in his time of Portland stone. The constant reparations of French cathedrals proceeds far less from the actual decay of their material than from the rage for freshness of surface which unhappily prevails so strongly in that country.

It is quite true, that where any special weight is to be carried, the form of the arch should be proportioned to its load. The pointed arch carries greater weight, and has less outward pressure than the semi-circle; but still there are places where the latter may be theoretically better, though, for my own part, while I have severely suffered from the tendency of the round arch to spread laterally, I have never yet experienced the tendency of the pointed one to rise in the centre. The one is a practical fault which any one will find if he does not look well to his abutments: the other is little more than an imaginary imperfection. The great superiority of the pointed over the round arch is that the former may be made of every conceivable degree of lowness or height which its use or position may dictate, while the latter is the same under all circumstances; and even if we throw the segmental arch into its scale, all we can say is, that it may be of any height not exceeding half its span, while the pointed arch may be of any height you please. But if this argument does not claim for it the preference, Gothic architecture puts in another claim, viz. that of freely admitting not only every kind of pointed arch, but also (as Mr. Petit has himself shown) the semi-circle and the segment, uniting in itself all kinds of arches which are founded on the circle, and not, that I know of, excluding any other form.

The question of how far it is legitimate for ornament to imitate constructive features, is one well worthy of a careful and philosophical investigation. I think there should be limits to this; and, if the old Gothic builders carried it to excess, it is a point offering us a fair opportunity in which to improve upon their practice and develope for ourselves.

The objection, on the ground of an imperfection (real or imaginary) in one pattern or tracery, appears to me almost puerile. Surely Gothic architecture does not hang upon the mathematical exactness with which a circle will stand upon two arches! With good management the objection vanishes, as the width of the tracery-bar fills up the notch complained of. No one has had much to do with architecture without knowing that little mathematical inaccuracies beset him in every style, which it is a part of his art so far to abate as to render them inoffensive.

The objection to that concentration of pressure which gives buttresses a functional predominance over walls, certainly, if an objection at all, does not apply to the majority of churches which we are likely to build, and which are devoid of vaulting. This, or any other principle, may be carried to excess, but *we* are quite safe on that score. I may here be met by Mr. Garbett's argument, that in omitting the vaulting we make our buildings imperfect. This I simply

deny. I grant that a vaulted church is the fullest development of the style; but I hold that a Gothic barn is as good a building in its way as a cathedral. I yesterday visited an abbey barn after spending some hours in a cathedral; and the idea of one being, of its kind, a less perfect building than the other, or less carrying out the principles of its style never so much as occurred to me. Mr Petit's objection to Gothic churches because they cannot compete in height with the gigantic houses which may surround them, seems to me both sophistical and erroneous. It is manifest that *no* ordinary church can compete with some of these overgrown piles; but surely a Gothic church is likely to be higher than any other; and the argument that it will fail the more manifestly from the fact of its making the most of its height, I do not hesitate to pronounce utterly fallacious. The very fact of its differing *in kind* from the lofty houses will diminish their influence upon it. A tall man makes a short man look shorter; but he will have no such influence upon creatures of another species. I heartily thank Mr. Petit, however, for his very valuable suggestion of bringing *mass* to bear against height. I shall certainly endeavour to avail myself of it.

I must apologise for the length to which I have extended my remarks. I have no hope of shaking Mr. Petit, or influencing those who agree with him. If he should think it worth while to notice what I have said, though I have no idea what line he would take, I doubt not that he will (as a clever man always can) perfectly satisfy all who already agree with him. My object is rather to prevent his unsettling the minds of those who had embarked in the same course with us. These I exhort not to be shaken by the changes of others, but, having chosen their course, to pursue it with patience and determination. I doubt whether, if Mr. Petit had the least idea of the enthusiasm and earnest zeal which exists on our side, and how completely it is with us a matter of heart and of love, and how little one of mere fashion, he would not, even now, throw the weight of his influence and knowledge into our scale, and assist us in getting over the difficulties, and in avoiding the imperfections, which he perceives, rather than attempt to quash a movement which, for unity of purpose and heartiness in the pursuit of it, has no parallel in the history of modern art.

Geo. Gilbert Scott.*

FOREIGN ART AND SCIENCE NEWS.

Rome.—Restorations.—The Loggia in the castle of the Vatican Palace, whose stucco works and frescoes had much suffered by time, has been completely restored. The majestic porticoes also on the Place before St. Peter's Dome, in the midst of which stands the obelisk of Caligula, have been restored. Especially the 162 saints and founders of monastic orders, who stand on the balustrade which runs around the roof and its galleries towards the Place before St. Peter's, are now restituted to their original condition.

The New Rhine Bridge at Cologne. — The Building Privy Councillor, M. Anders; the director of river constructions, M. Nobling; inspector of the Rhine navigation, M. Britzke; and the water architect (Wasser-Baumeister) M. Crewes, have inspected the terrain destined for the above huge structure, about the suitability of which doubts had arisen. The commission, however, confirmed the first plan.

A Novel Science.—The researches and results of the Abbé Paramell, to discover sources of water in every soil, have been long known. Now, M. P. has brought his doctrine into a perfect shape, and has published his work under the title, "L'Art de découvrir les Sources."

Florence.—The Amazon Shield.—This important work of mediæval sculpture has caused much controversy of late, men like Cornelius having taken part in the dispute. The following is its history. Through the chances of a general ransacking of all the collections of Europe, this costly shield had been sent with other plate to a Jew at Cologne. One of the persons who saw it by accident, was the painter Osterwald, who, understanding its value, induced his brother (a dealer in art-objects) to buy it. Hence the fame of the Amazon shield became spread over Germany, and Osterwald made a lithograph of it in its natural size. Cornelius, when passing through Cologne, saw it, and recommended the king to purchase it for the Berlin Museum. The king, on seeing it, said smilingly, that "he was not rich enough to purchase it." The King of Hanover also entered into negociations; but out of delicacy awaited the decision of the king, who finally bought it. Besides the lithograph, a galvanoplastic *fac-simile* in silver had been made of the shield, at the Sayner works, and it was one of those specimens which was presented by the Duchess of Sutherland to the members of the Cologne *Gesang-Verein*. It has been much debated whether this shield is by the hand of Benvenuto Cellini: on comparing it with the many works of that master in the Ducal Collection of Florence, some doubt may be entertained thereon. Still the work belongs to the best Italian period and style. It is worthy of remark that a shield of similar character was designed by Cornelius, executed by the first silversmiths of Berlin, and is now to be seen at Windsor Castle.

SIR ARCHIBALD ALISON ON ARCHITECTURE.

At a recent meeting of the Architectural Institute of Scotland, held in Glasgow, Sir Archibald Alison made an address, of which we now give an outline.

It had often occurred to him, the speaker said, on walking over their city and attending to the prodigious increase of architectural ornament, that they were deeply indebted to the Architectural and other similar Institutes in different parts of the country, which had spread so far the taste for ornament of this description, and led to so large a proportion of the surplus wealth of the country being employed on works of architectural ornament and utility. If any city in the world was called upon to devote a large portion of its surplus wealth to such works, it was Glasgow, which at once possessed the wealth that was absolutely necessary, and also the durable stone which rendered the works almost immortal. They had only to look at the Cathedral, which had stood for 600 or 700 years, to see that a building of such material once erected was destined to elevate the minds of men through many centuries. In surveying the various edifices which had been raised in this and other cities of the empire of late years, all must have been struck with one observation, that while in them all we perceived a great striving after excellence, there was a great difference in the degree to which that excellence was attained. Now, he believed, the great object was to see what was the *principle* upon which each style should be founded, and thus discover both what was the leading principle which each style should bring out, and by what way. By a violation of that principle the most costly efforts proved unsuccessful. If we looked back to the history of architecture, we should find there was a leading principle in all the different styles of architecture which had existed from the earliest times, and in different nations, and that perfection was to be attained in each only by following out the principle upon which the style was originally formed. The earliest works extant were the Egyptian, and the principle of the Egyptian architecture was the cavern. The Greek architecture was perfectly different. Its principle was the principle of the beam, obviously imitations of temples of wood, with no imitation in any part of the cavern or of the rock. Accordingly the Doric architecture, which was the earliest style, contained exactly the large straight trunk of a tree, with some chiselling down at the side. The principle of Greek architecture was, strictly speaking, one story only, and that with straight lines. The principle of the arch was foreign to Greek architecture. It was to be found in the *cloacæ*, but there was no example of it in the edifices. It followed from this that the ornaments of the Greek architecture were such as might be expected in imitations of wood. The roof was supported by two beams meeting on the top, and the triglyphs were the ends of those beams projecting at the side. The Romans introduced the arch, and in addition to that, the laying of one tier of building above another. They introduced the different stories. The Coliseum exhibited three different orders of architecture—the Doric, the Ionic, and the Corinthian, above each other, each perfect in itself, and each the order of a separate story. The orders were the same as the Greek, but they introduced an arch between the columns, and put the Doric below, the Ionic in the middle, and the Corinthian on the top. The reason was, that in a city of such magnitude as Rome, ground was of such value that they could not afford to spread out their edifices as the Greeks did, or as was done at Pompeii, where there were no edifices higher than that room. The Gothic architecture was neither an imitation of the Roman, Grecian, nor Egyptian; but its principle was the imitation in stone of willow rods. No one could look at a Gothic cathedral without seeing that the ornaments, down to the minutest description, were all imitations of willow rods. It resulted from that, that the roof of the Gothic architecture must be entirely different from that of either the Roman, Egyptian, or Grecian. The Gothic architecture necessarily involved a lofty roof to close in those arches formed by binding the willows together. There was another style of architecture not much known in this country, but which prevailed more widely than any other, and that was the Saracenic, and the principle of that architecture was the tent. Now, he suspected, as these were the obvious principles of the different styles of architecture, the cause of failure was not attending properly to the principle upon which each style was formed. He apprehended the Greek architecture was the one, of all others, best adapted to public edifices, where we only required a single room. (For a church, the Gothic architecture was the one peculiarly adapted.) The Parthenon, the temples of Theseus and Ægisthus, were so many models of perfection that would never be exceeded in edifices of that sort. Accordingly, this style had been attempted in our own country with eminent success. He never saw the buildings on the Mound, at Edinburgh, without thinking how admirably adapted the Greek style was for a single room. There was another style required in cities—the architecture of what we call tenements. For that it had been his decided opinion for many years that no style was better adapted than the Roman, as carried out in the Coliseum and the buildings of Venice. Each story should have its own appropriate ornament: there should be a bar between each story with the ornaments appropriate to its style. But where this style of architecture was adopted we must have the upper story the highest, and a flat roof, and nothing but a balustrade on the top, for a roof on the top of this style was inconsistent with its style, and never failed to injure, if not destroy the effect. The principle of houses in the country was quite different. There, there was no pressure for room. If a man were to build a Palladian front in the country, every one would see the impropriety of it, subjecting the inhabitants to the inconvenience of going up stairs. For country houses the proper style was either the Abbey-Gothic style, or it was the Grecian style with open colonnades. But if we came to have Grecian columns in the outside of a building, it was necessary that the columns should be entire columns, and should be in front of the edifice, and cover a certain space, being the colonnade intended to afford a walk sheltered from the sun in warm climates. They should not be ¾ columns applied to the building. This style was taken from the habit in warm climates of having a space sheltered from the sun and the rain. If we had the columns in front of the edifice, then we had a shade between the columns, which gave the effect of Greek architecture; whereas, if they were applied to the building, then they gave no shade at all, and there was no use of them. He would here mention, in particular, as the finest existing specimen of this style, the famous colonnade of the Louvre. The Madeleine and all the public edifices of Paris had these colonnades. How beautiful was the effect of the colonnade at Hamilton Palace! It was quite suitable, in connection with them, to have pilasters at the side, corresponding with the style. In regard to the Elizabethan style of architecture, so much used in the country, no style was better adapted for edifices of that sort, and it was great matter of congratulation that so many buildings of that kind were going up in every part of the country. The principle being irregularity, any one addition did not disfigure the symmetry of the building, but rather the opposite. In regard to the Gothic architecture, there were two

* In my notice (in your last number but one) of the accidental errors in Mr Petit's remarks on the abbey kitchen at Poole vault, I was, as Mr. Petit says, under some misapprehension from not knowing when I wrote that he had illustrated them with sections, &c. which I learned after I had sent you my remarks I am not aware, however, that this led to any error, beyond my saying that no allusion had been made to the pyramidal roof for which I beg to apologise. The points which I wished to correct, viz. that the building was a kitchen, not a chapel; that the apses are on the side of the octagon rather than at a side, and that there was no difficulty in somewhat complex construction, are not affected by it; and as these all bear upon the utilitarian qualities of the structure, I thought it might be well to point them out, though the subject is of little importance. I regret that Mr. Petit's paper should be thought long. I must, however, add in self-defence, that the question of the merit on of these apses is "not merely one of words," as, with the exception of external appearance, the evils of one arrangement are avoided, and the advantages of the other attained; and Mr. P. will find that he referred to construction, stability, and convenience, as well as appearance. What I wished to point out was, that the complexity of the construction (which I dare say was needless) did not arise from any misplacement of the apses, they being placed as Mr. Petit stated that they ought to be. J. G. S

most important observations to be made. It was the very reverse of the Grecian. The roof was not only an improvement, but a necessary part. It was as great a deformity in it not to have a roof as in the Grecian architecture to see one at all, because the principle in the Gothic was to have high columns going up, terminating in a lofty aisle. Of course, the aisle must be covered on the outside, and we must use the roof; and the higher the roof the more beautiful the building. The freemasons who built these cathedrals possessed architectural taste in no ordinary degree. They put flying buttresses and pinnacles, which concealed the uniformity of the slate or stone roof, and made it an additional beauty instead of a deformity to the edifice. In regard to the sides of the building, the Gothic architecture was a style in which the ornaments, being the imitation of the willow-wands, must be very minute, exquisitely beautiful when seen near, but invisible at a distance of 200 yards. But the Gothic architects, being aware their ornaments could produce no effect at a distance, constructed the building itself in the form of a cross, the effect of which was, that the light of the sun, wherever it fell, was sure to throw a great mass of shade beside it; and thus, in the language of Scott—

"Buttress and buttress alternately
Seemed formed of ebon and ivory."

And, let it be seen at the distance of fifty miles, it was still a most impressive object. Any person going to Westminster-bridge, and looking at the front of the Houses of Parliament, though above a million sterling had been laid out on them, would see that the effect of the front to the river below the roof was a decided failure, for want of the cross part of the edifice, or lateral chapels or flying buttresses. These were not wanted in the Grecian style. A row of columns, 60 feet in the shaft, would be a most magnificent sight. The shadow between them would of itself charm the eye at any distance. If the Temple of Diana at Ephesus were, by Aladdin's lamp, removed to that place, everybody would be fascinated by the spectacle. In the Cathedral of Cologne, where there were plenty of projecting parts, there every one would see the success of the principle. Great also is the effect derivable from statues upon grand pedestals, and also from public fountains. He needed not tell the meeting what was the effect of fine statues. A statue, independently of its own beauty, formed a foreground, and added immensely to the beauty of the adjacent building. A traveller to Munich, Parma, or Berlin, found a statue in the vicinity of every public building. The fountains in Trafalgar-square had often been laughed at, but if not perfection, they are at least a step in the right direction. They are not so fine as those in front of St. Peter's at Rome, but he wished we had some more of them. But if any person doubted the effect of these fountains, he had only to go to Sydenham and see the fountains at the Crystal Palace, which, in point of beauty and height, far exceeded any he ever saw on the continent. They were 100 feet higher than those at St. Cloud, and also higher than those at Versailles. What would it be if we had such fountains playing up in the centres of all our great squares, and then flowing down in all directions in granite conduits, diffusing health, coolness, and cleanliness in every direction!

THE BRITISH INSTITUTION.

IT is much more pleasant to praise than to find fault; but, as the truth must be told, the present exhibition of modern works of art in the gallery of the British Institution is not a good one. It contains a number of quite worthless pictures, and very few works of great merit. The two pictures of highest class are Sir George Hayter's "Martyrdom of Ridley and Latimer" (No. 60), and Mr. Louis Haghe's "Choir of the Church of Santa Maria Novella, Florence (148); but neither of these will do much to advance the reputation of the painters. The first is disfigured by a heavy, untruthful sky (as if after the burning, by the way, rather than before it), and general feebleness; and the second, although painted in parts with great power, is wanting in sentiment and feeling, to say nothing of the doubtful perspective of the right side of the apartment, and is altogether inferior to those fine works in water-colour which have made Mr. Haghe's name famous. Mr. Ansdell exhibits an excellent specimen of his art, called "Severe Weather" (16), in which the rams, life-size, are wonderfully well painted. Mr. Buckner's "Roman Piper" (177), and some of his other pictures; "The Cradle," by Deane (74); "Little Gretchen," by H. Le Jeune (246); Mr. Hardy's "Dinner-Time" (402), and "An Interior" (491); and "Maternal Love," by G. E. Hicks (395), are very charming pictures. "The Ptarmigan's Haunt" (339) by J. Wolf, is a remarkable work, painted with minute care in the details, and yet not wanting in general effect. Mr. Dearle has several very clever small landscapes, which should be looked at; and in this department, indeed, there is no lack of excellence. We may especially mention "A Scene suggested by the Death of Pompey" (184), by T. Danby; "Winter Evening" (204), by C. Branwhite; "Dunolly Castle" (432) by J. Danby; "Squally Weather off Dover" (520), by John Wilson; and H. J. Boddington's "Close of a Summer-Day" (533). Lance has one of his marvellous representations of fruit (42); and Miss Mutrie's Azaleas (22), and Magnolia (91), will delight all who love flowers.

PROVINCIAL NEWS.

Chesterton (*Staffordshire*). — New national schools have been opened beside the new church and parsonage in the centre of this village. The schools were erected after designs furnished by Messrs. Ward, of Hanley. They comprise the main school, a room 65 feet by 18 feet, infant school, 35 feet by 21 feet, and two class-rooms, containing galleries. Connected with the girls' school are industrial buildings (not yet completed), where the elder girls will have the opportunity of learning household work—such as washing and getting up linen, cooking, &c. There is also a master's house, not yet completed. The schools are so planned that the whole of the area can be thrown together for purposes of a public meeting, lecture, or concert. An effect is produced in the main school by an arrangement of common blue and red quarries round the room to the height of 4 or 5 feet, with a few of Minton's tiles introduced, a gift from that gentleman. The builder is Mr. Booth, of Lawton.

Wells.—Several new buildings are to be shortly erected in or near this city. Besides a new church in the east part of the town, there will be a new banking-house in high-street, and a new paper-mill of some extent at Wookey Hole.

Liverpool.—This thriving town is ever on the change with building improvements. "Almost every week," says the local *Times*, "it is our pleasing duty to record the downfall of old habitations to make way for the erection of handsome new buildings. These spirited endeavours to improve our street architecture have been mostly effected in the immediate neighbourhood of the Exchange, and, in the majority of cases, by private individuals. Water-street, Brunswick-street, Oldhall-street, and Dale-street have been, and are, undergoing the greatest changes. The lamentations of our contemporary, *The Builder*, over the cheap spirit of the age, which tempts people to try for how low a sum they can have a pile erected—with high architectural pretensions—does not apply to the recently-erected commercial chambers in this town, which possess, in an eminent degree, the four principal requisites,—strength, beauty, durability, and comfort. Many of them are fronted with stone, while the others are generally of red brick and stone dressings." Public improvements also progress apace. The pile of buildings on the south side of Dale-street, as well as those in High-street, are rapidly falling beneath the workmen's hands; and on the north side of Dale-street, from the old Gas-office to Hatton-garden, the shopkeepers are "selling off" previous to the razing of their premises to make way for the erection of new police-offices. In Brunswick-street, Oldhall-street, and Water-street piles of building are rising, and the note of preparation is heard in other parts of the town. This season promises to be a good one for all branches of trade connected with building. The local *Journal* states that the ground near the Town-hall purchased by the London Fire and Life Assurance Company for the offices, for themselves and others, which Professor Cockerell has designed, is said to have cost the purchasers altogether about 70,000*l.* or an average of over 50*l.* the square yard, some portion of it (corner of Dale-street and Exchange-street East) 70*l.* The old materials or buildings were sold week before last by auction to Mr. Williams, builder, for about 520*l.* the lots averaging 130*l.* each. The buildings are said to be in good condition. They are to be cleared away by the 20th March.

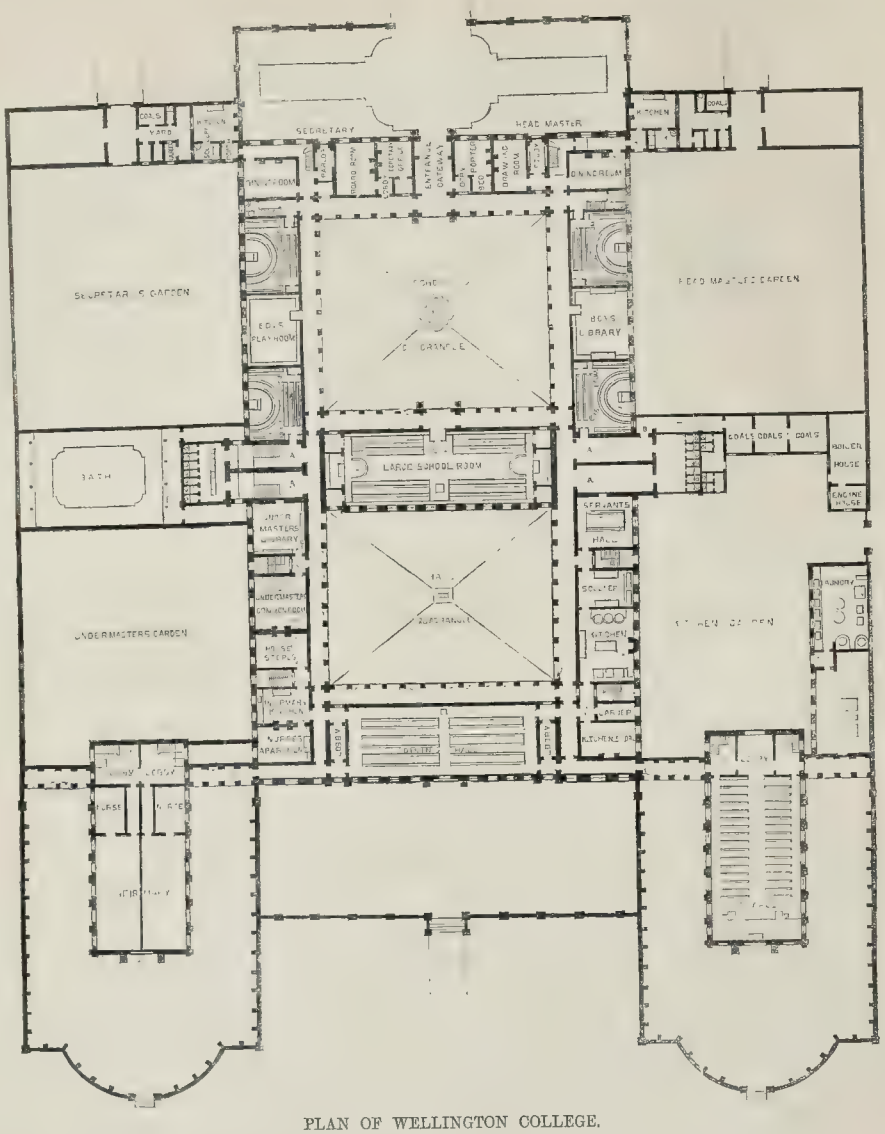
Salford.—The new day-schools which have been erected in connection with St. Simon's Church, were opened on Tuesday in last week. There are large rooms for boys and girls, and a lesser one for infants. The total cost has been about 2,200*l.* of which about 190*l.* have yet to be raised. The cost of land was 389*l.*; contract for building, 1,500*l.*; architect's bill, 100*l.*

Rosedale (*Yorkshire*). — Messrs. Peters and Co. of Newcastle, proprietors of ironstone, have let a contract to Messrs. Forster and Lawton, builders and contractors, Sunderland, to construct a tidal dock at Rosedale, between Staiths and Whitby. The dock will be about three acres in extent.

Glasgow. — The new Procurator's Hall is nearly completed. The keystones to the arches of the basement openings are sculptured masks of well-known celebrities of the bench and bar, including Lords Erskine, Mansfield, Brougham, Blair, Stair, Kames, Forbes, Reddie, Millar, Moncreiff, Jeffrey, Cockburn, and Rutherfurd.

THE WELLINGTON COLLEGE.

AMONGST the many honorary and monumental erections of all kinds and degrees of merit that the admiration of his countrymen have raised to the memory of the Duke of Wellington, none has taken the beneficial and permanent form that is proposed to be carried out in the institution which we this week illustrate,—an institution which is the result of voluntary subscriptions entered into under the highest patronage on the occasion of the Great Duke's death,—and which seeks to benefit the living while it honours the illustrious dead.



It is intended to devote the college for the education of the orphans of officers of her Majesty's army, and of the army of the Honourable East-India Company: these it is proposed to divide into three classes, admissible at rates of payment varying from 10*l.* to 20*l.* per annum.

The governors having obtained a site, consisting of 132 acres, in the parish of Sandhurst, near the town of Wokingham, in the county of Berks, situate on the Reading and Reigate Railway, and about ten miles from Windsor, requested Mr. John Shaw, of Christ's Hospital, to furnish them with designs, which being submitted to them, gained, we understand, their unqualified approval.

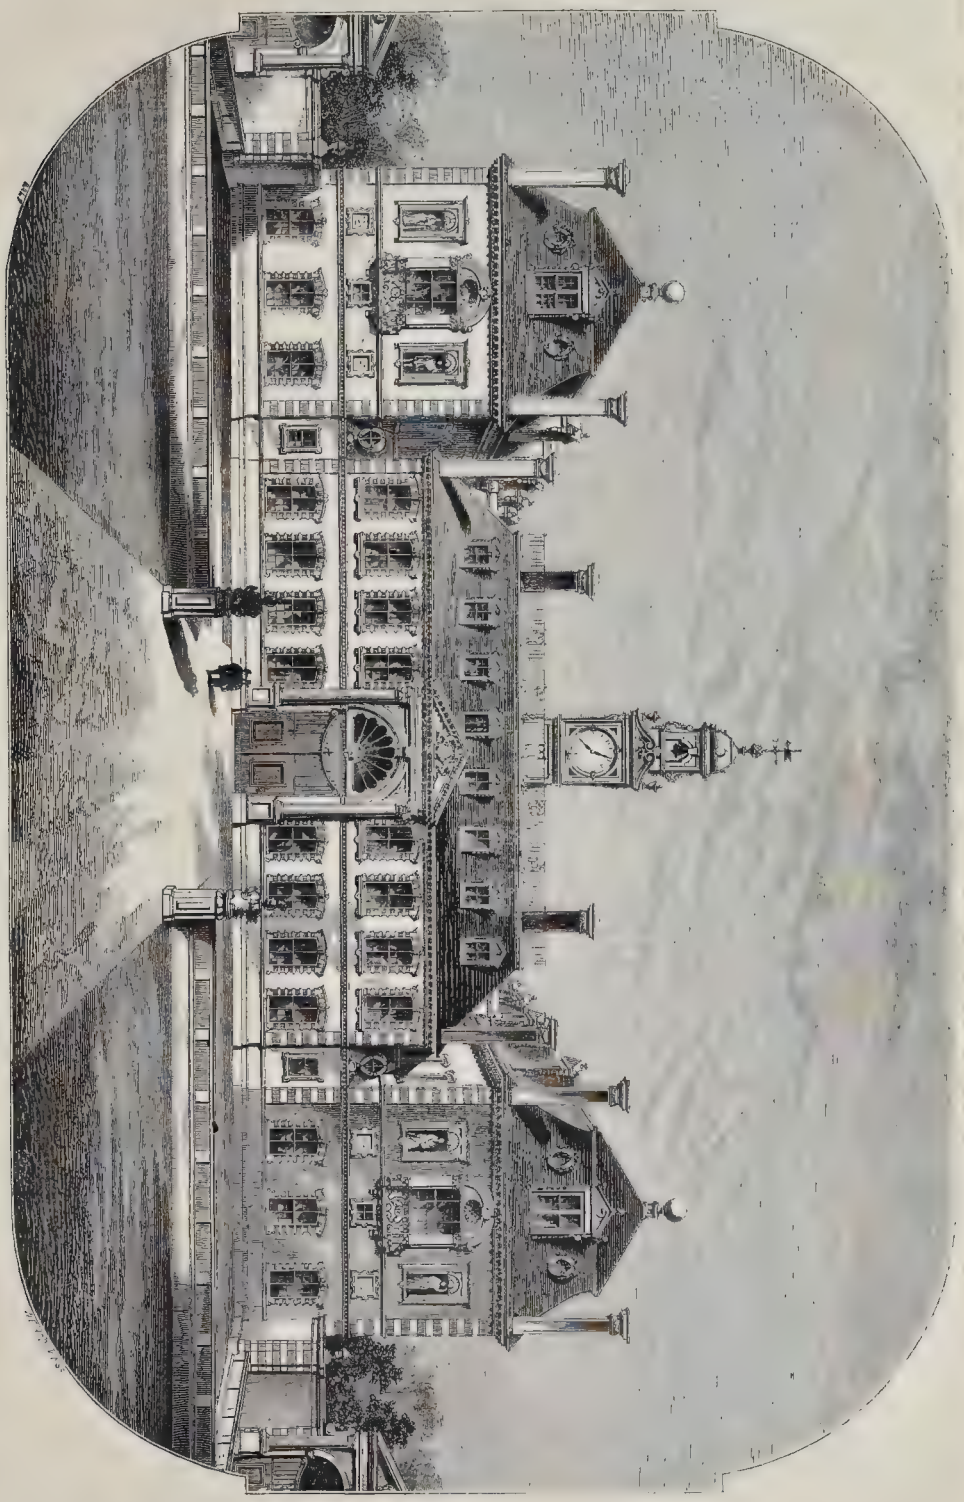
The college, as designed, will consist of two quadrangles, each surrounded by arcades, so as to afford perfect communication under cover. The northern or entrance front, shown in our engraving, contains, right and left of the entrance gateway, the apartments of the head master and the office, board-room, and the apartments of the house-steward. The first, or school quadrangle, has on its north side the buildings specified above; on the south side the great school-room; on the east side are two class-rooms or studies, with the boys' library; and on the west side two other class-rooms, with a boys' day-room. The second quadrangle has the great school-room on the north, and the dining-hall to the south; on the east, the servants' hall, kitchen, scullery, larder, and stores; and on the west, the undermaster's common room and library, with other apartments. The mezzanine in this quadrangle contains on the east side the house matron's apartments and stores; also the sleeping-rooms for the female servants; on the west side are the bed-rooms of the undermasters and those for the men-servants. The two upper floors of the east and west buildings contain dormitories for the pupils, who, to the number of 246, are provided with separate berths, each 10 feet by 7 feet, wherein each has his bed and ample accommodation for clothes, washing, and writing.

The buildings are to be erected of brick, those for the facings being picked of a uniform dark red colour: the dressings of the windows and quoins are to be alternately bright red brick and Box stone: the other ornamental portions, such as strings, &c. are to be of the same stone.

The contract being offered for select competition, resulted in the following tenders for the

PLAN OF WELLINGTON COLLEGE.

erection of the main body of the building, as described above, with all its enclosing walls and detached offices.



Haward and Nixon	£45,710
Cubitt and Co.	45,125
Piper	43,600
Lucas	42,026
Mansfield and Son	41,175
Locke and Nesham	40,471
Myers	38,127
Pearce and Gurrier	37,810
Kelk	36,865
Holland	36,175

From various causes, the tenders, though received near the middle of last year, and that of the Messrs. Hollands accepted, did not lead to the immediate progress of the works, which were deferred to the commencement of this year, but the builders are now busy on the site, and will soon show the extent of the buildings at present contracted for.

The design contemplates the erection of an infirmary and chapel, in advance of the main south front, but connected with it by arcades. These, however, form no part of the present contract; the funds that are applicable for building purposes not being at present sufficient for embracing the whole design.

The water supply is in the able hands of Messrs. Easton and Amos, and the heating and ventilation in those of the Messrs. Headen, of Trowbridge.

The site is worthy of a few words, having been selected by his Royal Highness Prince Albert, to whose judgment it does credit, being at once elevated, yet sheltered, and having an extended view to the south-west, reaching to Strathfieldsaye, the national gift to its great name-patron. The soil is a sandy gravel, dry, and admirably adapted for the purpose it is to be applied to, while the extent of the estate will afford many points for effective treatment, not the least of which will be the formation of a handsome sheet of water, for which purpose a special quantity of twenty acres were allotted by the prince; thus securing life for the landscape in lieu of a marsh at present existing on that particular spot.

WELLINGTON COLLEGE, SANDHURST.—MR. JOHN SHAW, ARCHITECT.

CHURCH BUILDING NEWS.

Wheatley (*Oxford*).—The foundation-stone of a new church for Wheatley parish was laid by the bishop of the diocese, on Tuesday in week before last. The old edifice had latterly indicated signs of decay, and Mr G. E. Street, the diocesan architect, inspected it, and reported to the effect that there was ground for anxiety as to the state of the building in a few years, if allowed to remain. For this and other reasons it was resolved to erect a new church on another site. Besides the value of the materials of the old church, a sum of nearly 1,500*l.* was raised towards the requisite amount; and the promoters of the undertaking commissioned the architect just named to prepare plans for the work, and entered into a contract with Mr. John Castle, builder, for its completion. The style of the new church will be Decorated. It will be built of stone, and surmounted by a tower and steeple, which, however, will not at present be erected. Its dimensions will be:—nave, 51 feet 4 inches, by 47 feet; chancel, 31 feet by 16 feet; and it will accommodate 412 adults and 99 children—total, 511. It will be dedicated to St. Mary. As the materials of the old church are included in the contract, its demolition has already been commenced. The sum of between 500*l.* and 600*l.* is still required for the building fund.

Barton.—The ancient church of St. Peter's has been enriched with the addition to the chancel of a stained window, representing the Resurrection and Ascension of our Lord. It is the gift of Mrs. Uppleby, of Bardney Hall, in memory of the late vicar, the Rev. George Uppleby. Messrs. Eddie have signified their intention to erect, in the same building, a new organ, in memory of their late father. It is also intended to erect an organ, by subscription, in St. Mary's church. The instrument is now being built by Messrs. Foster and Andrews, of Hull, and will cost about 180*l.*

Whetstone.—For some years past, the tower and spire of Whetstone Church were in a very dilapidated and dangerous condition, but these portions of the edifice are now restored. The architects were Messrs. Parson and Dain, and the builders Messrs. Lindley and Firn. The outlay has been 700*l.*

Thorley.—The ancient church of St. James, Thorley, has recently undergone a process of restoration. The Norman doorway, south entrance, and sedilia, two piscinæ, and an ancient staircase, have been restored, and a five-light east window has been put in. The remainder of the building has been extensively repaired.

Broadwater (*Sussex*).—Another stained glass window has been executed by Messrs. Gibbs, for Broadwater Church, and put up in its place. The work is the gift of Mrs. Ann Thwaytes, of Charman-Dean.

Wells.—The pews in St. Cuthbert's Church are to be altered; and a new church is to be erected in the east part of the town.

Cheltenham.—A serious accident lately occurred at St. Mary's Church, here, by the giving way of a large portion of the ceiling over the reading-desk. Mr. H. Dangerfield, the Borough surveyor, was sent for by the churchwardens to examine the ceiling and roof, and reported the former to be in a very dangerous and insecure state, so much so that it would be absolutely necessary to close the church for some time. The laths were completely rotten, as well as the rafters.

Ludlow.—The ancient glass in the old church of Ludlow is being cleaned and repaired, by Mr. Evans, of Shrewsbury; and two windows are completed. Unfortunately, in the north and south windows but little glass remains perfect: the lights already completed on the north side are St. Barnabas, St. Leonard, St. Appolonia, St. George, St. Catherine, St. Ellena, an English Queen supported by angels, and the Virgin and Child. The work of restoration is proceeding in other parts: the reredos has been restored and enriched with colour by Mrs. Rattee, of Cambridge.

Chester.—Messrs. Gibbs have just obtained in a competition with various others, the contract for an east window to St. Bridget's Church, Chester, to be erected in memory of the late rector of that church.

Stafford.—The consecration of the portion of the cemetry connected with the Church of England, for the parishes of St. Mary and St. Chad, took place on Thursday before last. The cemetery is four acres in extent; but, according to the local *Advertiser*, it is too small. The chapels were originally designed together, but are separately erected. They are built of freestone from neighbouring quarries, the face of the external walls being axed and drafted, and set in small courses. The interior of the chapels is open to the roof. The rafters are framed diagonally. The whole partakes of an Early English character. The registrar's lodge is of brick, with stone dressings, having Gothic-headed windows to harmonize with the chapels. The whole of the works have been erected, at a cost of 1,770*l.* by Mr. C. Espley, from designs and under the superintendence of Mr. C. Trubshaw, of Stafford, architect. The grounds have been planted with ornamental shrubs, under the management of Mr. Sandy.

Batley.—The foundation-stone of a new Congregational Chapel, has been laid here. The chapel will be in the Gothic style, and will accommodate a large congregation, who intend to convert their present chapel into a school building. The designs for the new chapel have been furnished by Mr. M. Sheard, jun., of Batley, architect.

THE CLOCK AT THE HOUSES OF PARLIAMENT.

The proceedings connected with the intended clock at Westminster are not regarded complacently by some of our correspondents: all sorts of unfairness are complained of, but we are not in a position to say that the case is made out. One remarks that "the faces are so arranged (although of immense size) as to be perfectly useless for the purpose of distinguishing the time (even to a person standing in Palace-yard)," and asks "if it be true that the clock is made of cast-iron?" He further complains that the matter is now wholly in the hands of *one* gentleman, Mr. Denison. Another writer says all the English bellfounders have been insulted in connection with this clock, and is surprised they should be so quiet under it. Are we to believe that we are travelling backwards on *all* roads?

CRYSTAL PALACE.

The Directors of the Crystal Palace are about to extend their sphere of operations to the illustration of Art as allied to Manufacture, and with this view have determined upon the foundation of a Ceramic Court as an experiment, which, if attended with success, will be followed by a series that shall eventually represent the productive power of the principal manufactures of England.

With reference to the initiatory step, it would be superfluous to enlarge upon the interest which will attach to a collection of rare and valuable objects, illustrating the beauty and variety of a manufacture with which Art formed so early and intimate an alliance, and which presents, through all its details, a combination of Science and Art without a parallel in the whole range of industrial action. The national importance of our potteries, in a commercial point of view, is not yet thoroughly appreciated. They call into exercise important powers of chemical analysis and mechanical ingenuity, and they develope artistic faculties to an extent and with a fitness certainly unequalled in any other branch of manufacture. The nature and extent of their own commercial resources, for without such a knowledge they can never properly appreciate their national interests.

The proposed exhibition has been confided to the direction of Mr. Thos. Battam, and will contain a large collection of Plastic Art, from the earliest dates of its invention down to the present time.

We understand that the directors have elected Mr. James Fergusson to the office of general manager of the Crystal Palace. Mr. Fergusson is well known to our readers by his various works on the fine arts, and on architecture: what his particular views may be as to the Crystal Palace we do not know, but there is no doubt if he brings his mind to bear upon the subject, advantages will follow. That a *good* manager is needed at the Crystal Palace has too long been evident.

Railways in Ceylon.—A company has been organized for the introduction of railways into Ceylon. Their capital is 1,000,000*l.* in 50,000 shares of 20*l.* each, the first deposit being 1*l.*

ROYAL INSTITUTE OF BRITISH ARCHITECTS.

At the meeting of the Institute on the 28th ult.,—M. Penrose in the chair,—Mr. G. B. Williams was elected as Fellow.*

The discussion on the paper read at the last meeting,—"Remarks on the Forms, Methods of Casting and Ringing of large Bells," was resumed. The evening was chiefly occupied by an address from Mr. E. B. Denison, the substance of which we give below.

The chairman announced the decease of Mr. G. T. Andrews, Fellow, and of Mr. Mountford Nurse.

On Monday evening, the 11th instant, the discussion on the subject of bells was resumed.

The following gentlemen were elected:—Mr. G. Vulliamy, as Fellow; Messrs. H. R. Fricker, G. Low, and F. Warren, as Associates.

MR. E. B. DENISON ON BELLS AND THE MODE OF RINGING THEM.

From various experiments I have come to the conclusion that bells of the common and well-known shape, with a thick lip or soundbow, are the most effective known instruments for producing a loud and musical sound, such as you want when you erect a large public clock, or put up a peal of church bells. And I confess also, that after trying at Messrs. Warners', a number of experiments with bells of the usual general form, but with various deviations in the details, I am equally satisfied that there is nothing to be gained by deviating materially from the established proportions of the best old bells. And I think it is some confirmation of my views to tell you that Professor Wheatstone having been commissioned by the Board of Works, with Sir C. Barry, on his own suggestion, to collect information at the late Paris Exhibition, "respecting the most esteemed chimes in France and Belgium, and whether there are in those countries makers acquainted with the traditions of the art, or who have applied the discoveries of science to the improvement of bells, or to efficient substitutes for them," has come back with the conclusion that no such efficient substitutes have been discovered, nor is there any known improvement on the established mode and materials for casting them. Sir C. Barry and he, indeed, seem to have been rather impressed with the merits of the cast steel bells which you may have seen noticed in the newspapers. I have not heard them myself, but I have heard such decided condemnation of their harshness of sound from other persons of probably more experience in such matters, that I do not the least believe in their being received generally as an efficient (though they may be a cheap) substitute for the more expensive compound of copper and tin; and, on the whole, that seems to be Professor Wheatstone's opinion also.

But although I have thus satisfied myself that the common form and material of large church and clock bells, such as we want at Westminster, are substantially the right ones, there still remains a great deal to do to ascertain the more precise details of form and composition which will produce the best sound out of a given quantity of metal. And here I considered that we had to begin at the beginning, and it is hardly an exaggeration to say, that instead of presuming that anything is right because we now find it in use among the bell-founders, it is rather safer to presume that it is wrong. That there is something very far wrong somewhere in the modern style of casting bells, and especially large bells, is manifest from this—that everybody who has paid any attention to the subject, complains of the lamentable inferiority of modern bells to old ones, and even to bells made in the early part of this century. Let me quote again that same letter of Professor Wheatstone's to the Board of Works, with reference to this subject:—"The very unsatisfactory result of the chimes constructed for the Royal Exchange, which have been twice re-cast, without any ultimate advantage, shows that no known bell-founder in England can be relied

* At the previous meeting the following gentlemen were elected:—Messrs. W. J. Smith and G. Morgan, as Fellows; Messrs. H. Prior, C. Saunders, and J. Edmeston, jun. as Associates.

on." And then he makes the suggestion which I quoted just now. I know perfectly well that the makers of all these three unsuccessful peals of large bells (two of which were cast by Mr. Mears, and the third by Messrs. Taylor, of Loughborough), can produce volumes of testimonials to the excellence of their bells. But I have seen rather too much of testimonials to pay much regard to them, whether they relate to bells, clocks, or morals. To say nothing for the present about the two latter articles, I have heard people describe bells as "very fine," which I would not buy at a penny a pound, except for the purpose of selling again at ninepence. As for the opinion of musicians, as such, I value it rather less than that of other people, because I have always found that the first and almost the only thing they look at, is whether a peal of bells are in tune with each other, the least important part of the business, for two reasons,—first, because if they are out of tune (unless very atrociously), they can be cut into tune; and, secondly, because a set of iron saucepans could be made as perfectly in tune as the finest peal of bells. And with regard to single bells, where the question of tune does not arise, still, unless a man knows by experience what kind of sound a certain weight of bell-metal ought to produce, it is impossible that his judgment can be worth anything on the merits of any particular bell. Most Oxford men believe their Great Tom is a very fine bell, just because it makes a loudish noise, and they have no idea, and cannot have any, whether it is either the quantity or quality of noise which ought to come out of a bell of 7½ tons. Whereas, I know that a *good* bell of half that weight would give a much louder and a much pleasanter sound, and that, in fact, the bell is about as bad as possible. I mention that, because it is not a modern one, having been cast in 1680; and because the *occasional* occurrence of bad old bells, and also of good modern ones, proves that the general badness of the modern ones, compared with the general goodness of the old ones, is not to be accounted for by the hypothesis that they improve by age; though it is true, that they generally do improve a little for a few years. Without saying that any of the modern large bells, such as those of York, Lincoln, and Montreal, are quite as bad as the Oxford bell, they are all very far short of what they ought to be, and very inferior to the *old* Tom of Lincoln, which was cast in 1610, and was considered the finest large bell in England, as I can easily believe from the density of the metal, of which I have a piece, and I shall say more about it presently.

It has been stated in substance by the founders of the two first condemned Exchange peals, that the second of them at any rate must have been good ones, because they (or most of them) were cast from the same *sweeps* or patterns as the celebrated Bow bells, which were cast by the predecessors of the same firm in the last century; and, indeed, they say the same of many others of the modern peals which people are stupid enough to pronounce very bad. I am rather inclined to think that this identity of shape, together with the inferiority of sound, which is manifest to everybody except the founders, proves something very different, viz. that they have forgotten the traditions of their own art and of their own house; and as the quality of bells cannot possibly depend on more than these three things—shape, metal, and casting, and they themselves tell us that the shape is the same, they leave us no other solution, except that they use bad metal, or have lost the art of casting it properly, or both. That some of the modern bells are unsoundly cast, I can say positively, because I have seen the metal full of holes, which are sometimes visible on the surface, but sometimes, and I suspect more frequently, invisible until the bell is broken. The larger a bell is, the more likely this is to happen, as it is well known that thick castings are harder to make sound than thin ones; and that is an obvious explanation of the fact, that the large bells of modern times are even worse than the small ones. Now, it luckily happens, that we have a ready means of discovering whether a bell is both soundly cast and of good metal, by simply taking its specific gravity for the soundness, and analyzing a piece of it for the purity. You may file off enough from any bell to enable a chemist to analyse it, and see whether it contains any baser (*i. e.* cheaper) metals than copper and tin. And we know what the specific gravity ought to be: the old Lincoln bell was 8·78, and the old Doncaster bells (of 1722, not 1835, for some of the latter I know were unsound) were 8·76: the French authorities on the subject, I find, put it as high as 8·82, and from actual experiment. It is remarkable that there is scarcely any difference between the specific gravity of the alloy, whether it contains the largest or the smallest proportions of tin to copper that are ever used; because, though the tin is much lighter, it makes a denser compound with the copper until it reaches the proportion of speculum metal, about 1 to 2; whereas, bell-metal never has more tin than 1 to 3, and the modern bell-metal not so much as 1 to 4, because it is only put in in those proportions, and some of the tin always wastes in melting. The rule for getting the specific gravity is so simple that I may as well give it. Suppose the weight of the bell is A, then weigh it in water (taking care that it is both filled and submerged), and call that weight W; then the specific gravity $= \frac{A}{A-W}$; which ought to be 8·75 at least. With regard to the best proportions of tin and copper I am not able yet to state any certain conclusions. The fact, however, is, that the old Lincoln bell contained rather less than ·75 of copper, and the rest was tin ·20, and antimony, and a very small quantity (no doubt accidental) of nickel, with what the chemists call mere traces of some other metals. There was, some years ago, a fashion of putting antimony into speculum metal, but it seems now to be thought better to fill its place with tin. No antimony is found in the old Doncaster bell-metal, nor, I understand, in that of the old York bells, in which the proportion is 1 of tin to 3 of copper, as in the Lincoln bell it is about 1 of tin and antimony together to 3 of copper. I find also in a French book on alloys, three authorities for 1 of tin to 3½ of copper, others for 1 to 3, but only one for 1 to 4. I will just caution you against confounding 1 *to* 4 with 1 *in* 4. Remember, that if the tin comes out on analysis one-fourth of the whole, or ·25, it means that the tin is not one-fourth, but one-third of the copper. I mention this, because I have constantly found people confound the two things in other matters besides bell-founding. The bell-founders do not like this *high* metal, as it is called, because it is harder to cut if the bells require tuning; but they have no business to want tuning, and never do when they are cast of the proper thickness for their size. If the high metal is the best, that is a singularly bad reason for not using it. So far as I have yet been able to judge from experiments, I am of opinion that it is the best, for the more the tin is reduced below the point where it would make the metal too brittle, the less time the bell appears to hold the sound when it is struck. Lord Rosse adopted a multiple of what are called the atomic or equivalent proportions of tin and copper in his great speculum, which are 59 and 32 very nearly; and from some facts which Mr. Dent has told me about different compositions for chronometer springs, and other experiments, there seems reason to believe that there is some advantage in keeping to the chemical equivalents. At any rate it can do not harm, and you will find that 4 of tin to 13 of copper does give very nearly the ratio of 59 to 6 × 32, and it certainly produces a very hard, and elastic, and strong bell-metal, very like the Lincoln bell in appearance.

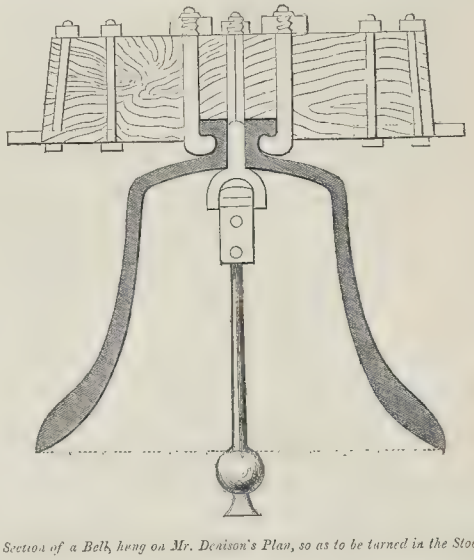
I have not time to enter into the details of casting, nor is there any occasion for it. I have told you how you may ascertain whether any given bell is made of sound bell-metal; and if the bell-founders are made to understand generally, as Messrs. Warner do with regard to the Westminster bells, that their bells will be rejected if they are not made of sound bell-metal of proper density, they will take very good care that they are. I will, however, just mention that Lord Rosse's method of getting a sound speculum, by casting it on a cold bottom, would not do for bell-founding; for you will see at once that a thing of the shape of a bell cannot cool in layers like a flat speculum of uniform thickness. What we want is a method of keeping the metal in the upper part or waist of the bell hot and fluid as long as possible, so that it may keep falling down into the sound bow or thick part as the metal cools there. Moreover, copper and its alloys of tin have this remarkable property, that the slower they are cooled the harder and denser they are. A bell-metal bullet, cast in a cold mould and thrown into water as soon as it is solid, is quite soft and stringy inside, though very smooth outside, compared with one cast in a hot mould and cooled as slowly as possible; indeed, they are so different that you would suppose the latter had twice as much tin in it as the former, if you did not know their history. Mr. Varley tells me, that some copper cylinders for printing were cast of even greater density than hammered copper, by forcing the metal down into the runner or "git" with a piston heavily weighted. Messrs. Warner's plan of casting bells from iron cores and copes, coated only with the loam, seems to offer great facilities for this forcible mode of densification.

But there is another cause of the inferiority of modern peals of bells, which is still more easy to judge of and to get rid of, if you choose. It was noticed in a short paper on bells in the Ecclesiologist, vol. XIV. that less metal is now used to produce a given note than in the old bells. Of course, if the result was equally good, that would be a great proof of the skill of the modern bell-founders. But unfortunately, the result is very bad. I do not think, however, that they are so much to blame for it as the public, who in this, as in everything else connected with building, are always demanding grand effects out of insufficient means. At the same time, as the bell-founders seem rather disposed to humour than to correct the public ignorance on this point, I will try at any rate to make you understand this fallacy. First of all then remember, that any musical note can be got out of any weight of metal. You may get a note an octave or two deeper than the E flat, which I expect our great Westminster bell to be, out of fourteen ounces just as well as fourteen tons of bell-metal, if you only make it thin enough. And on the other hand, we could have those fourteen tons of metal cast into a bell with a note one or two octaves higher, if we only made it small and thick enough. In the former case you know, we should have a bell that would be scarcely heard at the distance of ten yards instead of ten miles; and in the latter, the mass would be too thick to be put into musical vibration at all, and it would give very little more than the mere sharp noise of a blow. Somewhere between these limits necessarily lies the thickness and shape of a bell which will give the best sound for its weight: if you make the bell larger and thinner than that best form (whatever it is), you lose in power and quality of tone, though you increase the depth of note; and if you make it smaller and thicker, you raise the note, and when you get beyond a narrow limit, you lose in power too, because the bell becomes too thick to be made to vibrate throughout. Now, I am quite satisfied, and I believe it is generally acknowledged, that the most effective proportions for a bell are where the thickness of the waist is about $\frac{1}{8}$th, and that of the sound-bow about $\frac{1}{7}$th of the diameter. And these proportions will, of course, give one definite and ascertained note, and no other, for any bell of given weight and shape. The tenor at Bow, for instance, is C, and weighs fifty-three cwt. But Messrs. Taylor have made the tenor of their new peal at the Exchange, of the same note, with only thirty-three cwt.; and in some other peals which I have seen, they have deviated still further from the old proportions, for they carry this system even further than the other bell-founders. Again, it is a law of mathematical certainty, that if you make eight bells of any metal and any shape, provided only they are all of the same metal and proportions (*i. e.* the thickness varied in proportion to the diameter), and of dimensions in this ratio—30, 32, 36, 40, 45, 48, 60, they will give the notes of the common diatonic scale; and, in fact, be a peal of bells in perfect tune with each other. Moreover, their weights will vary as the cubes of the diameters, or the tenor be eight

times as heavy as the treble. But in practice it is found expedient to make the two or three smallest bells, especially the treble, rather thicker and heavier in proportion, and within moderate limits there is no objection to it. For instance, in the grand old peal of Exeter Cathedral, the tenor is sixty-seven cwt.; and the third of the ten is rather more than one-seventh instead of one-eighth of that weight. But in modern peals, you will be lucky if you get a tenor of eight bells more than four times as heavy as the treble, or the tenor of six more than double of the treble, though it ought to be nearly four times as much, even allowing for a little increase of thickness of the treble. Now, when you have not only inferior casting, but this system of spoiling all the large bells of a peal by thinning them besides, you need not be surprised at the universal complaints of the badness of modern bells. The remedy for this is simple enough: stipulate that no bell in the peal is to be thinner in the sound-bow than $\frac{1}{24}$th of the diameter, and this defect will disappear at once; only in that case people must give up making the absurd demand upon the bell founders to give them a peal of bells in E for the money which will only buy copper and tin enough for a peal in G. When the specification was issued for the Westminster bells, one of the bell-founders wrote to ask what note Mr. Denison intended the great bell to be. I answered that Mr. Denison intended the bell to be of such note as it might turn out to be when made of the proper size and thickness to produce a good bell of 14 tons. I expect that note will be E flat; but I cannot say positively that it will be lower than E, because I have not yet quite determined the exact proportions which seem to be the best, by casting experimental bells of a quarter of the size, or $\frac{1}{64}$th of the weight, and consequently just two octaves higher. The third quarter bell will be the octave above the great bell, and therefore half the size and $\frac{1}{8}$th of the weight. You will find the order and construction of the chimes, and of the clock itself, in the Treatise on Clocks, which I wrote for the last edition of the "Encyclopædia Britannica," and which was separately published by Black, of Edinburgh, last year.

This is a convenient place for giving a list of the largest bells in the world, according to the best information I can get from various sources:—

	Weight.		Diameter		Thickness	Note.
	Tons	Cwt.	Ft.	In.	In.	
The great bell of Moscow, broken in 1737	193	0	21	0	23	...
Bell at the Kremlin, fell in 1855	63	0	...			..
Pekin	53	0	...			..
Novogorod	31	0				...
Vienna, 1711	17	11	9	10		...
Sens	15	0	8	7		
Westminster, 1856	14	0	9	2	9	E flat
Erfurt, 1497	13	15	8	7½		F
Notre Dame, Paris, Louis XIV	12	16	8	7	7½	F [only proba-
Montreal, 1847	12	15	8	7	8¼	F
Cologne	11	3	...		..	...
York, 1845	10	15	8	4	8	F sharp
Bruges	10	5	...		...	G
St. Peter's, Rome..	8	0	...			...
Oxford, 1680	7	12	7	1	6½	...
Antwerp	7	3	..		...	...
Exeter, 1675, very thick in the waist..	5	11	6	4	5	A ?
Lincoln, 1835	5	8	6	10½	6	A
St. Paul's, 1709	5	4	6	9	...	..
Ghent	4	18	...		...	..
Boulogne, modern	4	18	...			...
Old Lincoln, 1610 ...	4	8	6	3½		B
Fourth quarter-bell, Westminster, 1856	4	0	6	1½	6	B flat



You observe that the diameter of the Erfurt bell, which is said to be the finest in the world, is less than Mr. Taylor's figures. As both his authority and mine agree about the weight, and this size is given me by a very accurate person, who measured it himself, and it is more consistent with the weight (the bell being a very thick one), I have little doubt that this is correct. Others give also greater sizes and weights for the Notre Dame bell, but these are the figures lately obtained by Mr. Donaldson from M. Viollet le Duc, the architect superintending the works at Notre Dame now, and he has sent a drawing of the actual figure, or sweep, of the bell on a large scale; so that this also seems to me the most likely to be correct.

I must add that the clapper is stated to be of the enormous weight of 23 cwt. or $\frac{1}{17}$th of the weight of the bell, which is about four times as much as I have ever seen suggested for the clapper of a ringing bell, though I lately had one put to a tolling bell of twice the usual weight, with very good effect. But M. Viollet le Duc has fortunately sent the dimensions of the clapper also; and it is clear from them, that the weight which has been given to him is fabulous, and at least three times too much. Even 7 cwt. would make it twice the weight of the clappers of the York and Montreal bells. I suspect ours are generally too small, and I am certain that when the bells can only be tolled, by reason of the weakness of the tower, much larger clappers might be well and safely used, provided the bells are really tolled, and not the clappers pulled against them with a force which depends entirely on the discretion of the man who does it. When the bell is too heavy to be tolled in the common way, the clapper ought to have a separate pulley, not at the side, but in front of the middle of the bell, and so placed that the ringer cannot hold the clapper against the bell. I believe more bells have been cracked by the slovenly practice of tolling by the rope tied to the clapper, than by all other things together, besides its twisting the clapper itself on one side, and deranging it for ringing. This is only one of the many points in which the saving of shillings often entails the waste of pounds, and sometimes hundreds of pounds, as at Doncaster in 1835, where the whole peal was recast at a cost of 300*l.* because the two largest bells had been cracked through mismanagement.

It did not appear to me that Mr. Smith made out a very good case against the swinging of bells. Indeed, as Mr. Barry said the other night, his own experiments were enough to satisfy us at that end of the room (if we had doubted it before), that swinging a bell, or a gong either, does increase the sound considerably. The notion of ringing bells in full swing being modern, and contrary to the intention of those who built our church towers, seems to me to have no shadow of evidence to support it.

* * * * *

I must not overlook the disease of which bells generally die, that is, cracking after the clapper has worn them thin in one place; and I offer you a plan for turning a bell in the stock. You will understand it in a moment from this drawing. It is nothing but a thick round neck

Section of a Bell, hung on Mr. Denison's Plan, so as to be turned in the Stock.

to the bell instead of a crown, with a flange round the top, which is embraced by six bolts coming through the stock. The clapper-bolt runs square through the stock, but round through the top of the bell, and has nothing to do with carrying the weight of the bell. When the bell is worn in one place, you have only to loosen the bolts a little, and then a few of the ringers, standing round the bell, will easily twist it round a little way for the clapper to act in a fresh place. If this is done once in ten or twenty years, according to the work of the bell, it may just as well last 1,000 years as 100, and this mode of hanging evidently need cost not a penny more than the common plan.

SURPLUS FROM PATENT OFFICE FEES.

The subject of patent law reform has just been revived by Sir Joseph Paxton, M.P., in a letter to the present Council of the Society of Arts. In this communication Sir Joseph invites attention to the large and constantly-increasing revenues derived from the fees paid by inventors for letters patent, and to the mode in which they are applied. He states that, in the year 1854, after deducting all expenses, there was a clear available surplus of 15,600*l.*, which was absorbed by the Treasury. He further estimates the present annual surplus at 60,000*l.* which will rise to 100,000*l.* in the year 1859, if the present system be adhered to. He conceives that the legislature never could have intended to impose such a tax upon patentees for the general purposes of the state, and he considers that the Society of Arts is bound to exert itself to rescue this annual surplus from the hands of the Treasury. He lays it down as a principle that the charge upon inventors for securing their patent rights should not exceed what is requisite for maintaining the Patent Office in a proper state of efficiency.

The Council of the Society of Arts, acquiescing in the opinion that there was room at all events for inquiry, appointed a very large and powerful committee of inventors and others to consider and report upon the subjects referred to in Sir Joseph Paxton's letter. The first meeting of this committee took place on Friday in last week. It appeared to be the unanimous opinion of the meeting that the first thing to be done was to obtain the recognition by the Government of the principle that the revenue arising from patent fees should be applied to furthering the objects of inventors; and that the fees so levied should not go into the general revenue of the country but should be applied specially for the promotion of the progress of invention. Various resolutions were passed in furtherance of the object in view.

Fire at Beeston Church, Leeds.—This old church was severely damaged by fire on Monday before last. The disaster is attributed to over-heating the flues. The organ was totally consumed, and a large part of the roof destroyed.

OLD LONDON LANDMARKS.

AT the lower end of Clerkenwell Green was formerly the celebrated fountain, or Clerken-well, so called from the parish clerks of the city of London; who in ancient times used to meet there annually, to represent scriptural plays. The fountain was removed and some buildings planted on the site, but still the ancient well was represented by a pump, on part of which an inscription was properly put by the authorities to mark the historical celebrity of the spot. We were not sorry, considering the account we have heard of the recent condition of the drainage of some of the places surrounding it, and the close neighbourhood of graveyards, to see the handle of the pump chained up and fastened with a padlock; but note that the surrounding brickwork is falling sadly to decay, and are asked to say a word on the subject, lest the matter should be overlooked, now that the pump is unused; and that, perhaps, for want of a little present care, the memorial may be lost sight of.

SUSSEX COUNTY LUNATIC ASYLUM COMPETITION.

THE magistrates of Sussex, desirous of erecting a lunatic asylum, for 400 patients, at Wivelsfield, adjoining Hayward's Heath, invited five architects, known to have erected such asylums, to compete for the same, offering the superintendence of the building to the first, and two premiums of 100*l.* and 75*l.* to the second and third best. After considering the merits of the several designs for three months, they have selected that by Mr. H. E. Kendall, jun. the architect of the Essex County Lunatic Asylum, for adoption. One of the invited competitors did not send in, and it was agreed that the amount of the premiums should be divided equally between the three unsuccessful candidates. The chosen design is a three-storied building, of Romanesque elevation, very simple in form.

Notices of Books.

Mathematics for Working Men. Part I. Arithmetic and Algebra. By T. TATE. London: Longman and Co. 1856.

THIS is a practical work by a competent author. It contains the principles of arithmetical calculations; the estimation of works by the builders' price-book, with the general principles of estimation; and a new list of the constants of labour, with their application in calculating the value of work. It is better adapted to the requirements of workmen in the building trades than to any other, being full of examples, illustrating the measure of surfaces and solids, the value of carpenters, joiners, bricklayers, plasterers, slaters, glaziers' and other work, estimates for building cottages, stables, staircases, &c. &c.

London in the Olden Time,—Memoir and Pictorial Map. By WILLIAM NEWTON, Author of a Display of Heraldry. Published for the Author, 66, Chancery-lane, by Bell and Daldy, 186, Fleet-street.

THE large pictorial map to which the Memoir is appended in this new publication by Mr. Newton, purports to represent the metropolis as it stood in the reign of Henry VIII. before the suppression of the religious houses. The basis of the Map is Roque's Survey, in the beginning of the last century, assisted by various plans, maps, and representations of more ancient date. Stow's Survey forms the basis of the Memoir, in like manner aided by other authorities. Without committing ourselves to all the details of a laborious work of this kind, regarding many of which, indeed, there must ever exist a degree of uncertainty at the best, still it is a very elaborate and carefully compiled production, both pictorially and by description, and forms a highly interesting volume.

VARIORUM.

A "Catalogue of the Museum of Ornamental Art, at Marlborough House, Pall-mall." Part I. by J. C. Robinson, Curator, has been published by Chapman and Hall. It consists of 128 pages, large octavo, of letter press, besides a large number of pages full of illustrative sketches of works of art in the museum,—all at the nominal price of sixpence. The third edition is already in course of issue. This is something more than an ordinary catalogue, even as regards the printed matter.——"Orr's Circle of the Sciences" (Houlston and Stoneman), is assuming the shape of handsome volumes, two of which are now before us,—one on Organic Nature, being the second of the System of Natural Philosophy, and comprising Zoology, or the Natural History of Animals, by W. S. Dallas, F.L.S. and profusely illustrated with engravings. The other is on Inorganic Nature, and comprises treatises on Geology, Mineralogy, and Crystallography. The first treatise in this volume is one by Professor Ansted, on Geology, containing special divisions on Architectural Geology, Engineering Geology, the Geology of Mineral Fuel, and on the application of Geology to the Fine Arts, comprising an interesting section on the peculiarities of landscape scenery. The Mineralogical Treatise is by Professor Tennant, and the Crystallographic, by the Rev. Walter Mitchell. The works of writers of this stamp, cannot but sell well, and be profitable to the publishers.——Mr. Tate has had published by Longman, a little tract on "The New Coinage considered in relation to our School Arithmetics," for the use of teachers and tradesmen, and containing new and simple rules for converting the present coinage into the anticipated new coinage, and conversely, with numerous examples of the new coinage on the various rules of arithmetic. Mr. Tate is of opinion that the pound sterling will be retained as the unit of the expected decimal currency, and that the old copper coinage will be withdrawn, and a new substituted. This is much to be regretted: the penny, with its halves and fourthings, is the true unit, and the broad base of the monetary pyramid, and ought to be retained at all hazards. Nor need the pound or sovereign be withdrawn, although disused in formal accounting, any more than the five-pound note. The penny as the basis would only necessitate the introduction of a silver tenpenny-piece, and a golden hundred-penny-piece, for formal decimal accounting, leaving the old gold coinage to rank with the five-pound notes, and the hundred-pound notes as all equally beyond the categories of the ordinary system of decimal accounting. With the French, mere francs constitute the highest item of accounting, to the exclusion of all golden coinage; but with a hundred-penny-piece, we would have the element of gold represented in accounting, as well as that of silver in the tenpenny, and that of copper in the penny, and its halves and quarters; and this without the necessity of a monetary revolution, or the risk of a physical revolution, as by tampering with the copper coinage of the masses.

Miscellanea.

SALE OF TIMBER.—At a recent sale of navy oak and other timber, grown on the estate of Lord Portman, in the manors or parishes of Orchard Portman, Staple Fitzpaine, Bickenoll, Thurlbeer, West Hatch, &c. which took place at the Greyhound Inn, at Staple Fitzpaine, there were 1,547 trees, divided into 136 lots. The lots sold realized nearly 3,000*l.*

ARCHITECT'S "CLERK."—Will you or some of your enlightened subscribers, be kind enough to inform me when the above cognomen was first applied, and why? I have looked in vain through *Johnson, Walker,* and other English lexicographers, for its derivation or application to this subject: they invariably tell me, that a "clerk" is a bookkeeper or accountant, &c. &c. Now, I happen to be one who has nearly all his life unremittingly racked his brains, in order to acquire a position in Architecture and Engineering, and who so far has attained a share of eminence in both—yet because (as a young man), I am *only* managing assistant to an Architect and Engineer of high standing, I have duly conferred upon me the title of "*Clerk.*" (?) It is highly aggravating to me after all this study and application, and no doubt to many others similarly situated, to have simply (by virtue of the title) the credit of a mere practitioner in "the rule of three." Of course I respect every man's position in life honourably obtained, be it what it may, but "call a spoon, a spoon," and then I know what you mean. If I should be one for my trouble, you may designate me as such; but I have the vanity notwithstanding of claiming to be at least

AN ARCHITECT'S "ASSISTANT."

ELECTION OF SURVEYORS FOR ST. PANCRAS.—On the 13th inst. the St. Pancras Board of Local Management elected Mr. W. Booth Scott as their chief surveyor, Mr. Charles Worrell as clerk to the chief surveyor, and Mr. Isaac Douglas, Mr. William Whitbread, Mr. Robert Cunningham, and Mr. William Johnson, as assistant surveyors.

PROPOSED TESTIMONIAL TO THE FOUNDER OF BUILDERS' BENEVOLENT INSTITUTION.—At the suggestion of Mr. Alderman Cubitt, M.P. and other friends, it is proposed that a testimonial should be presented to Mr. Thomas Cozens, as the Founder of the Builders' Benevolent Institution, and a committee has been formed to carry out the proposition. It is to be hoped they will succeed. Mr. Cozens well deserves some memorial.

SMOKELESS FIRES.—I have always been considered, even by my two elder sisters, an excellent hand at lighting a fire in the good old-fashioned way, which I learnt once upon a time;—Paper first, then half a halfpenny bundle of wood, or, latterly, a patent fire-wheel; then the cinders and small coal, with a nice nubbly bit or two on the top for a finish. But it seems that I am wrong, and everybody else is wrong also, except your correspondent of last Saturday, who tells us how a fire *should* be laid. His plan seemed a very odd one to me; but as I am quite ready to believe that a nation *may* do things improperly for several centuries, and all the while think its blunders are beauties, I determined the experiment should have what advertisers claim—*one* trial. I *have* made the trial, laying the fire according to his directions, and the result has been "a blaze of triumph." It burnt up quickly and brightly, smoked less, and I think consumed less fuel. The economical part of the question is of great consequence to us; for ever since my beneficent godmother, Vestris, retired from public life, and declined the fairy business, the prince and I have been very shabbily treated, and live upon our little income in obscure lodgings, near Red Lion-square, on account of the College, at No. 33, which he attends; and I also go to the women's classes, after I have taken our boy, Cinderello (whose ambition it is to become president of the Ramoneur Association), to Herr Ronge's *Kinder Garten.* I must ask Mr. Maurice to let me organize a fire-lighting class; for I see Mr. Helps, in this month's *Frazer,* looks upon the art as a neglected female accomplishment. By the way, there are a few lines in his pleasant article which concern, and will greatly please, your professional readers.—CINDERELLA.

METROPOLITAN INTRAMURAL BURIAL.—Sir R. Broun has published another pamphlet, in the form of letters, to Sir George Grey, the Home Secretary, on the subject of "Burials within the Metropolis; or, the Dead Man's Question," in which he calls upon Sir George to prevent the interment of so many dead bodies within the limits of the metropolitan district. Sir Richard points attention to the fact, that Dr. Letheby, the new medical officer of health for the City of London, has congratulated the City Sewers Commission, that the last of the city burial-grounds, sixty-five in number, has now been closed; and he hopes that, within the present session, it will be the Home Secretary's task, as the supreme officer of metropolitan health, to do that which will enable him in like manner to congratulate the inhabitants of the whole metropolis, within another year, that the last of its nearly 250 charnel nooks has ceased to exist as a prolific source of pestilential disease.

THE CRADLE FOR THE EMPRESS.—A handsome cradle was wanted for the Empress of the French, something really elegant and good; and to whom think you, good reader, did the authorities apply to design and superintend it for them? Actually to a French architect, M. Baltard: and, what is more, the result is said to be very satisfactory; although we must confess that the description given of it does not commend it to our minds very strongly. It is to be in "the form of a boat." We should have liked it as well if it had been in the form of a—cradle.

THE VICTORIA DOCKS.—The Government are, we believe, in treaty for the purchase of the Victoria Docks, situated on the opposite side to Woolwich.

NEWCASTLE-UPON-TYNE SOCIETY OF ANTIQUARIES.—The annual meeting of this society was held in the Old Castle of Newcastle, on Monday before last, when the secretary read a report, in which the council congratulated the members on the prosperity and progress of the society. Some conversation then took place regarding a covered archway from the castle to the railway arches; and Mr. Longstaffe brought forward a motion, to the effect that the quarto series of the "Archæologia Œliana" being now completed, for the future the publications of the society shall be printed in demy octavo. Another motion was substituted by Mr. Fenwick, to the effect, that it be an instruction to the council to perfect the secretary's set of the Surtees' publications. The motion having been carried, office-bearers were elected for the ensuing year; president, Sir J. E. Swinburne, bart.

Belgrave-square.—A "Belgravian," anxious for the reputation of the late Mr. George Basevi, wishes to mention with reference to Mr. Britton's notice of the buildings erected by the late Mr. Cubitt, that with some trifling exceptions, "the houses in Belgrave-square were built by some gentlemen at that time termed the 'French Company,' to which Mr. Basevi was the architect, and under whose sole direction they were erected."

Fire at New Hall of Caius College, Cambridge.—On Saturday before last serious alarm was created in Cambridge, by the occurrence of a fire in the above hall, recently completed at a great expense. The ornamental work of the hall and the kitchen are damaged by floods of water poured in—the hall, also, by the partial destruction of the floor. The amount cannot yet be estimated. The cause of the fire is said to have been the insufficient size of the flue of the kitchen chimney, causing a large accumulation of soot: this had ignited, and heated the bricks to an extent sufficient to fire the dado and the floor of the hall, which is situate immediately over the kitchen, and is separated from it by a brick roof, arched in compartments, the floor of the hall being pugged under with lime and cement, in order to render the whole, what it was considered to be, fireproof.

Dangerous Property of Water divested of Air.—In a lecture recently delivered before the Royal Cornwall Polytechnic Society, by Mr. R. Hunt, F.R.S. attention was directed to some remarkable points in connection with the action of heat on water that contains no air, stating that, arising from this circumstance, as well as from the spheroidal condition of the steam generated, we have two very active and predisposing causes of boiler explosions. Water, in congelation, rejects all air, and if thus or otherwise deprived of air, it will not boil at 212 deg. Fahrenheit, if excluded from the atmosphere. In this state the temperature will increase even to between 270 deg. and 280 deg.: about these points the whole will explode like gunpowder. This condition of water is not unfrequently found formed in steam boilers, where, during ebullition, the steam carries off the air.

Trinity Church, Tulse-hill.—On Tuesday before last the church recently erected on Tulse-hill was consecrated by the Bishop of Winchester. The church is in the geometrical Decorated style, after a design by Mr. Barry, of Liverpool. The spire rises to a height of 170 feet. The roof, 105 feet long, is in one span of 55 feet 6 inches, resting entirely upon the outer walls. The church has north and south transepts, with galleries above them, and is capable of seating 1,000 persons. The edifice, with the adjoining parsonage, has been built at a cost of rather less than 8,000*l.*

Adulteration of White Lead.—Much has lately been said on the adulteration of food, drugs, &c. which may lead to the improvement of health, and the driving out of the field many of the impositions in practice. The exposure of those touching human life was of paramount importance; still there is a large field open for the inquiry in the various articles used in trade, and amongst them I think few demand a more searching inquiry than white lead. That there can be 1st, 2nd, 3rd, and 4th best, and genuine, is in itself so great an absurdity, that no man buying the worst can suppose he has much of the true article; but while every maker professes to sell so many qualities, how essentially requisite is it that the man who wishes to have the true and genuine one should know how, in an easy and simple way, to test the quality. With this view I would ask, through the medium of your work, as a boon to every man engaged in the consumption of the same, if some kind friend would furnish in your pages the proper test?—J. F.

Holborn-hill again.—Your able advocacy of the improvements in the Metropolis deserves the greatest praise, and I cannot help suggesting your calling aloud for a remedy to the cruel and degrading struggling of horses on Holborn and Snow Hills, daily and hourly drawing heavy conveyances with twenty or more persons, which, in my opinion, calls for the interference of the Society for the Prevention of Cruelty to Animals. I hope you will call public attention to this great evil in the very heart of the metropolis, which may easily be remedied by a few brick arches commencing at St. Andrew's burial-ground and ending at Snow-hill. The property on the left-hand side is not now so valuable, and the width will allow enough of the old roadway to remain for those who prefer it. How the authorities can allow such a nuisance to exist is truly astonishing; and I do hope that you will call public attention to it, which will hasten a remedy and save the poor jaded horses which struggle up and down the hills with their heavily-loaded vehicles, all which may be easily accomplished at no very great outlay, especially as private interests must always give way to public improvement.

John Lawrie.

Churchyard of St. Margaret's, Westminster.—My attention has been drawn to a passage in the *Builder*, relating to the churchyard of St. Margaret's, Westminster. You will be glad to hear that the first steps towards putting this churchyard in good order were taken some days ago, and I trust that a plan for its thorough repair and arrangement will be carried out with as little delay as possible.—H. J. Malde, Churchwarden of St. Margaret's.

Timber Sale.—On Thursday, Mr. Bentley sold by auction, at the Crown Hotel, Broad-street, upwards of 850 oak, elm, and ash trees, from estates at Brausford, Leigh, Powick, and Longdon Hillend. There has not been so large a sale of timber for some years, and it went off exceedingly well. Elm and ash fetched from 1s. to 1s. 4d. per foot, and oak from 2s. to 3s.—*Worcester Chronicle.*

Price of Gas at Lee, Lewisham, and Greenwich.—The inhabitants of Lee, Lewisham, and Blackheath, held a public meeting on 31st ult. at Lee Bridge, as to a reduction in the price of gas; when Mr. Bennett, of Blackheath (the Chairman), stated the reasons given by the Gas Company's servants for charging 5*s.* 6*d.* per 1,000 in Lewisham and 4*s.* 6*d.* in Greenwich, namely, the expense of mains, iron being very dear when the pipes were laid; the enlargement of the Company's plant costing more to supply the "out district;" and also the price of coals. He deprecated the enforcement of two prices, and called upon the inhabitants to avail themselves of the new Liability Act, and secure an improved local gas-work of their own. This proposition was very warmly received by the meeting. Mr. Newman concurred, and stated that from a return published in the *Builder* last year, it appeared that they were paying much more in that district than in any other round London; and that there was no reason why gas could not be sold at 2*s.* 6*d.* per 1,000 He suggested, however, that a deputation be appointed to wait on the Phœnix Gas Directors, requesting to be placed on the same footing as the Greenwich consumers. A deputation was accordingly named. Several gentlemen stated their dissatisfaction with the quality also, and the bad supply of the Company's gas; others with the undue measurement by their metres.

School of Art for Taunton.—On Thursday before last, a public meeting—convened by circulars issued by the Bailiffs of the Borough on behalf of a Provisional Committee—was held at the Guildhall, when the necessary steps for the organization of a "School of Science and Art" in Taunton, in connection with the Department of Science and Art, at Marlborough House, were unanimously resolved on, and a committee appointed to carry out the measure.

Houses in Carey-street.—A correspondent directs our attention to "some dangerous old buildings in this street, ranging eastward from the corner of Bell-yard and Star-yard, which are truly unsafe." Our correspondent has only to give information to the Commissioners of Police, and they will direct a survey to be made under the new Building Act.

The Architectural Exhibition.—On the 13th, H.R.H. Prince Albert visited the exhibition.

Puddlers' Strike at Derwent Iron Works.—During the last fortnight the puddlers employed at the Derwent Iron Works, Bishopwearmouth, have been on strike. It appears that the men are fifty-four in number. There is a dispute as to wages, but the workmen contend that the iron is not in a proper working state. The puddlers left work at a moment's notice, and upwards of 350 other workmen were hence thrown out of employment. The owners of the works refused to pay the puddlers their wages then due, as they had not given a fortnight's notice. The Sunderland magistrates have decided that one half the wages should be forfeited. The strike, by last accounts, still continues.

Destruction of the Pavilion Theatre, Whitechapel.—Early in the morning of the 13th, this theatre was entirely destroyed by fire. The cause is unknown, and some attribute it to the spontaneous combustion of oily tow or lamp-black in the painting loft.

Sale of Plant at Birkenhead Dock Works.—Messrs. Brassey and M'Cormick having fulfilled their great contract at the Birkenhead Docks, by the completion of the embankment enclosing the south reserve, and the whole of the dock property having been purchased by the Corporation of Liverpool, the immense stock of plant and materials with which the work has been carried on has been offered at public auction, by Messrs. Thos. Winstanley and Sons. One day's sale alone produced between 6,000*l.* and 7,000*l.* and the whole property was expected to realize about 14,000*l.* or 15,000*l.* Lot 466, a 40-horse-power horizontal engine, brought 1,100*l.* or about 28*l.* per horse, 447, three boilers, 210*l.*; 449, four pair of mortar-mills, 850*l.*; 517, 30-horse high-pressure beam-engine, 945*l.*; 518, a set of 14-inch iron pumps, 310*l.*

The Welch Iron Trade.—The ironworks generally throughout South Wales are in full employ, not only in the manufacture of rails and bars, but also of pig iron. Large orders for rails are said to have been taken by those works which roll rails, at from 8*l.* 10*s.* to 9*l.* 10*s.* per ton. In several localities extensions of premises are going on.

Fire at East Malling Church.—This Church was discovered to be on fire on Monday before last. The woodwork suffered to a considerable extent, the damage being estimated at 300*l.* The cause of the fire was the overheating of a flue, which, passing through the roof, ignited the woodwork.

Preservation of the South Castle at Southampton.—A public meeting has been held at the Guildhall, Southampton, for the preservation of the architectural remains, called the South Castle, and associated buildings, known as the Old Gaol and Debtors' Ward, and for setting them apart permanently for a museum, library, and school of design. The mayor presided.

Institution of Mechanical Engineers.—The ninth annual general meeting of this institution was held on 30th ult., at the house of the institution, Newhall-street, Birmingham, Mr. William Fairbairn, F.R.S., president, in the chair. The annual report of the council spoke of the satisfactory position and progress of the institution. The election of officers for the present year took place, together with the election of several new members, Mr. Joseph Whitworth being elected president. A paper was then read "On the Pumping Engines of the Wolverhampton Water Works, with some Remarks on Water Pumping," by Mr. Henry Marten, of Wolverhampton. The second was "On Wood Bearings for Screw Propeller Shafts," by Mr. John Penn, of London. The next was a "Description of an Improved Construction of Crossing," by Mr. Henry Woodhouse, of Stafford. The last paper was "On an Improved Safety-valve," by Mr. Ramsbottom, of Manchester. In the evening a number of the members and their friends dined together at Dee's Hotel, in celebration of the ninth anniversary of the institution.

The Barracks Competition.—The decision of the committee now waits the approval of Lord Panmure. The letters containing successful competitors' names have not yet been opened. It appears that the first decision of the committee has been revised.

TENDERS

For building a residence in the Italian style in East-India-road; Mr. William Ellison, architect:—

	New House.	Allowed for old House on Site.

Branson and Gwyther (accepted)	14,474	— 12,948

TO CORRESPONDENTS.

"*Ornamenting Candles*"—A correspondent, who signs herself "Deborah D" wishes to know the best means of "illuminating candles," i.e. colouring, not lighting them; whether they must necessarily be of wax, or if Price's patent composites will afford a successful ground for operating upon. The difficulty is to lay the colour on smoothly.

TRENHAM REEKS, Registrar.

SAINT MARYLEBONE.—SEWERS DEPARTMENT, FEBRUARY 9, 1856. Notice is hereby given, that the Vestrymen of the parish of St. Marylebone are ready to receive APPLICATIONS from persons competent to fill the OFFICES of CLERK of WORKS and OFFICE CLERK in the SEWERS DEPARTMENT of the said vestry. The clerk of the works must be able to write a good business hand, to be competent to the taking of levels and sections, and to the making of working drawings; and to have a practical knowledge of the formation and building of sewers and drains, and to be under the direction of the parish surveyor; the salary to be 150l. per annum. The office clerk must be able to write a good hand, to draw neatly, and to be competent to take plans, levels, and sections; to be under the direction of the parish surveyor, for the work of the sewers department, or any other employment the said surveyor may direct; the salary to be 100l. per annum. The persons elected to either of the foregoing offices will be required to devote their whole time to the duties of their respective offices. The ELECTIONS will take place on SATURDAY, the 1st day of MARCH, between the hours of ELEVEN and ONE o'clock; and all applications for the above situations must be delivered at the COURT HOUSE, Maryleb ne-lane, addressed to the VESTRY CLERK, on or before TUESDAY, the 26th day of FEBRUARY instant; and the candidates must attend personally at the Court House, Marylebone-lane, on THURSDAY, the 28th day of FEBRUARY, 1856 at the hour of ELEVEN o'clock in the forenoon, and produce a specimen of their own drawing and handwriting.—By order,

W. E. GREENWELL, Vestry Clerk.

WANTED, a good practical STREET MASON, to act as CLERK of WORKS, for the CARRIAGE and FOOTWAYS, in the STRAND DISTRICT, comprising the parishes of St. Anne, Soho, St. Clement Danes St. Paul, Covent-garden, St. Mary-le-Strand, Liberty of the Rolls, and the precinct of the Savoy. He will be required to understand measuring, and must write a legible hand. Salary, 100l. per annum. Applicants to state on what works last engaged.—Letters in the handwriting of the applicants, with testimonials, to be addressed to Mr. GEORGE FREDERICK FIG, Surveyor to the Board of Works for the Strand District, 23, Henrietta-street, Covent-garden, of whom further particulars may be obtained. No application will be received after TWELVE o'clock at noon, on WEDNESDAY, the 20th FEBRUARY instant.—Feb. 13, 1856.

PARISH of ST. JOHN, HAMPSTEAD.—INSPECTOR of NUISANCES and SURVEYOR.—Notice is hereby given, that at the Vestry to be held at the Hampstead Workhouse, on FRIDAY, the 22nd day of FEBRUARY, 1856 at HALF-PAST SEVEN o'clock in the evening, the Vestrymen will proceed to appoint a fit and competent person to execute the duties of INSPECTOR of NUISANCES and of SURVEYOR of PAVEMENTS and of ROADS and LIGHTING for this parish. Such officer will be required to reside in this parish, and to devote his whole time and attention to the duties of his office. The salary will be 200l. per annum. A thorough and practical acquaintance with sewerage, drainage, road-making, and paving, and other similar works, will be a necessary qualification. The duties can be ascertained on application at the Vestry-clerk's office, in Hampstead Workhouse. Written applications for the office, in the handwriting of the candidates, with testimonials, must be sent or delivered to the Vestry-clerk on or before WEDNESDAY, the 20th instant; and the candidates must attend personally at the time fixed for the vestry.—By order,

THOMAS TOLLER, Vestry-clerk.

Hampstead, February 8, 1856.

A YOUNG MAN, a Surveyor and Builder, solicits an ENGAGEMENT as BUILDING AGENT, to superintend erections and general repairs, and personally to superintend the workmen. Would collect rents if required. Security given, and references and testimonials of the most satisfactory nature will be produced.—Address, A. B. Retreat Cottage, Dorking, Surrey.

TO BUILDERS.

AN experienced BUILDER'S CLERK is open to an ENGAGEMENT, either in the Office or as Manager of a Joinery Business. Address, Y. Z. 5, George-terrace, West-street, Croydon.

TO BUILDERS AND OTHERS.

AN experienced BUILDER'S CLERK is open to a RE-ENGAGEMENT.—References unexceptionable.—Address, A. B. Mr. Cowley, Upper Sydenham.

A PRACTICAL CLERK of WORKS and WORKING DRAUGHTSMAN, is open to an ENGAGEMENT.—Address, B. B. Hope Coffee-house, Bull-alley, Moorgate-street.

TO BUILDERS.

AN experienced BUILDER'S CLERK is in want of an ENGAGEMENT in an OFFICE; is capable of making finished and working drawings, taking out bills of quantities, making estimates, and the routine generally of a builder's business. Terms moderate. Satisfactory references given.—Address, N. O. 5, Claremont-place, Hornsey-road.

TO STATUARIES, &c.

A GOOD CARVER is desirous of EMPLOYMENT; he has had much practice on monumental and chimney-piece work, and is well acquainted with Gothic.—Address, J. E. 51, Wilton-street, Westminster.

TO BUILDERS AND PLUMBERS

A GOOD PLUMBER wishes EMPLOYMENT in town or country. No objection to the three branches. Can give good reference.—Address, T. B. 11, Charles-street, Eastbourne-terrace, Bayswater.

CONSTANT EMPLOYMENT.

A HANDY MAN, who can do plastering, whitewashing, paperhanging, set stoves, and other jobbing work, and who would be willing to make himself generally useful and study the interests of his employer, is WANTED, by a Gentleman having a large number of houses. Wages, 3s. 6d. per day. Apply, by letter only, stating age, how, and where last employed, to Mr. E. JAMES, No. 3, Fore street, City.

TO BUILDERS AND OTHERS.

AN Experienced and Practical Surveyor is OPEN to a partial or permanent ENGAGEMENT in Measuring, Estimating, taking out quantities, or the making up of Builders' Accounts.—Address, H. J. Office of "The Builder."

TO ARCHITECTS, &c.

A GENTLEMAN would be glad to meet with an ENGAGEMENT as PRINCIPAL ASSISTANT, or otherwise. He is a good draughtsman, and has had considerable experience in designing in the Italian and Ecclesiastical styles of architecture, and possesses a good knowledge of detail and construction.—Address, ZETA, 13, Canterbury row, Newington.

A GENTLEMAN, thoroughly and practically acquainted with Counting-house duties, a competent Book-keeper, accurate Accountant, and able to conduct an extensive correspondence, is desirous of EMPLOYMENT in a respectable house of business, at a moderate salary.—Address, P. Office of "The Builder."

WATERSIDE MANUFACTURING PREMISES TO BE LET (or Lease to be Sold), particularly adapted for Cement Manufacturers being completely fitted with Kilns and furnace-work on the latest improved principles; also, a large Plot of Ground adjacent, with sheds and stabling suitable for a carpenter, wheelwrights, livery-yard, or as an adjunct to the wharf, situate near the Canal bridge, Kingsland-road.—For particulars, apply to Messrs. EVERSFIELD and HORNE, Auctioneers, 40, Parliament-street.

ST. JOHN'S, HORSELYDOWN.—Extensive and eligible PREMISES TO BE LET, by Tender, by the Governors of St. Olave's Free Grammar School, Southwark, on a seven-one years' repairing lease from Lady-day now next ensuing, that is to say, all those Premises, a brute and Tavern situate in the parish of Magdalen-street, Tooley-street, known and lately used as the Branch School. The Premises comprise a gateway-entrance; residence; large and well-lighted boudoir, with suitable offices, and a spacious open area; and are very suitable for any business requiring space, light, and security. The property is situate in the parish of St. John's, Horselydown, in the county of Surrey, together with the appurtenances thereunto respectively belonging. The particulars and conditions, plans of the premises, and specifications of the repairs to be performed, may be seen at the Office of Mr. HENRY STOCK, the Surveyor, No. 6, Duke-street, Southwark, between the hours of TEN and FOUR o'clock, any day, Sundays excepted; and Tenders (in writing only) are to be delivered at the Office of Mr. R. MINSHULL JONES, No. 190, Tooley-street, Southwark, on or before ELEVEN o'clock on THURSDAY, the 21st FEBRUARY next, immediately after which a Court of Governors will be held at the School House, for the purpose of taking the same into consideration, and where persons making such Tenders are to attend punctually at TWELVE o'clock of the same day; but the governors do not bind themselves to accept the highest or any offer or offers.
February 6th, 1856.

TO BE LET on Building Lease, the HALL and PREMISES belonging to the Worshipful Company of Weavers, opposite the entrance to Guildhall, in Basinghall street. A suitable site for the erection of Offices or any large building. Frontage, about 37 feet; depth 120 feet. The Court will meet at the premises for receiving TENDERS for the same, on TUESDAY, the 4th MARCH next. The premises may be viewed by permission of the tenants, and further particulars may be obtained of JOSEPH JENNINGS, Esq. 3, Foley-place, Cavendish-square; and of Messrs. DAVIDSON and BRADBURY, Solicitors, No. 18, Basinghall-street.

TO BUILDERS, CONTRACTORS, and OTHERS.—TO BE LET, for eighty years, a large HOUSE, containing upwards of twenty rooms, which, in consequence of the formation of a new street, will have a frontage of nearly 100 feet one way and 40 feet another; is capable of being divided into three houses to pay a handsome per-centage on the outlay. Also, Building Land adjoining thereto, suitable for a small but elegant style of house. Arrangements can be made with persons taking the latter to enable them to perform the alterations to the present building for the proprietor, at prices and terms to be agreed upon. Apply to Mr. PIBNE, Architect, Oakley-street, Chelsea.

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the offices of Messrs. MORGAN and PHIPSON, Architects, 5, Chancery lane.

FREEHOLD GROUND, CHANCERY-LANE and FETTER-LANE.—The Commissioners of Sewers of the City of London hereby give Notice, That they will meet in the GUILD HALL of the said City, on TUESDAY, the 26th of FEBRUARY next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for taking, on Building Lease for Eighty Years, certain PLOTS of GROUND, situate at the south-west end of Chancery lane, and the south-east end of Fetter lane.—Further particulars may be had, and plans seen, on application to Mr. HALWARD, Surveyor to the Commission, at these Offices, in the Guildhall. The Commissioners will require a plan and elevation of the premises proposed to be built, to be submitted to them for approval; and do not bind themselves to accept any proposal, unless deemed advantageous.

JOSEPH DAW, Principal Clerk.
Sewers' Office, Guildhall, January 9, 1856.

STRATFORD, ESSEX.—FREEHOLD LAND, within three miles of London, exonerated from land-tax and free of tithe, TO BE LET on LEASE, for a long term of years, in large or small plots, suitable for manufactories or building purposes.—Apply to Mr. W. H. DEAN Auctioneer and Surveyor, Stratford; or to Mr. GEORGE POWNALL, Surveyor, 7, Bloomsbury square, London.

TO ENGINEERS, ARCHITECTS, SOLICITORS, ARTISTS, AND OTHERS.—A first-rate HOUSE TO BE LET, on lease, No. 14, HART-STREET, BLOOMSBURY, in excellent repair, and fitted up with solid Spanish mahogany doors, and peculiarly well adapted for any gentleman in the above professions, having light superior offices, and every domestic convenience and comfort.—May be viewed, and particulars had on the Premises, from NINE till TWELVE, or FIVE to SEVEN; also of Mr. WARD, 27, Regent-street, Waterloo-place.

HARROW.—FREEHOLD LAND.—TO BE SOLD, 100 ACRES, in a ring fence, and several other eligible plots of FREEHOLD LAND, at a moderate price contiguous to the Harrow Railway Station, and intersected by capital roads. Residents are entitled to the privileges of the Harrow School, and the London and North Western Railway Company offer to persons building houses of approved elevation, worth 50l. per year each, a free first-class pass between Harrow station and Euston square, for eleven years. There is an abundant supply of excellent water, and very superior brick-earth on the land.—Apply to WILLIAM B. COOPER, Esq. Solicitor, 3, Verulam-buildings, Gray's-inn.

BUILDING-GROUND, Clerkenwell, in the direct line of the new street from Farringdon-street to Islington.—GROUND TO BE LET for third-rate houses, with or without workshops and back entrances in capital site for a public-house.—To see plan and particulars inquire at the Office of N. T. RANDALL, Esq. Architect, 28, Great Winchester-street, City, between the hours of TEN and FOUR o'clock.

TO BE LET, SEMI-DETACHED VILLAS, in immediate neighbourhood of Victoria New Docks, and in parish of Plaistow. Each house contains two parlours and breakfast-room, three bed-rooms, kitchen, scullery, pantries, and W.C. They are completely fitted up with every convenience,—coppers, water, stoves, and blinds. They are partially grained oak and varnished, and all are papered with newest patterns. They are ready for immediate occupation, and, in consequence of the failure of the builder, they will be let for the low rent of 28l. per annum. Taxes are very moderate, and railroad and omnibus conveyance within easy distance.—Apply to Messrs. WM. G. and E. HADERSHON, Architects, 38, Bloomsbury-square, London; at whose Office views and drawings may be seen.

TO CAPITALISTS, BUILDERS, and SPECULATORS.—The valuable BUILDING ESTATE of "Oak Bank," surrounded on all sides by good roads, having extensive frontages to the river Itchen, and fine views of the town of Southampton, the docks and shipping, and Southampton Water, is TO BE LET on Building Leases for 1,000 years from the present proprietor. This valuable building property is within a few minutes' walk of the docks and town of Southampton, and being within the municipal boundary, the rates and taxes are almost nominal. Its peculiar formation permits it to be made available for dwelling suitable to every class.—Further particulars will appear in a future advertisement; and the plans may be viewed and full information obtained on application to Mr. ALFRED G. LOCK, Architect, Surveyor, and Land Agent, Offices, Onslow-road, Southampton: on and after the 25th day of February.

BROAD-STREET, RATCLIFF.—THREE HOUSES, Nos. 95, 96, and 97, and FOUR SMALLER, Nos. 8, 9, 10, and 11, BURLINGTON-PLACE, TO BE LET, by TENDER, on a repairing lease, for twenty-one years, from next Midsummer-day next. Sealed Tenders to be delivered on or before MONDAY, the 3rd of MARCH, 1856, at the Clerk's Office, Coopers'-hall, Basinghall-street, where further particulars may be obtained. The Court will meet at the Hall on TUESDAY, 4th MARCH, at ELEVEN o'clock, where parties who have sent in Tenders are requested to attend. The Court do not bind themselves to accept the highest or any Tender.
JAS. BOYER, Clerk.
Coopers'-hall, February 5, 1856.

TO ENGINEERS.—TO BE DISPOSED OF, by direction of the executors, a very compact BUSINESS in London, which has been established many years. The premises are centrally situate, and conveniently arranged for the business. The principal tools are nearly new, by Smith Beacock, and Tannett, of Leeds, and include a 12-inch self-acting slide lathe planing machine, and drilling machine; there are also three other lathes, high-pressure steam-engine and boiler, smiths' forges and tools, fitters' benches, vices, and tools. About 1,000l. will be required, and to any active young man desirous of starting in business, a very eligible opportunity is presented.—For further particulars, apply to Messrs. FULLER and HORSEY, Billiter-street, City.

TO MANUFACTURERS, MERCHANTS, and OTHERS.—TO BE LET, a HOUSE, well and substantially built, and in excellent condition, with extensive PREMISES, situate in the western part of the City, and well adapted for shops and dwelling-house, and workshops. The materials of the present erections may be used if sound, in erecting any new buildings that may be approved. Money will be advanced if required by the purchaser, or taken to carry out the undertaking, upon a satisfactory arrangement.—Inquire of Messrs. HOWARD and DOLLMAN, Solicitors, 141, Fenchurch-street; Mr. EDWARD LOWTHER, 38, Red Lion-street, Clerkenwell; or of Mr. MURRELL, Auctioneer, 1, Walbrook, City.

TO BUILDERS and OTHERS. — An excellent SITE TO BE LET or SOLD, for BUILDING PURPOSES, with a good double frontage, situate in a leading thoroughfare, and in an established neighbourhood, well adapted for shops and dwelling-house, and workshops. The materials of the present erections may be used if sound, in erecting any new buildings that may be approved. Money will be advanced if required by the purchaser, or taken to carry out the undertaking, upon a satisfactory arrangement.—Inquire of Messrs. HOWARD and DOLLMAN, Solicitors, 141, Fenchurch-street; Mr. EDWARD LOWTHER, 38, Red Lion-street, Clerkenwell; or of Mr. MURRELL, Auctioneer, 1, Walbrook, City.

HANDS'S PATENT ECONOMISING KILN is the only simple and effectual mode to use the heat, for drying moist moulded clays, sound at any season, in time of burning and cooling the kiln, with perfect ventilation.—Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

TO THE COMMISSIONERS OF THE BOARD OF HEALTH, AND TO ALL PERSONS INTERESTED IN THE SMOKE QUESTION.

HANDS'S PATENT is the only simple and certain remedy for the SMOKE NUISANCE: it has combined, where necessary, the advantages of a drying process and perfect ventilation, without a particle of complicated machinery. Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an EXTERNAL WALL.

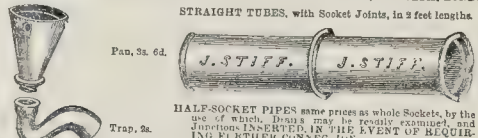
With single pulley, from 6s. each; with leading pulley, from 6s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed on the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 29, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PAPER-HANGINGS. — JEFFREY, ALLEN, and CO. beg to inform the trade, they have a large selection of Paper-Hangings of their own manufacture, of all qualities, and at very low prices. They confidently invite attention to their best papers, which in price, style, and colouring, are equal to any that can be manufactured.—J. A. and CO. are the sole proprietors of the Gutta Percha Paper, an efficient remedy for damp walls.—Factory, 115, Whitechapel; Show-room, 500, Oxford-street.

PANTILES.—WANTED, a quantity of NEW PANTILES, of approved quality, to be delivered near the London Docks.—Address, stating price, to Mr. JAMES RIVETT, Builder, Stratford, Essex.



GREAT REDUCTION IN PRICES.

JAMES STIFF,

MANUFACTURER OF GLAZED STONEWARE DRAIN PIPES, WATER-CLOSET PANS, SINK TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE AND OTHER PURPOSES,

LONDON POTTERY, HIGH-STREET, LAMBETH, LONDON.

STRAIGHT TUBES, with Socket Joints, in 2 feet lengths.

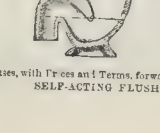
Pan, 3s. 6d. Pan, 3s. 6d.

Trap, 2s. Trap, 2s.

HALF-SOCKET PIPES same prices as whole Sockets, by the use of which, Drains may be readily examined, and Junctions INSERTED IN THE EVENT OF REQUIRING FURTHER CONNECTIONS.

Drawings, with Prices, will be forwarded free, on application.

GREAT REDUCTION IN GLAZED STONEWARE PIPES.



STEPHEN GREEN,

IMPERIAL POTTERIES, LAMBETH.

S. G. wishes to call attention to his WHOLE and HALF-SOCKET PIPES, made on the principle of PILBROW'S IMPROVED REBATED SOCKET-END, which fully secures a joint free from obstructions, and meets the demand for removing Pipes at any point.

5s. 6d. each; if fitted with PATENT AIR-TIGHT VALVES, 1s. 6d. each extra.

Also to his IMPROVED REGISTERED CLOSET-PAN, with an impervious White Glaze inside, and formed to insure a Flush of Water over the entire Internal Surface. Made with or without STEPHEN GREEN'S PATENT AIR-TIGHT VALVE on the top of the Trap.

N.B. Prospectuses, with Prices and Terms, forwarded post-free, as also Prospectuses of STEPHEN GREEN'S PATENT SELF-ACTING FLUSHING CLOSET, complete, with Seat and Riser, &c.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Portzolano.

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON, BRICK, LIME, and CEMENT MERCHANTS, SOUTHAM BLUE LIAS LIME DEPOT.

Bath, Portland, Lias, and Roman Cements; Parian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewage Pipes, Fire Goods, Vitrified Blue Bricks, White Building Bricks, White Enamelled Pans and Traps, and every description of Building Material.

N.B. Lump and Ground BLUE LIAS LIME delivered in boat-loads direct from the Works in Warwickshire, to any part of the river or canal.

SOUTHAM BLUE LIAS LIME DEPOT, No. 14, SOUTH WHARF, PADDINGTON.

TATHAM & CO. have arranged for a constant supply of the above very superior BLUE LIAS LIME, which for the last two years has been extensively used at most of the large works constructed during that period or now in hand, and any orders they are favoured with will command their best attention.

Boatloads of either Lump or Ground Lime can be delivered direct from the Works in WARWICKSHIRE to any part of the Rivers Thames or Lee, alongside any wharf on canal, or by boat or rail to any part of the kingdom.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders addressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention.

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Praed-street, Paddington.

BATH, PORTLAND, and ROMAN CEMENTS GROUND and LUMP HYDRAULIC BLUE LIAS LIME.

THE LONDON and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being excavated in its pure and unadulterated state, from quarries on their own property. The Company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or ship-d from their wharf, direct to all parts.—Agents required, and a liberal discount allowed. Orders received by Mr. KIALLMARK, 80, Old Bread-street, City, or by RICHARD WINTER, Cement Works, Dunball, Bridgewater.

BATH CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

PORTLAND CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be altogether avoided. The Powdered White Zinc may be used for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK—LONDON—PATENT. And when so marked, the quality is guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BOORMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their contiguity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confidently hope they shall be able to supply the public with a first-rate article, in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be affixed to the head of each cask. Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.

Agents in London:—Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.

G. BURGE, Jun. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.

DAVIES and NORMAN, Agents.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.
IN EVERY VARIETY.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

NOTICE.—BLUE LIAS LIME.—L. B. PEARSE and CO. beg to inform Architects, Engineers, Builders, and Contractors generally, that they have now accepted the AGENCY for the above valuable HYDRAULIC LIME, from the original quarries, Stockton, Warwickshire, and are now supplying direct from the works in their own boats, at a reduced rate.

L. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large buildings and machinery for grinding lime and cement, so as to insure genuine quality and large supply, at their extensive premises, situate on the Great Northern Railway, York-road, King's cross.

GREY STONE LIME WHARFS, 12, UPPER GROUND STREET, Blackfriars (Surrey side 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Best Grey Stone, or Grey Chalk, free on board at Works, 1s. 3d. per ton.
Small ditto, ditto, 6d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London. March 30, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GIBBS, CANNING, and CO.'S BLUE VITRIFIED BRICKS, PIPES, JUNCTIONS, BENDS, and FIRE GOODS.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

GREAVES'S BLUE LIAS LIME.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

NOTICE.

SOUTHAM HYDRAULIC BLUE LIAS LIME.

WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality ground and lump, into boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

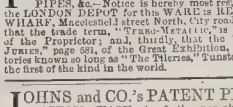
BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Stamp Place, half-washed Stocks, and Place Bricks, also on sale These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Fit Sand of superior quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.



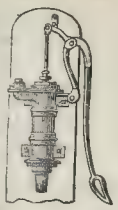
OLD BRICKS.—FOR SALE, 100,000; also a large quantity of capital Fire Bricks and Tiles, at the Gas Works, Schoolhouse-lane, Ratcliff.

CAPITAL MALM CUTTERS, Yellow and Pale Seconds, and Paviours, FOR SALE, delivered to any part of London.—Apply by letter, post paid, to EDWARD WEST, Turk's-row, Turk's Head Inn, Twickenham, opposite St. Margaret's Estate.

N.B.—Stock, Grizzle, and Place Bricks for sale.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boys to remove the bricks. Vide "Mechanic's Magazine," for January 1st, 1856.—Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.



BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 1, Adelaide-place, London-bridge. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

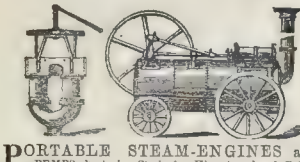
PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield street North, City road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "HONORS OF THE JURIES," page 681, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH (perfectly non-absorbent) STUCCO CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers. Grand Surrey Canal Bridge, Old Kent-road. Office, 4, George-yard, Lombard-street.

TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to
JOHN WARNER & SONS'
PATENT VIBRATING
STANDARD PUMP,
which is recommended for the simplicity of its construction, and the ease with which it works.
By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than Pumps made on the old plan.
Beer and Water Engines for raising fluids from a depth not exceeding 33 feet; also, Garden Engines constructed on the same principle.
JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

R. RICHARDS and CO.
PUMP MANUFACTURERS and ENGINEERS,
Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.
PUMPS ON HIRE.
Pumps of any size, single or double barrel, up to double 15-in. diameter, kept ready for use at reduced prices.

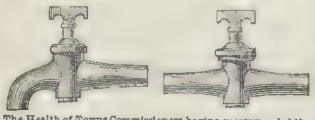
N.B. The above can be worked either by hand, horse, or engine power.



Iron Pails 28s. per doz. painted.
Ditto .... 43s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

B. FOWLER & CO.'S
PORTABLE PUMPS,
3-inch to 9-inch Barrels,
Plain or Sliding Telescope Suction,
ON HIRE.
SINGLE AND DOUBLE PUMPS,
all sizes,
to any depth, for Hand or Steam Power.
Patent Double-action and General Pump-makers, Builders' Smiths, &c.
WHITEFRIARS-STREET,
Fleet-street.



PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street Blackfriars-bridge (Surrey Side.

PUMPING and WINDING ENGINE.—TO BE LET on HIRE, or for SALE, a nearly new strong and simple PUMPING and WINDING STEAM ENGINE, of 20-horse power, by Medwin and Hall, with a pair of 10-inch pumps and all the driving gear complete. The contractor for whom it was fitted up will make a considerable sacrifice on the cost price, or let the whole on hire.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, 92, Blackfriars-road.

TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from Leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, sooks, or wire.
LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

LYTCHETT POTTERY.—For SALE by PRIVATE CONTRACT, the LEASE and PLANT of the above Premises. The lease consists of about fourteen acres of land and a good cottage. The land contains a large quantity of very superior clay for pottery and fire goods. The drain pipes made from the clay are equal, if not superior, to any yet in the market, and the fire goods will bear comparison with any yet made. The plant comprises three pottery kilns and two brick kilns, with pug mills &c., pug mills, and all other necessary apparatus. Lytchett Pottery is 4 miles from the South Western Railway, and 3 miles from the port of Poole. For further particulars, and to view, apply to H. P. FISHER, Blandford.

GREAT REDUCTION in the PRICE of STONEWARE POTTERY from this date.
VICTORIA POTTERY, LEIGH, near SOUTHEND; London Establishment, Potters Wharf, near Barkside. DAVID MORNTAGUE, Manufacturer of every article of Lambeth POTTERY, having now further reduced the prices here to offer to Builders and others, STONEWARE PIPES &c. &c. on the most advantageous terms. The new lists of prices will be forwarded on application as above.—Feb 11, 1856.

GREAT REDUCTION IN PRICE OF DOULTON'S DRAIN-PIPES.
HENRY DOULTON AND CO.
Beg to inform Builders, Contractors, and others, that they have made a considerable REDUCTION in the PRICES of their
GLAZED STONEWARE DRAIN-PIPES,
Drawings and Prices will be forwarded on application.

REDUCTION IN THE PRICE OF CLOSET-PANS.

DOULTON AND WATTS,
LAMBETH POTTERY, HIGH-STREET, LAMBETH,
Have reduced the Price of their PATENT ENAMELLED CLOSET-PANS WITH TRAPS, to
5s. 6d.
These Pans, therefore, which have a strong Vitrified Body, as well as a White Interior Glaze, may now be obtained at the price of the commonest description of Closet-pans.

GREAT REDUCTION IN THE PRICE OF STONEWARE DRAIN-PIPES.

WILLIAM NORTHEN,
UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH,
Begs to call the attention of Surveyors, Contractors, Builders, and others, to a very great REDUCTION in the PRICES of his
GLAZED STONEWARE DRAIN-PIPES.
LISTS OF PRICES FORWARDED ON APPLICATION.

KINSON POTTERY AND CLAY WORKS, POOLE, DORSET,
DEPOT, 2 AND 3, HIGH-STREET, LAMBETH.

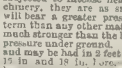
HALF SOCKET.

WHOLE SOCKET.

Manufacturers of every description of Sanitary Glazed Sewage Pipes, Bends, Junctions, White Glazed Closet Pans, Gas Retorts, Furnace Blocks, Crucibles, Fire Clay, &c. &c.
The Fire Bricks made from the Clay of this estate have been tested, and proved to be in every respect equal to those of Stourbridge and Newcastle.
DRAWINGS AND PRICES MAY BE HAD OF J. COX, AS ABOVE.

SUPERIOR LAND DRAINAGE.—AGRICULTURAL DRAIN PIPES of all sizes, and in any quantities, can be SUPPLIED, either by water or land carriage, at a reduced rate, by applying to L. B. PEARSE and CO. Great Northern wharf, York-road, Kings-cross.

TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.
FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains, pumps of every description. Estimates prepared for all works connected with hydraulic press. Pumps on hire.
W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

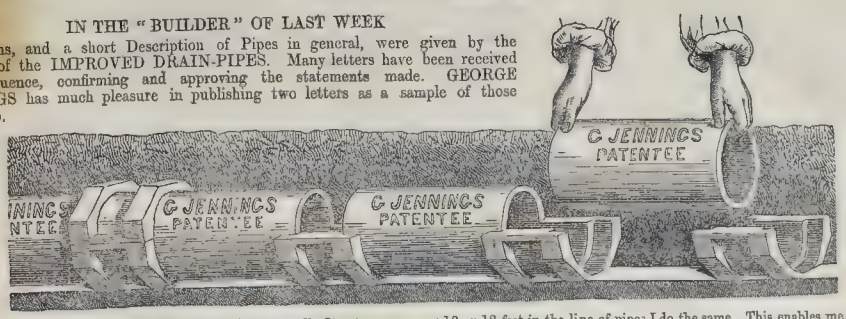


COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES BENDS, JUNCTIONS, and TRAPS of the best quality, and allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and CO. Great Northern wharf, York-road, Kings-cross.

WHITE and BLUE CLOSET BASINS, URINALS, &c.
MILLWALL POTTERY.
DEPOT:
ARTHUR-STREET, NEW OXFORD-STREET.

TO DRAIN PIPE MAKERS.
WANTED IMMEDIATELY, 10,000 9-inch RED GLAZED SOCKET-PIPES, to Farnborough Station, South Western, for South Eastern Railway.—Address to H. BIRCH, Contractor, Farnham, Surrey.

WILLIAM GILBERT, Tividale Pottery and Blue The Works near Tipton, Staffordshire.—The BLUE WARE SANITARY PIPES made by W. GILBERT are the only GLAZED pipes of the kind manufactured in England. They are well vitrified, smoothly glazed, and very durable, being subjected to intense heat in the kilns. Being moulded by machinery, they are as smooth and straight as stoneware pipes; will bear a greater pressure, and endure in the drains a longer term than any other material. The sockets are deep, and made much stronger than the body of the pipe, so as to resist all unequal pressure under ground. These pipes are cheaper than stoneware, and may be had in 2 feet lengths, of 2 in. 3 in. 4 in. 6 in. 9 in. 12 in. 15 in and 18 in. bores, with all kinds of syphons, junctions, bends, gauges, and drain gratings to match. Flreclay chimney-pots of 100 patterns. Glazed stoneware sewerage pipes, &c. &c. Terra cotta clay brackets, trusses, vases, fountains, busts, statues pedestals, &c



DRAUGHTS ROUND DOORS and WINDOWS.—GREENWOOD'S PATENT INDIA-RUBBER STOPS, to supersede list or leather, for the purpose of keeping out dust and draught round doors, windows, closets, cupboards, &c. making the same air-tight. Price 4d. per foot. Spring Slides for bottoms of doors, 4s. each.
JOHN GREENWOOD, Carpenter, &c. Arthur-street West, London-bridge.

TO ENGINEERS, ARCHITECTS, SURVEYORS, AND OTHERS, INTERESTED IN EFFICIENT DRAINAGE.

IN THE "BUILDER" OF LAST WEEK

Illustrations, and a short Description of Pipes in general, were given by the Patentee of the IMPROVED DRAIN-PIPES. Many letters have been received in consequence, confirming and approving the statements made. GEORGE JENNINGS has much pleasure in publishing two letters as a sample of those referred to.

"City Bank, Threadneedle Street,
"February 12th, 1856.

"SIR,—I quite agree with all you state in your advertisement in last week's *Builder*. As a further illustration of the necessity of examination, I may add, that I was sent by Messrs. Hunt and Stevenson, in 1853, to Dr. Wordsworth's, to examine and report upon the drainage of the mansion and offices. Before I could do so, I had to break into the drain-pipes at various points. Eventually it was found necessary to break the pipes every fifteen feet to cleanse them; the difficulty of restoration was great, and the expense considerable.

"As a clerk of works of some years' standing, permit me to observe that drains and drain-pipes are often nearly stopped by shavings, &c. before the works are out of the contractor's hands.

"However strict a clerk of works may be, foreign matters will find their way into the drainage.

"In all cases where I have used your pipes—and I recommend its adoption generally—I leave a saddle loose at the foot of every soil or rain pipe, and every 10 or 12 feet in the line of pipes I do the same. This enables me, at the completion of the works, to see if my drains are perfectly clear; if so, I have the saddles previously left loose, bedded like the rest. Although a comparative stranger, I wish you all the success your ingenuity deserves.

"I am, Sir, your obedient Servant,
"JOHN JARVIS.

"Mr. George Jennings."

"Surveyor's Office, Yeovil, February 11th, 1856.

"SIR,—I have much pleasure in bearing testimony in favour of your patent drain-pipes. We are using them in this town both for public and private drains, and they are generally considered equal in manufacture, and superior in principle, to any other pipes yet offered to the public.

"I am, Sir, your obedient Servant,
"ROBERT L. WILLIAMS, Town Surveyor.

"Mr. Jennings."

The Pipes above illustrated and referred to, with all the advantages they offer, are the SAME PRICE AS CHARGED BY THE RESPECTABLE LONDON POTTERS.

The Show-rooms now built on Jennings's Wharf, Holland-street, Blackfriars, will be open in March next, for the Exhibition of Sanitary Inventions, suitable for EVERY CLASS OF BUILDING, PUBLIC OR PRIVATE. In the meantime, Illustrated Particulars and Prices of JENNINGS'S Self-acting and other Waterclosets, Urinals, Lavatories, Pumps, Sluice-Valves, Fire and other Cocks, Gully-traps, Shop-shutter Shoes, Earthenware Drain and Soil Pipes, &c. &c. can be had free, on application, or by post, on enclosing two stamps to

GEORGE JENNINGS, SANITARY ENGINEER, GREAT CHARLOTTE-STREET, BLACKFRIARS.

N.B.—Illustrations and Particulars of FOUR OTHER PATENTS FOR SANITARY PURPOSES just taken by GEORGE JENNINGS will appear in the course of a week. In the mean time they can be seen at the Factory, as above.

WILLIAM INGHAM AND SONS,

WORTLEY FIRE-BRICK, GAS RETORT, SANITARY PIPE, AND TERRA-COTTA WORKS, NEAR LEEDS, YORKSHIRE,

Manufacturers of Glazed Sanitary and Water Pipes, from 2 to 36 inches diameter; Invert Blocks for Sewer Bottoms, Closet-pans, Fire-clay Gas Retorts, Fire Bricks, Chimney Tops, Crucibles, and a variety of Articles in Terra-cotta.

N.B. Superior Fire-clay, for Glass-house Pots and Crucibles.

London Agents—Messrs. CHADWICK and AKEROYD, Willington Stone-wharf, Regent's-park Basin.

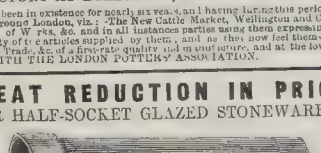
Manchester Agent—Mr. TODD CARR, Arch 14, Birmingham-street, London-road Station.

Barnsley Agent—Mr. JAMES SAGAR, Canal Wharf.

Leeds Stores—Albion-place, Albion-street.

W. I. & SONS beg to inform Architects, Engineers, Contractors, Iron Masters, Builders, &c. that the whole of the above-named Articles are manufactured from the celebrated Wortley Fire-clay, and they (having worked the same for upwards of thirty years) can furnish first-class references.

AYLESFORD POTTERY COMPANY,



BELVEDERE-ROAD, LAMBETH.

MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

The above Company having now been in existence for nearly six years, and having during this period supplied DRAIN PIPES, &c. to some of the largest Works in and around London, viz.:—The New Cattle Market, Wellington and Chatham Barracks, Deptford Dockyard, Her Majesty's Commissioners of Works, &c. and in all instances parties using them expressing themselves satisfied therewith,—take this as a fair test of the quality of the articles supplied by them, and as they now feel themselves established as Potters, beg to offer their goods to Contractors the Trade, &c. of a first-rate quality and manufacture, and at the lowest possible prices, NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERS' ASSOCIATION.

GREAT REDUCTION IN PRICES

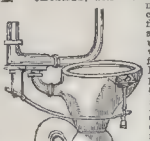
OF WHOLE OR HALF-SOCKET GLAZED STONEWARE DRAIN-PIPES.

AN ILLUSTRATED LIST OF PRICES SENT FREE ON APPLICATION TO

HENRY MILLICHAMP,

MANUFACTURER OF EVERY KIND OF STONEWARE DRAIN-PIPES, BENDS, JUNCTIONS, &c. &c.

BY PATENTED MACHINERY, AND UPON THE MOST APPROVED PRINCIPLE.



MANUFACTORIES—65, PRINCE'S-STREET, LAMBETH, and BRUNTON'S WHARF POTTERIES, COMMERCIAL-ROAD, LIMEHOUSE.

SUPERIOR STONEWARE GLAZED

PIPES of a quality not to be surpassed.—E. and W. STURGE respectfully invite attention to the very superior character of their stone pipes, which they are confident are such as must give great satisfaction,—the price being also lower than many in the trade, viz. 25 per cent discount off the list for cash. Junction Bends, &c. Pans and Traps of the first quality. Yorkshire Paving, Sinks, Slabs, &c. all at low cash prices.—E. and W. STURGE, Bridge Wharf, City-road.

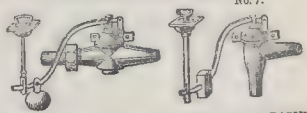
N.B. A small extra charge is made upon goods required to be delivered.—October 1, 1855.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS,

manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 23, Old Fish-street, near St. Paul's, London—Price for Closet and Apparatus complete, from 23s. and perfect action guaranteed.

PATENT DRAIN-PIPES, UNGLAZED,

manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine Elms, London, and at all their Warehouses.



PRICES.

3 inch bore, in 2 ft. 6 in. lengths, at				3d. per foot.
4	"	"	"	4d. "
6	"	"	"	6d. "
9	"	"	"	9d. "
12	"	"	"	1s. 5d. "
15	"	"	"	2s. 6d. "

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture. And it is well known that good earthenware, UNGLAZED, is the oil test material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE

No. 7.

is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under a pressure of 5 to 200 feet: they are found to be less liable to get out of order, and are cheaper than common cocks. Manufactured solely by the patentees,

THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

N.B. No 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price, complete, 14s. 6d. each.

Rent (or purchase) about 200l. per annum. If with stabling it will be preferred.—Full particulars, stating position and terms, to be addressed to H. P. G. care of Mr. Hammond 27, Lombard-street.

TO IRONFOUNDERS and OTHERS.—WANTED TO RENT, a BUILDING suitable for an iron foundry, where power could be had to drive a fan: or an iron foundery already fitted up.—Apply by letter, stating particulars, to R. Office of "The Builder."

TO BUILDERS and OTHERS.—Spacious WORKSHOPS, STABLES, and OUTBUILDINGS room for thirty benches).—The above are situate near Wandsworth-road, a short distance from the goodsstation of the South-Western Railway Company. Rent very moderate. No fixtures to be taken. Apply at the PRINCE OF WALES, Union-road, Wandsworth-road, near the premises.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for body, purity, hardness, and brilliancy of surface; it is unaffected by sulphureous and other noxious exhalations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any sparious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material of which it is made or of prodnct, an imperfect mode of production, or by mixing with the oxide of zinc such substances as Sulphate of Zinc, Chalk, &c. it then produces a very inferior instead of a superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark on Bill by Messrs. BELL, SPENCE, and Co.; when ground and dry, by Messrs. P. R. MORLEY and Co. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAS and Co. Woodside Agents, 62, King William-street City; and by the Manufacturing and Planning Agent, Mr. FREDK. BRABY, Pitzroy Works, New-road. In Manchester and Liverpool by R. CLAY, 8, Mercer-street, who is the acknowledged Painter to the Company for Zinc Paints, and who undertakes painting the interior of houses, dwelling-houses, &c. in Leith, by Messrs. R. ANDERSON and Co. Timber-merchants, and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 28, 56, 112 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paints by contract

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA COTTA to M. H. BLANCHARD late of Coade's original Works, and successor to them in the manufacture of this invaluable material, that has been successfully adopted for nearly a century in this country, by our eminent architects and others. The advancement of our noble Building Art is the only great material that is capable to stand the test. Architectural Embellishments of great and quality that will defy competition. A large Stock of newly-designed Chimney Shafts and Pots, suitable for the various styles of buildings, at very low prices, and worthy of notice.

BLASHFIELD'S PATENT TERRA-COTTA, Manufactured at Mill-wall, Isle of Dogs.—Capitals Consoles, Tracery for Parapets, Balusters, String Courses, Friezes, Bas-relief, Vases, Statues, Chimney-shafts, and all other Architectural Ornament modelled, finished, and burnt in the best manner, and warranted to stand heat and frost, either in Buff or Red-coloured Terra-Cotta; great variety of the said CHARLES BLASHFIELD'S Warehouse and Show-rooms, No. 1, Pyn-street, Pall-mall.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX, Printers, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published in the said CHARLES WYMAN, at the Office of "THE BUILDER," 1 York street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, February 16, 1856.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.
Head-Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to develope its relation to the requirements of trade and manufacture, and its application to the common uses of life. Special courses are arranged in order to qualify School-masters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects: Free-hand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still Life, &c., the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of China and Enamel Painting, Drawing on Wood, Engraving on Wood, and Lithography in Chalk and Colour. The two last classes for female students only.

The Class for Practical Geometry and Perspective, or that for Moulding and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public pictures of the Department.

The school for female students at Kensington, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. M'Ian. Fees per session,—Advanced Class, 2l. and 4l.; Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall-mall, London.

THE SOCIETY of ARTS' ANNUAL COLLECTION of INVENTIONS will be OPENED at the Society's House, John-street, Adelphi, on EASTER-MONDAY, the 24th MARCH. It will comprise models and specimens of recent inventions, whether patented, registered, or not, and of works of recent construction. Articles for exhibition must be forwarded, carriage paid, on the 8th, 7th, or 8th of MARCH.

INVENTORS who purpose to contribute MODELS or SPECIMENS to the Society of Arts' Annual Collection of Inventions, should communicate with the Secretary without delay, as the Exhibition will be opened at the Society's House, John-street, Adelphi, on Easter Monday, the 24th of March.

ST. THOMAS CHARTER-HOUSE SCHOOL of ART, Goswell-street, in connection with May-borough House, Pall-mall.—Evening Classes from Seven till Half-past Nine. Studies:—Class A, Freehand Drawing and Shading, from the flat and the round; Ornament Figure, &c. in chalk and sepia; Painting in Oil and Watercolours, &c. &c. Class B, Practical Geometry and Perspective, Architectural and Mechanical Drawing; Modelling in Clay and Casting.—Terms and further particulars to be obtained of the Secretary.

ARCHITECTURAL EXHIBITION, and Collection of Materials and Manufactures connected with Building, WILL CLOSE on SATURDAY NEXT, Open from NINE till dusk. Admission One Shilling.—All articles exhibited MUST be REMOVED on the 25th or 26th inst.

COMPETITIONS.

TO ARCHITECTS SURVEYORS, AND OTHERS

PLANS, DESIGNS, and DRAWINGS are requested for the ERECTION of TWO CEMETERY CHAPELS, under one roof, together with a Lodge and Entrance-Gates, for the Grantham Burial-Ground (containing six acres of land), to include ground-plans and elevations, and to be accompanied by approximating estimates of the expense. The buildings to be faced with Ancaster stone, and the plinths to be of Mansfield stone. The whole expense (including fittings, &c. of chapels) not to exceed the sum of 1,500l. 10l. is offered for the plan of the chapels and buildings considered to be the best on each the architect shall also contract for the works, and 5l. for the second best. The whole of the plans, &c. to be sent to me, sealed and endorsed, but without any name or distinguishing mark, on or before SATURDAY, the 1st day of MARCH next, inclosing a sealed letter in each case from the person forwarding it.

By order of the Burial Board,
ROBERT HENRY JOHNSTON, Clerk.

Grantham, Feb. 5, 1856.

LIVERPOOL FREE PUBLIC LIBRARY and MUSEUM.—TO ARCHITECTS. The Council of the Borough of Liverpool are about to ERECT a BUILDING for the purposes of the FREE PUBLIC LIBRARY and the DERBY MUSEUM, and offer a premium of One Hundred and Fifty Guineas for the best Design, and One Hundred Guineas for the second. The Designs are to be sent in on or before SATURDAY, MAY 31. Copies of the printed conditions and instructions to Architects, competing; and lithographed plans and sections of the site, may be had on application to Mr. J. STUART DALTON, Librarian, Free Public Library, Duke-street, Liverpool.

TO ARCHITECTS, &c. — PLANS for a NEW WORKHOUSE for BOLTON UNION.—The Guardians of the Poor of the Bolton Union are desirous of obtaining PLANS, SECTIONS, and WORKING DRAWINGS, for the ERECTION of a WORKHOUSE, to accommodate 1,000 inmates, the cost of the buildings not to exceed 15l. per head. A premium of 50l. will be awarded for the best, and 25l. for the second best plan, but the Guardians will not be responsible for any payment for unsuccessful designs. The plans of the two successful competitors to be the property of the Guardians, who shall not be bound to accept any of the several competitors for carrying out the undertaking. The designs must be sent in under seal, without name, and with a private mark or motto thereon, accompanied by a letter under cover and sealed, containing a corresponding mark or motto, and the designer's name and address. To be delivered on or before MONDAY, the 7th APRIL, 1856.

JOHN WOODHOUSE, Clerk to the Guardians.
Union office, Acresfield, Bolton, February 15, 1856.

GRANTHAM BURIAL BOARD.—EXTENSION of TIME for PLANS, &c.—The period for sending in Plans for Chapels, Lodge, and Entrance Gates, is EXTENDED to SATURDAY, 22nd MARCH. Plans are also requested for PLANNING the GROUND and LAYING OUT the ROADS and WALKS therein; roads as constructed on Land not exceeding 6 Acres, to be in the same time, for which additional premium of 5l. is offered. The ground is an oblong square of 220 yards by 132 yards. Entrance west.—By order of the Board,
ROBT. HY. JOHNSTON, Clerk.

Grantham, February 20th, 1856.

TO ARCHITECTS AND SURVEYORS.

THE COMMITTEE for BUILDING NEW NATIONAL SCHOOLS for LUTON, Beds, are desirous of receiving DESIGNS in COMPETITION for the ERECTION of such SCHOOLS. A plan of the site, with further particulars may be known on application by letter only, enclosing one postage stamps, to Mr. D. B. STALKER, National Schoolmaster, Luton.

CONTRACTS.

CHORLEY IMPROVEMENT.—SEWERAGE TO BE UNDERTAKEN.—The Chorley Improvement Commissioners hereby give Notice, that they require to receive TENDERS from parties willing to undertake the following Contract:—

CONTRACT, No. 3.—For Supply of Cast-Iron Street Gullies.

Forms of Tender may be obtained on application at the Commissioners' Office, Chorley; or at the Offices of ROBERT RAWLINSON, C.E. 34, Parliament-street, Westminster.—Sealed Tenders to be delivered at the Commissioners' Office, Chorley, by TWELVE o'clock, on SATURDAY, the 22nd of MARCH next, endorsed "Tenders for Gullies, Contract No. 3."

(Signed) RICHARD JACKSON, Clerk to the Chorley, February 14, 1856. Commissioners.

BURLEY-IN-WHARFEDALE (Yorkshire) SEWERAGE WORKS. The Local Board of Health for the district of Burley-in-Wharfedale hereby give notice, that they are prepared to receive TENDERS from competent persons for MAKING and FINISHING certain NEW SEWERS, MAIN-HOLES, GULLIES, and other WORKS required for the sewerage and drainage of their district. Duplicate copies of specifications, detail drawings, and specifications may be seen at Burley, on application to the undersigned: also at the Offices of Mr. J. M'LANDSBOROUGH, Civil Engineer, 34, Darkgate, Bradford, from whom printed forms of tender, and any further information may be obtained. Tenders, properly sealed and endorsed, must be delivered to the undersigned, on or before FRIDAY, the 7th day of MARCH next. The Local Board are not bind themselves to accept the lowest or any Tender.—By order,
EDWARD BRUMFITT, Clerk to the Board.
Burley-in-Wharfedale, near Otley, 13th February, 1856.

CONTRACTS.

ORDNANCE CONTRACT for AGRICULTURAL DRAINAGE.—Sealed Tenders addressed to the Director General of Contracts, War Department, Pall Mall, London, will be received until TWELVE o'clock on FRIDAY, 29th FEBRUARY instant, from parties willing to Contract for the AGRICULTURAL DRAINAGE of the SPACES and PARADES between the battalions and ground adjoining, at the CAMP at ALDERSHOT. Specifications and forms of Tender, together with any further information required, may be obtained on application to Mr. DREW, Clerk of Works, Royal Engineer Office, Aldershot Camp, on and after MONDAY next, the 18th instant. The Tender to state the price at per acre, and to be endorsed, "Tender for Agricultural Drainage at the Camp at Aldershot." The War Department reserves the right of rejecting the whole or any of the Tenders.

Royal Engineer's Office, Aldershot, Feb. 13, 1856.

ORDNANCE CONTRACT.—To BUILDERS and CONTRACTORS.—Sealed TENDERS will be received by the Director-General of Contracts, War Department, Pall-mall, London, until TWELVE o'clock on MONDAY, 10th MARCH next, from parties willing to contract for the ERECTION of a LAND TRANSPORT ESTABLISHMENT at the Camp, Aldershot. Plans may be seen, and specification and form of Tender obtained on application to Mr. BAKER, Clerk of Works, Royal Engineer Office, Camp, Aldershot, on and after MONDAY next, the 25th inst. The Tender to be endorsed, "Tender for Land Transport Establishment, Aldershot." The War Department reserves the right of rejecting the whole or any of the Tenders.

War Department, Aldershot Camp, 20th February, 1856.

THE LOCAL BOARD of HEALTH for the District of WATFORD are prepared to receive TENDERS for the MAKING and CONSTRUCTING certain SEWAGE TANKS at the Outfall of their district, near the Town of Watford. The plan and drawings and specification may be inspected, the further particulars obtained, by application, at the Offices of JAMES PILBROW, C.E. Tothenham. The specification and conditions of contract may be had upon payment of 5s. Tenders to be sent in on or before MONDAY, the 25th instant, endorsed "Tender for Sewage Tanks."—By order of the Board,
JOHN SEDGWICK, Clerk.

Board-room, Watford, February 8, 1856.

TO BUILDERS AND OTHERS.

THE JOINT BURIAL BOARD for the TOWNSHIP and PARISH of FOLKESTONE, in the county of Kent, are desirous of CONTRACTING for BUILDING and FINISHING, at the New Cemetery, near the Foord, TWO CHAPELS, a Porter's Lodge and Appurtenances, and the Boundary Wall, and for providing and fixing the Entrance-gates, &c. Persons willing to Contract, may see the plans and Specifications at the Office of JOSEPH MESSENGER, Esq. Architect to the Board, Bouverie-square, Folkestone, between the hours of TEN and FOUR on any day next instant. Sealed Tenders (marked "Tender for Buildings at Folkestone Cemetery") for executing the whole or any of the works, are to be left at my Offices in Church-street, Folkestone, not later than FOUR o'clock in the Afternoon of TUESDAY, the 11th day of MARCH next. It is stipulated that it shall not be incumbent on the Board to accept the lowest or any Tender.—By order of the Board,
Folkestone, 12th February, 1856. RICHARD HART, Clerk.

TO CONTRACTORS and BUILDERS.—The Board of Works for the Greenwich District, are requested to receive TENDERS from Contractors for making the requisite ENTRIES from HOUSES and BUILDINGS into the MAIN SEWERS in the DISTRICT. Further particulars may be known on and after MONDAY, the 25th instant, at the Clerk's Office, 1A, Burney-street, Greenwich, where all Tenders for the above must be sent in, sealed up and endorsed, "Drainage Tender," at or before FOUR o'clock in the afternoon of TUESDAY, the 4th of MARCH next. By order,
Greenwich, February 21, 1856. E. W. JAMES, Clerk.

BOARD of WORKS for the HOLBORN DISTRICT.—The Board will meet at the Workhouse, in Red Cross-street, Cripplegate, on MONDAY, the 3rd of MARCH next, at SEVEN o'clock in the afternoon precisely, to receive separate and distinct proposals in writing, sealed up, from persons willing to undertake CONTRACTS for one year, respectively as follows:—First, for Removing the Dust, Ashes, Dirt, Shavings, Rubbish, Bricks, Oyster-hulls, Decayed Vegetables, and all Refuse Matter, from the Houses of Residents and Inhabitants in Lincoln's-inn-fields, and the Liberty of Old Bedford-yard), and second, for Contracting the Ship and Street-sand Pits, when and where required, and the Supply of Sand to the Inhabitants, Shipowners

CONTRACTS.

WESTBURY CEMETERY.—To BUILDERS and OTHERS.—The Burial Board of the Parish of Westbury are desirous of receiving TENDERS for BEDING on their proposed ground TWO CHAPELS, a LODGE, and also for CONSTRUCTING the BOUNDARY WALLS, laying out, levelling the land, with paths, &c., according to the plans and drawings prepared for that purpose by Mr. E. G. BRUTON, of Oxford, the Architect. The plans, drawings, and specification may be seen at my office, in Westbury, and at St. Mary's Chapel, in the Cemetery, Oxford, between the hours of 10 a.m. and 3 p.m. until the 3rd day of MARCH next, and the Board will not object to receive Tenders from the separate trades, or for the whole or any part of the works; but they do not bind themselves to accept either of them, or the lowest Tender. Tenders are to be forwarded to me on or before the 10th day of MARCH next, marked "Tender for the Cemetery." Security for the due performance of the work to be prepared at the expense of the contractor will be required.

HENRY FINNIGER, Clerk to the Board.

Westbury, 11th February, 1856.

THE MARCH LOCAL BOARD of Health are desirous to receive TENDERS from competent persons willing to UNDERTAKE any of the WORKS mentioned in the following CONTRACTS for the Drainage and Water Supply of the District:—

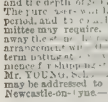
CONTRACT A.—Sewerage and Drainage Works.

CONTRACT B.—Well-sinking, Brick Tower, and Engine-House.

CONTRACT C.—A Steam-Engine, Wrought-iron Tank, Cast-iron Pipes, Pipe-laying, and Sundry Ironwork.

The plans and specification may be inspected at the Office of the said Local Board in MARCH. Duplicate copies may be seen and printed forms of Tender and further information may be obtained, on application at the Office of Mr. R. REYNOLDS ROWE, Solicitor and Architect, 19, Emmett-street, Commercial-road, Peterborough, and Bank-chambers, Bridge-street, Peterborough. Sealed Tenders, properly endorsed, are to be delivered at the Office of the said Board, not later than SATURDAY, the 8th day of MARCH, 1856. The Local Board do not bind themselves to accept the lowest or any of the Tenders.—By order,

THOS. T. ELLIOTT, Clerk to the Local Board.

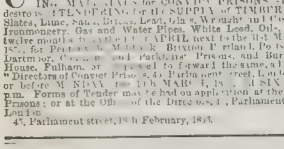


March, Isle of Ely, February 11, 1856.

TO CONTRACTORS and OTHERS.—The Committee of the BUILDING CHURCH at BYKER, Newcastle-on-Tyne are desirous of receiving offers for the PURCHASE of the STONE on the site. The superficial extent is one acre, and the depth of the stone considerable, with very little facing. The pure stone will have to work out the stone within a limited period, and to comply with other conditions as the committee may require. Besides the ordinary modes of conveying away the stone, the premises have the facility of making an arrangement with the Newcastle and Carlisle Railway, for a siding, which passes very close to the quarry, and which communicates with the River Tyne. Mr. CLIFFORD or Mr. YOUNG, Solicitors, Byker, will show the stone, and offers may be addressed to the Rev. T. R. GREEN, St. Mary's place, Newcastle-on-Tyne.—Byker, Feb. 5, 1856.

CONTRACT for the SUPPLY of BUILDING MATERIALS for CONVICT PRISONS.—Persons desirous of TENDERING for the SUPPLY of TIMBER, Deals, Slates, Lime, Sand, Bricks, Lead, Glass, Wrought-iron, Iron, Ironmongery, Gas and Water Pipes, White Lead, Oil, &c. for twelve months from the 1st APRIL next to the 31st MARCH, 1857, for Pentonville, Millbank, Brixton, Parkhurst, Portsmouth, Dartmoor, Chatham, and Parkhurst Prisons, and Surbiton House, Fulham, are desired to forward the same, addressed, "Directors of Convict Prisons, 54, Parliament-street, London," on or before 10 o'clock in the MAID of the following day, viz., 11th inst., p.m. Forms of Tender may be had on application at the several Prisons; or at the Office of the Directors, 54, Parliament-street, London.

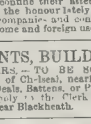
54, Parliament-street, 18th February, 1856.



KIMBERLEY'S NEW PATENT SCAFFOLDING BRACKET entirely supersedes the old and ever troublesome cord. It may be made of iron, kind in Wrought Iron screwbolt, very cheap, and it is next to no trouble ever when in use. They are greatly admired, and require time only to supplant entirely the usually uncertain cord. Bricks, with full particulars, by post. The whole Bricklaying Trade and others are in want of the Patent, and have required for the last century.

London Agents:—

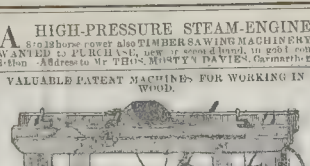
Messrs. PUGH & CO. 13, King-street, Snow-hill, London. See also KIMBERLEY'S Patent Bit or Spring Chisel, Screws, Casement, and Iron Stock Locks, Bench Screws, &c. &c.



MACHINERY.—SAWING, PLANING, and MOULDING

SAMUEL WORSNAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Tenoning, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they are at all times on short notice to supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the principal Companies and Contractors in the world with their Machines for home and foreign use.

TO TIMBER MERCHANTS, BUILDERS, CONTRACTORS, and OTHERS.—TO BE SOLD, a PLANING-MACHINE (by Worsnam, of Chelsea), nearly new; or would be exchanged for Timber, Deals, Battens, or Prepared Flooring. It may be seen at the Yard, next the Clerk of the Works, Victoria-road, Old Charlton, near Blackheath.



JOHN PARKIN and CO. late BLAKE and PARKIN, NEW MEADOW STEEL WORKS, SHEFFIELD, MANUFACTURERS of CIRCULAR and MILL SAWS, IMPROVED CAST-STEEL FILES, for the use of engineers and smiths, PATENT TEMPERED MACHINE KNIVES and CUTTERS, manufactured for making or cutting wood, for cutting paper, iron, stone, leather, &c. made and fitted in connexion with the trade. Also Warranted to work with a harder and finer edge than any others of the kind.

INVENTORS of COKE-ANNEALED CAST-STEEL for lathe, piston-rods, &c. MANUFACTURERS of RAILWAY SPRINGS, BLISTER, SHEAR, and CAST STEEL, &c.

A HIGH-PRESSURE STEAM-ENGINE, 8-horse power also TIMBER SAWING MACHINERY, WANTED to PURCHASE, new or second hand, in good condition. Address to Mr. THOS. MORTYN DAVIES, Carmarthen.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

SASH AND MOULDING MACHINE.

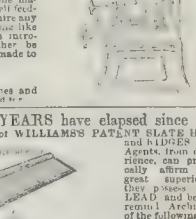
PRIZE MEDALS have been awarded to these celebrated machines, both by the Great Exhibition in London, and many scientific institutions. They are extensively used throughout the United Kingdom, by joiners, contractors, coach and cabinet makers, railway carriage and wagon builders, machinists, agricultural implement makers, shipbuilders; and also by the British and Foreign Governments. The planing and moulding machine, tenoning, mortising, grooving, beading, sawing, and boring. These machines are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.—Sold only by WILLIAM FURNESS, Patentee, 70, Lark-lane, Liverpool, from whom full particulars may be obtained.

HART AND SON,

IRONMONGERS AND MANUFACTURERS,

53, 54, 55, & 57, WYCH-STREET, STRAND,

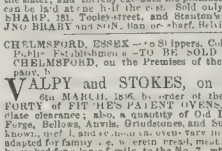
London.



PULPIT LIGHTS, LATCHES, BELL-PULLS, &c.

Specimens at the Hardware Court, Crystal Palace, Sydenham.

Illustrated Price-catalogues post free on application.



NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinet-makers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongers' Establishment, 28, Wailing-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine, and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery constructed to

SEVERAL YEARS have elapsed since the introduction of WILLIAMS'S PATENT SLATE HIPS and RIDGES. The Agents, from experience, can practically affirm the great superiority they possess over LEAD and beg to remind Architects of the following advantages:—

WILLIAMS'S PATENT RIDGE is equal in durability to Lead; its appearance surpasses it. It is unaffected by the weather; it offers no temptation for theft; it prevents damage to new slating, because it is fixed by the slater, and thereby excludes the plumber from the roof; and can be laid at one half the cost. Sold only by JAS. and JNO. SHARP, 181, Tooley-street, and Stanton's Lower Wharf; and JNO. BRADY and SON, Stanton or Wharf, Belvidere-road, Lambeth.

CHELMSFORD, ESSEX.—80 Sippers, Colonists, Schools, and Public Establishments.—TO BE SOLD by AUCTION, at CHELMSFORD, on the Premises of the Patent Oven Company, by

VALPY and STOKES, on THURSDAY, the 6th MARCH, 1856, by order of the Proprietors about FORTY of FIT HER'S PATENT OVENS, in lots, for immediate clearance; also, a quantity of Old Iron, Smiths' Tools, Forge, Bellows, Anvils, Grindstones, and Sundries. These well-known, useful, and economical ovens vary in size, from the No. 1, adapted for family use, to oven bread, meat, and vegetables may be cooked for a large family, to the No. 7, which is calculated to cook for 150 persons daily; and they are constructed in a most substantial manner of cast and wrought iron, with the best work man-ship. Worthy the attention of shippers and colonists.—Catalogues may be obtained of the Auctioneers, Chelmsford, Essex.

GAS COOKING-STOVES, for large or small establishments.—DEANE, DRAY, and CO., Arthur-street East, London-bridge.

Testimonial respecting the Crystal Palace Kitchen, as fitted by DEANE, DRAY, and CO.

8, Bridesmount-place, Hampstead, March 8th, 1855.

Gentlemen,—I have great pleasure in bearing testimony to the capabilities of your extensive range Gas Cooking Apparatus, being the largest and most perfect yet in use. Suitable for hotels, mansions, club houses, private houses, and the army having cooked in one day 1,000 joints and many tons of hams, veal cutlets, lamb, tongue, &c.; roasting in one department a baron of beef weighing 230 lbs. in nine hours, into other apartments, preceded by a dinner, for Prince Albert and the foreign ministers. The whole has been in full operation for ten months, and are now in as perfect order as when first finished. They have not cost one shilling for repairs.

I am, Gentlemen, yours respectfully,

EDWARD HORNE.

Messrs. Deane, Dray, and Co.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post. DEANE, DRAY, and CO., corner of the Monument, London-bridge. Established A.D. 1700.

BUILDINGS HEATED by HOT WATER. G. B. COOPER, IRONWORKS, 126, DRURY-LANE, Ranges, Hot Plates, Gas Cooking Apparatus, Baths, &c. Ornamental and Constructive Ironwork.

HEATING BY  HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description and the most extensive dimensions can be efficiently warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. where they have put their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

CAST STEEL.—Messrs. NAYLOR, VICKERS, and CO. RIVER DON WORKS, SHEFFIELD, are now prepared to execute orders for CAST STEEL INGOTS, from 3cwt. to 6,000 each, Locomotive Crank Axles, Tyre Bars without welding, Shafts, Cranks, Axles, and every description of heavy forgings in Steel, to pattern.—For further particulars, apply as above.

GASELIERS in GLASS and METAL.—The increased and increasing use of Gas in private houses has induced WILLIAMS BURTON to collect from the various manufactories all that is new and choice in Pendants, Brackets, and Chandeliers, adapted to offices, passages, and dwelling-rooms, as well as to have some designed expressly for him; these are ON SHOW over his EXTENSIVE LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with the economy they afford to make this most valuable agent the cheapest and most remarkable in the kingdom, viz. from 12s. 6d. to eight guineas.

THE BEST SHOW of IRON BEDSTEADS in the KINGDOM is WILLIAMS BURTON'S. He has FURNISHED a ROOM solely to the EXCLUSIVE SALE of Iron and Brass Bedsteads and Children's Cots, with appropriate Bedding and Mattresses. Common Iron Bedsteads from 16s.; Patent Folding Bedsteads, from 19s.; Portable Iron Bedsteads, fitted with dovetail joints and patent sacking, from 17s. 6d.; and Cots, from 30s. each. Handsome ornamental Iron and Brass Bedsteads, in great variety, from 2l. 7s. 6d. to 15l. 15s.

The alterations and additions to these extensive premises already by far the largest in Europe, have occupied the whole of last year, are of such a character that the entire RIGHT HOUSE is devoted to the display of the most magnificent Stock in GENERAL HOUSEFURNISHING, including Cutlery, Nickel Silver Plated Goods, Baths, Brushes and Turnery, Lamps and Gaseliers, Iron and Brass Bedsteads, and Bedding, so arranged in SEVEN LARGE ROOMS, as to afford purchasers in such large premises in the selection of goods that cannot be hoped for elsewhere.

Illustrated Catalogues sent (per post) free.

A

FIRST-CLASS MEDAL

WAS AWARDED TO

F. EDWARDS, SON, and CO.

AT THE

PARIS EXHIBITION,

For the SPECIMENS they exhibited of

DR. ARNOTT'S

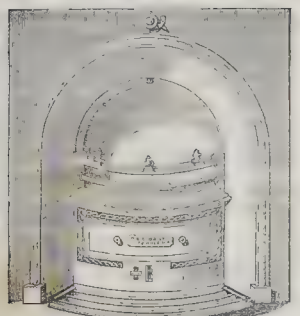
SMOKE-CONSUMING GRATE,

AND SMOKE-CONSUMING

COOKING APPARATUS.

F. EDWARDS, SON, and CO. beg to inform the public that their STOCK of GRATES is ENTIRELY REFORMED, and consists SOLELY of GRATES on the SMOKE-CONSUMING PRINCIPLE. A large variety in real Bronze, Ormolu, Steel, and Berlin Black, suitable for Drawing rooms, Dining-rooms, and Libraries, from 7*l.* to 50*l.*

The following are the prices of those for ordinary use :—



For Bed-rooms, Offices, &c.		For Sitting-rooms, Parlours, Bed-rooms, Offices, &c.	
1 foot 7 inches wide, 12-inch fire	£3 10 0	2 feet wide and under	£4 0 0
1 foot 9 inches wide, 14-inch fire	3 12 6	Above 2 feet wide, and not exceeding 3 feet 6 inches..	4 10 0
The above Grates can be increased in width to that of any fire-place by iron or slate slips ; iron slips supplied at 6*d.* per inch.		,, 3 feet 6 inches ,, 3 feet	5 0 0
		,, 3 feet ,, 3 feet 6 inches..	5 10 0

By the Grates on this principle, as properly constructed by F. Edwards, Son, and Co smoky chimneys are avoided, an agreeable fire is maintained, with one-half the trouble attending the ordinary grate, and a saving of from forty to fifty per cent. is effected in the consumption of fuel.

PROSPECTUSES, WITH FULL PARTICULARS AND TESTIMONIALS, SENT ON APPLICATION.

To be seen in daily operation at the Show Rooms, 42, Poland-street, Oxford-street, London.

DR. ARNOTT'S SMOKELESS GRATES,

For the manufacture of which D. and E. BAILEY obtained the SILVER MEDAL at the PARIS EXHIBITION. The above excellent invention has been carefully modelled and manufactured by D. and E. BAILEY, 272, Holborn, who having experienced great difficulty in keeping pace with the increased demand for the above Stoves, have now made such arrangements as will enable them to supply their customers with the Smokeless Grates, of ordinary dimensions, from their stock on hand, which consists of various designs in black, bright, and polished steel, richly decorated with ormolu ornaments.

The great advantages of these Stoves over all others are –

1st. The entire absence of smoke.

2nd. An immense saving in fuel.

3rd. A cheerful fire, with simple means for regulating the heat.

4th. Will burn night and day, requiring only to be supplied with fuel twice in twenty-four hours.

For invalids' bed-rooms, these stoves will be found invaluable.

Prices and Prospectuses may be obtained on application where the Smokeless Grates may be seen in daily use.

D. & E. BAILEY, IRONMONGERS,

272, HOLBORN, LONDON.

PARKIN AND MARSHALL,

GENERAL MERCHANTS, AND MANUFACTURERS OF

TABLE CUTLERY, PEN and POCKET KNIVES, SCISSORS, RAZORS, ELECTRO-PLATED WARES, FILES, SAWS, EDGE and JOINERS' TOOLS, AUGURS, STEEL, &c. &c.

TELEGRAPH WORKS, SHEFFIELD.

OFFICES– { NEW YORK–71, JOHN-STREET
BOSTON–25, KILBY-STREET, U.S.
MELB URNE–94, COLLINS-STREET EAST.

CORPORATE MARK XLALL. Granted by the Cutlers' Company, 1789.

Messrs. PARKIN and MARSHALL have also pleasure in stating that they are appointed Sole Wholesale Agents for the Sale of the undernamed Articles, manufactured by Mr. ENOCH OLDFIELD TINDALL, Iron Works, Scarborough, viz : TINDALL'S PATENT PORTABLE MANGLES, WASHING AND WRINGING MACHINES, NAPKIN PRESSES, COOKING RANGES, LAUNDRY STOVES, SANATORY TRAP AND GRATE, CHAFF CUTTERS, OAT, BARLEY, MALT, AND LINSEED MILLS, BEAN MILLS, ORCHARD BREAKERS, PORTABLE SAW-MILLS, TURNIP CUTTERS, &c.

THE PATENT COOKING RANGES AND ROASTERS are now amongst the most complete and inexpensive before the Public, and are aptly termed the Antiquated Ranges of the Century.

THE IMPROVED LAUNDRY STOVE will heat Fifteen Flats at once, occupies only 12 inches in space, is removeable from one Room to another, and will be found invaluable in Public Hospitals, Infirmaries, Laundries, and Private Families.

E. O. T.'S SANATORY GRATE AND TRAP is now acknowledged to be the best and most secure from effluvia (as well as not being liable to fire, &c, and requires no cleaning) that has been introduced.

THE MANGLES AND WRINGING MACHINES have been introduced into the Royal Household, most of the Public Laundries, and in the most among thousand Private Families, as clear testimony to their efficiency and superiority over all others.

THE OAT BRUISERS AND CHAFF CUTTERS, like the above, combine cheapness with the greatest simplicity of construction, and only need to be tried to be appreciated. They effect great saving and should be in every stable.

Drawings of Mangles, &c. with Testimonials, can be had on application at Telegraph Works, Sheffield, or of the Retail Agents, who are appointed in almost every principal Town in the United Kingdom.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of from the timber usually required.—4th. It can be easily applied by any unpractical person.—5th. From its lightness, will bind on only about 28 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under water, clean, or tiles, it is a most effective non-conductor for INODOROUS FELT, or damp walls and for damp floors under carpets, at 1*l.* per 100 feet. FELT ONE PENNY per Square Foot.

CROGGON and CO.'S PATENT FELT FOR SEA BEDS, for Coach-house bottoms, &c. and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. preventing the radiation of Heat, from 25 per cent of Fuel and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

'ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

TYERMAN'S PATENT HOOP-IRON BOND FOR BUILDING PURPOSES.

TARIFF OF PRICES
Beyond the current Price of Hoop-iron.

The undermentioned Gauges are kept in stock; but any Gauge or width will be supplied within a few days, at a small advance on the following prices:—

Gauge.	In. wide.		Per 1,000 ft.
No. 16	.. 1¼	..	7s. 6d.
15	.. 1½	..	7s. 6d.
15	.. 1¾	..	8s. 0d.
15	..	..	8s. 6d.
15	..	..	9s. 6d.

Plan and Elevation of Bond, showing Position and Form of the Claws.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 1¼ inches on both sides alternately, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming reversed claws, which are so bent, that a direct end grain of the iron is presented longitudinally, offering most powerful and effectual resistance, and which become, when built into the brickwork, embedded in the structure, preventing the possibility of longitudinal escape, and a complete and permanent bonding together of the whole building is thereby obtained.

Patentee—FREDERICK TYERMAN, Architect, 44, Weymouth-street.

Sole Manufacturers—THOMAS PERRY and SONS, Government Contractors, Bilston.

London Depôt—463, OXFORD-STREET.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

PARIS EXHIBITION AWARD TO

COTTAM and HALLEN, of Winsley-street,

The original Inventors of the PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, and to which they have made important additions, the main features of the same being explained in the following description and Engraving.

A represents the Patent Halter-guide and Collar-rein, the tail of which is taken to the back of the manger-works with freedom and ease up or down the guide-bar, and is noiseless in its operation, as also a sure preventative against the most restive horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, made of galvanized sheet-iron, light and durable.

D. The Patent Saddle and Harness Bracket combine; can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers; Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

The New Illustrated Catalogue for 1856 gratis on application. Estimates and Designs.

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

Estimates given for any description of Wrought or Cast Iron Work

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE.

Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cranes, Axles, and

STEWART'S PATENT CAST-IRON GAS and WATER PIPES.

Office, No. 7, Side-lane, London.

TO MANUFACTURING CHEMISTS, BUILDERS, &c.

WILLIAM DYER, PLUMBER, &c. No. 4, HIGH-STREET, BROMLEY, Middlesex.—Burning or uniting lead to lead, by Delbruck's Patent process. It is highly recommended for chemical vessels, repairing flat lead gutters, or laying of new, where solder is required, or making tanks, cisterns, &c.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 145, Regent-street, London.

IRONMONGERY.

PFEIL AND STEDALL.

THE LARGEST STOCK AT

THE LOWEST PRICE,

5 AND 6, BROAD-STREET, BLOOMSBURY.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbruck's Patent Antogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire, Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.

GLOVER, BROS.,

solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, either structural or ornamental.

Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Hook-safes and Strong Rooms, Tanks and Boilers, and every description of ironwork to specification, and the work executed with every attention to quality and despatch.

GLOVERS' IRONWORKS,
68, DRURY-LANE, and CHARLES-STREET.

IMPERIAL IRON FOUNDRY, and ECONOMIC RANGE MANUFACTORY.

Three ft. wide	£6 10
Three ft. three in	7 0
Three ft. six in.	7 15
Three ft. nine in.	9 0
Four ft.	10 10
Four ft. six in.	13 12
Five ft.	14 14

Covings, 5s. per foot.
Fixing, 3s. per foot.

This valuable KITCHEN RANGE, the Manufacturer has much gratification in stating, has been in use several years, and given the utmost satisfaction. It may be used either with the fire open or closed, thereby avoiding the objection so naturally felt against having the fire at all times shut up, which is well known to generate a close unwholesome vapour.

The Prize Medal and Honourable Mention was awarded to this Range at the Great Exhibition of 1851.

To be seen in operation at the Manufacturer's.

J. SHERWIN, 69, TABERNACLE-WALK, FINSBURY.

Castings of every description in Loam or Sand.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trades to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 2½d. per inch, and upwards.

Register Stoves, 5d. 6d. 7d. 8d. and 9d. per inch.

Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:—

3 ft., 3l. 16s.; 3 ft. 6 in., 5l.; 4 ft., 3l. 15s.

3-feet Cottage Ranges, with ovens and back boilers, 25s. each.

3-feet self-acting ditto, ditto, 34s. each.

Air Bricks, 4s. per doz.

Best Town Glue, 5½. Ditto, Scotch, 6½ per cwt.

Best Fine Cut Clasp and Rose.

Dr. Arnott's Ventilators, 4s. 6d. each.

An extensive Assortment of Air, rod, loop, and sheet iron Brick Moulds kept in stock. Any size made to order.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that **FOUR-FIFTHS** of the **ROUGH PLATE**, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by **HARTLEY'S PATENT**—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for **RIDGE and FURROW ROOFS**, giving a **SPAN** of **TWELVE FEET**, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders **BLINDS UNNECESSARY**, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1856.

THE NEW PATENT

INTERLOCKING CURVILINEAR REVOLVING IRON SHUTTER

IS GREATLY SUPERIOR TO ALL OTHERS FOR

LIGHTNESS, STRENGTH, SECURITY, DURABILITY, AND EASE,

AND ALSO MUCH CHEAPER.

MANUFACTURED BY

BUNNETT AND CO. ENGINEERS, FOUNDERS, &c.

ORIGINAL PATENTEES OF REVOLVING IRON SHUTTERS, No. 26, LOMBARD-STREET, LONDON; and DEPTFORD, KENT.

The edges of each lath are accurately turned by powerful PATENTED MACHINERY, and slide endways into each other, FORMING A COMPLETE HINGE THROUGHOUT, interlocking so effectually that no force can separate them; and if made of the best galvanized iron, are almost indestructible.

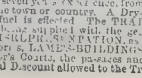
A CHEAPER MODIFICATION FOR WAREHOUSES, COTTAGES, PORTABLE BUILDINGS, &c. ALSO FOR EXPORTATION.

PATENTEES OF METAL SASH-BARS AND MOULDINGS.

Descriptive Illustrated Prospectuses and all necessary information forwarded on application.

SNOXELL'S

PATENT REVOLVING WOOD AND IRON SHUTTERS,



WITHOUT MACHINERY,

96, REGENT-STREET, AND AT HIS STEAM WORKS, 135, OLD-STREET.

Testimonials from Architects, Bankers, &c of their security and durability, forwarded.

MANUFACTURER OF METALLIC DRAWN SASH-BARS, STALL-BOARD PLATES, &c.

CHEAP AND DURABLE ROOFING.

By Her Majesty's  Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and only Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANIC GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy with safety. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, will be sent FREE to any part of the country on receipt of seven penny postage stamps. Architects, Builders, and Gentlemen who have not already used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully invited to send in their orders DIRECT to the FACTORY, as the present means of home supplied with the genuine article, and in lengths best suited to their requirements. Lengthened experience has proved that roofs covered with the Felt manufactured at the New Houses of Parliament, and other buildings by F. McNEILL and CO.'s Manufactory, LAMB'S-BUILDINGS, BUNHILL-ROW, are perfectly secure from leakage, and may be seen at the Factory, about to new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

PLATE-GLASS.—Builders can be supplied with PLATE-GLASS of any size AT VERY REDUCED PRICES, upon application to the SOHO PLATE-GLASS COMPANY, 9, Soho-square

SUPERIOR BRITISH PLATE-GLASS AT VERY LOW RATES.

THE UNION PLATE-GLASS COMPANY having recently completed very considerable improvements and additions to their works, take the opportunity of informing their friends that they will now be able to supply orders without delay; and respectfully invite the attention of the trade generally to the low rates at which their now much-esteemed manufacture is sold.

Lists of prices may be obtained on application at

The Works, Pocket No. 8, St. Helen's, Lancashire.
The Warehouses, Piccadilly, Manchester

									48										

The Author will endeavour in the several chapters to define the apparent origin, and trace the development of the several styles of Ornament. He will proceed to ascertain the laws which govern those compositions, both those which are general to all styles and those which are peculiar to each. He will further attempt in the 20th chapter to show how, bearing in mind those general laws which he will endeavour to provide the works of nature will be arranged for fresh inspiration, we may yet go forward, and, whilst availing ourselves of the experience of all time, may be enabled to produce works in harmony with our own times, instead of blindly following in the footsteps of the past.

The collection of this vast amount of material has been the labour of many years. On the eve of giving it forth to the world the Author fully feels the difficulty of the task he has undertaken; he trusts, however, less that with this colossal work, and in both engraved in any way with the decorative arts, will have before them an amount of material which does not elsewhere exist in any such ornament form, and in the use of which it will be his endeavour to serve them as a guide.

N.B. The Letterpress will appear at intervals during the progress of the Work. Size, 8vo. royal.

Published by DAY and SON, LITHOGRAPHERS to the QUEEN, 6, GATE-STREET, LINCOLN'S-INN-FIELDS.

THE FREEMASONS' MAGAZINE and MASONIC MIRROR for February, 1856, is now ready. Price 1s.
London: HENRY GEO. WARREN, 2, Red Lion court, Fleet-street; and GEORGE ROUTLEDGE and CO. Farringdon-street.

1 Vol. Handsomely Bound, 21s.

BUILDINGS and MONUMENTS, Modern and Mediæval, being Illustrations of the Buildings of the Nineteenth Century, and of some of the Architectural Works of the Middle Age.
By GEORGE GODWIN, F.R.S.
Editor of the Journal of the Royal Institute of Architects, &c. Editor of "The Builder," &c. &c. &c. Member of several Societies.
With numerous Illustrations.
London: Longman, Brown, Green, and Longmans, Paternoster-row; and Day and Son, 6, Gate-street, Lincoln's-inn-fields.

WOOLRYCH'S METROPOLITAN BUILDING ACT.
This day is published, in 12mo. price 5s. boards,

THE METROPOLITAN BUILDING ACT, 18 & 19 Vic. c. 122; together with such Clauses of the 18 & 19 Vic. c. 120, the Metropolis Local Management Act, as more particularly relate to the Building Act: with Notes, a Glossary of Architectural Terms, and full Index.
By HUMPHRY WILLIAM WOOLRYCH, Serjeant-at-Law.
London: STEVENS and NORTON, H. SWEET, and W. MAXWELL.

The Second Edition, with Corrections and Additions, in 8vo with Plates and Specimens, price 7s. 6d. cloth,

PAPER and PAPER-MAKING, Ancient and Modern.
By RICHARD HERRING.
With an Introduction by the Rev. GEORGE CROLY, LL.D.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

The Builder.

VOL. XIV.—No. 681.

IT is desirable that the various building materials and appliances which form part of the Architectural Exhibition, in Suffolk-street, now about to close, should not have been brought together in vain, but that those engaged in building should remember what they have seen, and inquire of themselves, when opportunities occur, if they cannot introduce this or that improvement, or avail themselves of this or that material. How many of us gaze upon an improvement, admit its excellence, and then forthwith, as if we had never seen it, proceed to work on the old plan.

The evening of Tuesday, the 19th, was set apart at Suffolk-street to give attention to these contributions,—the committee duly appreciating their importance. Mr. Tite had undertaken to make some remarks upon them, but being prevented by Parliamentary duties, Mr. Edmeston, jun. the honorary secretary, took his place, and after two or three preliminary observations, thus proceeded:—

The time and earnest thought expended upon many a design, of even an indifferent character—the labour bestowed, the knowledge necessary, the never-ending education required in the architect—are only, after all, one portion—one small section, of the influences at work to produce a result for you, the Public, Employer, Patron; and it is unquestionably of most vital importance, if there is ever to be a high and universal expression of architectural art in this country, that all this should be understood and appreciated; if ever the day is to arrive when excellence is to be looked for, not only in a few isolated instances,—public buildings, perhaps, and the like, or extraordinary and unusual efforts, but in small streets and cottages, and out-of-the-way places, so that care, propriety, and a thoughtful mind shall be the rule, and not the exception.

Mr. Petit observed in his lecture that the bird, the bee, and the beaver, all in their way occupy a higher position than the human architect in point of wonderful use, ingenuity, and adaptation in their structures; but he pointed out how the efforts of human genius had higher purposes,—a further and higher development of certain noble faculties of mind, in designer and spectator.

In all our lectures thus far it is these higher principles that have been chiefly considered; and we have now to see that there is yet another class of workers in the great cause, who silently, with but little outward ostentation, and with but little or no share in the final result, are, year by year, untiringly applying money, ingenuity, and skill to assist; and if you have done well to inquire into and investigate the principles and design of the completed work, it will be as well, and it is as important, that you should be as fully sensible of all the less apparent efforts which, in their way, are as worthy of study and attention.

It was well that we began with the higher matter, but we cannot have a more appropriate subject for consideration at this our last meeting for the season, than practical evidences like these of what may be done in some of the subsidiary branches of building operation; and some little explanation of the means employed in different cases must tend to increase our respect for the enterprise, talent, and industry of the inventors. Nor let it be supposed that this subject is one in which the public at large have little interest, or one exclusively for the architect's attention only. Why should it be left to the architect to suggest, in every case, the application of this or that new material or contrivance? Why not, while you desire the best design he can give, request him also to apply the newest contrivances, to employ the most suitable materials, even if the house you build is not exactly like all the other houses in the street, and in spite of the kind remarks on your wild vagaries in which your neighbours may indulge? Not only is there often a cold encouragement for such inventions, but there is often an absolute prohibition; and the architect, if he dare step out of the beaten path, is liable to reprehension for jeopardizing the name, the reputation, or mental capacity of his client, or of lowering the value of his property. It is in this, as in other things: let there be a demand for the exercise of good taste and sound principles, and a proper contempt for their deficiency, and that demand will be met. Refuse to accept inefficiency, and there will be no need to prop up ability and professional standing with extraneous aids; and in like manner learn to believe that bricks and mortar, and cement, four-panel deal doors and ceiling cornices, are not all that is necessary to an ordinary work of domestic architecture, and you will have new materials and applications provided for you,—new additions to your comforts and daily enjoyment of living,—you will open the door to a host of inventions and improvements ready and desirous to expand themselves in your behalf, and you will confer a benefit on your age and country, as well as on thousands of intelligent labourers in this great city, and you will besides do somewhat towards getting rid of constructions that will not stand, walls that will settle, and bare and counterfeit productions of all kinds, that are only provided because you will have them, live in them, or buy them.

The several contributions we have to consider class themselves pretty readily under three or four heads; and it will simplify our inquiries if we proceed at once to this division of our subject; and first we may instance what may be called "new material;"—for example, the productions of the Indurated Stone Company, the injected stone by Barrett's patent, the Tamworth bricks, those from the Poole Company, the iron slag, hose applied to pipe uses, the serpentine, and the artificial stones and terra-cottas: all these are either new as building materials, or, not being new, are in so new a form as to be entitled to be considered in that light. We may then examine the contrivances of mechanical ingenuity or construction,—the productions with which utility in its simplest sense has more to do than art; and then those contributions which are complete in themselves, like the beautiful decorations of M. Remon, in the elaborate chimney-piece contributed by Mr. Collmann.

First, then, the new materials. Perhaps nothing comes so distinctly under this head as the transformation of sand, loam, or chalk, into hard and endurable stone, by the Tunbridge Company; and the other process of Messrs. Barrett, by which a soft stone becomes hard as marble, and capable of receiving a polish.

The Tunbridge Company indurate any soft stone by soaking it in a solution of chemically-prepared gas tar and resin; and they had several specimens so prepared in our last Exhibition. Since then, however, they have extended their patent to preparing an artificially-compressed stone: thus sand, loam, gravel, being thoroughly dried and mixed with the solution upon a hot-plate, all ready for use, may be pressed into the mould, and in half an hour the bracket, moulding, piece of ornament, or whatever it may be, is complete, and formed in a hard stone.

Messrs. Barrett's process is similar in some respects, sulphur or some bituminous solution being employed in the same way, and injected by exhaustion of air. The stone is then rubbed like marble, and afterwards polished; and the advantages are an increase of strength and durability. And of equal interest is the artificial stone of Messrs. Ransome, which is made from grains of sand, limestone, marble, or of any similar material, and which becomes an indissoluble, impervious mass, when cemented together by what is in fact a solution of glass, after exposure in a kiln. The solution is made of flint, dissolved in a caustic alkali (soda or potash), at a much higher temperature, in close boilers or cylinders: when mixed with the particles alluded to, it is moulded, dried and burnt to a red heat, and the material has the advantage of contracting hardly at all in the drying. In striking contrast with this is the stone manufactured by Mr. Austin, composed of a strong cement, mixed with powdered stone or grit, and suffered to dry without the assistance of heat. This material has been proved to be of the most lasting character, if sufficient time is allowed in the preparation. As the whole is carefully prepared by hand, and as it is not subject to the contraction or alteration of form in the burning to which terra-cotta is liable, it has in that respect the advantage; and in some descriptions of work it is not a slight one.

Then we have the burnt clays of Mr. Pulham and the Farnley Company: in these the fresh clay is mixed with grit, and then burnt at a great heat; and some of Mr. Pulham's specimens are granulated with a view to obtain a closer imitation of stone; and besides the ornamental uses of this material, it may be applied to steps, paving, floors, &c. The glazed and coloured bricks of the Poole Company are composed of a finer clay still, as a degree of heat is required for glazing which would melt a clay of a common character. The manufacturers lay much stress upon the value of the glaze, but I would suggest that for almost all purposes, except, indeed, when absolutely immersed in water, the unglazed tiles or bricks are most available for architectural purposes.

Nor need the Poole Company consider it an additional recommendation to their excellent material, to say that their bricks are made to resemble stone, or may be marbled, after all that has been said and written these few years past about truthfulness in material and propriety of application. Let the bricks be bricks, and neither stone nor marble, and the company will find that the article will become of infinitely more extended use. A study of the design by Mr. Chamberlain, of Birmingham, Mr. Gray, of Buckingham-street, and others in the exhibition, will show that bricks are wanted to look like themselves, and that they may be used much better and more easily in that way than if made to imitate marble or stone, which they never can do, if their necessary use in small pieces were the only obstacle.

In those artificial stone productions, also, where the forms are obtained by compression in a mould, an imitation of carved stonework would appear inadvisable, since there can be no under-cutting in relief, and a result is obtained which in really carved work would not be tolerated. On the other hand, the font of the Farnley Company looks precisely as if it was copied from a framed work of wood: it cannot but occasion regret if we feel that the care and ingenuity expended are guided by wrong canons of taste, and have found a wrong direction, particularly where the things themselves are so excellent. Let it be remembered in the matter of ornament also, that too little is in every case better than too much; and to quote Mr. Fergusson's admirable Handbook of Architecture, — "All materials are nearly equally good when used honestly, and for the purpose for which they are best adapted, and all become bad either when used for a purpose for which they are not appropriate, or when one material is used in the place of another." Form should always be the clue by which bodies and their properties should be known,—a rule illustrated all through the kingdom of nature; for as Mr. Digby Wyatt observes, "Never does a flower look like a piece of metal, or a piece of timber like a rock."

The bricks from Mr. Arnold of Tamworth, are chiefly noticeable for hardness and great strength: for paving, curbs, and such purposes they would appear valuable additions to similar materials; but the colour of the specimens would appear to interdict their use ornamentally. The inventor, however, advertises the material in blue, red, or strawberry colour; and I am told that Mr. Arnold is making chimney, and if so, there must be a class of goods of firmer texture than we have seen. The cost of production is moderate, and the machinery may produce any number of patterns, as a change of dies is all the alteration necessary.

The material brought again into notice by the Lizard Serpentine Company, is of great beauty, and deserving much attention, and is now to be had in large blocks, of 10 or 12 feet in length.

The upper strata of the serpentine rocks are found to be brittle and unsound, and the energies of this company have been directed to procuring the stone from a considerable depth, where the defects apparently nearer the surface disappear.

This stone is used in the external walling, at the Lizard, in a rough state, where it has stood the test of climate for some centuries. Nor was it unknown nearer home, though it seems to have got into disuse after the early part of the last century. We find the serpentine introduced in a chimneypiece, in Hampton Court Palace, of a dark green colour, and the polish more perfect than the contiguous marble. I must allude to a most interesting set of contributions from Messrs. Chance, of Birmingham, which were sent to these galleries, and afterwards withdrawn in consequence of the discovery of great improvements in the production. The invention consisted in melting a basaltic stone, similar to that of the Giant's Causeway, and running it into moulds; and it was found that the stone could be made to take in this way any required form. The rapid cooling, however, at first allowed, converted the material into a species of slag, but it was soon discovered that a slower process left the character of the stone unchanged, and it has been applied to the ornamentation of houses in some instances already. The chief objection was the colour, opaque and black almost, and which rendered painting necessary; and it was, I believe, in consequence of some process by which a pleasant and agreeable tint could be given, that the specimens were withdrawn.

Messrs. Waithman's hose piping is undoubtedly a new application. It is for purposes similar to the leather hose, with which we are all acquainted, but is not half the price, and is, besides, lighter and less bulky, the best quality of 2-inch hose costing only 2s. per yard. Not only for ships, fire-engines, and out-of-door purposes, is this hose applicable, but also for building purposes and for some others, for which its adaptability might certainly have been overlooked. Thus, it has been used in the application of paint or colour to the front of a house in this way:—a reservoir of the paint or colour is set on the parapet, and the workman uses a hollow brush connected therewith, by means of a length of the half-inch hose; and the consequence is, that he works away with a never-ceasing supply; and if he stays to look about him, we may imagine he will very speedily make a mess of it. The same thing has been done by connecting with the nearest water supply a similarly-made brush — a mop, for carriage-washing—by which there is a constant supply of water, and the sand or grit is continually driven out of the mop, and the carriage is thoroughly washed, and not scratched. I have not heard that the domestic scrubbing-brush has been fitted with this article, but it would be, I dare say, equally easy.

Mr. Magnus's enamelled slate, and Mr. Minton's tiles, are of such acknowledged excellence that it appears unnecessary to make any observations upon them. I believe the process by which the slate is enamelled is a secret: the colour is, however, applied by a great heat, and becomes permanent.

Mr. Minton's inlaid encaustic tiles are a species of mosaic, the pattern being inlaid with clay: his Venetian tiles are made from powdered and coloured clays compressed in metal dies: the pieces are cemented together at the back, and the indented tiles, covered with enamels in different colours.

The iron slag, melted again and turned into moulds, deserves consideration.

Among the contrivances of mechanical ingenuity, there are, perhaps, none marked with a more common-sense adaptation than those by Mr. Jennings, Mr. Botten, Mr. Pierce, Mr. Chappuis, Mr. Moore, and Messrs. Bunnett.

Mr. Jennings's improvement upon the ordinary drain-pipe, by which the pipe can be got at without disturbance, and junctions can be effected, as also his cistern-valve and gully-trap, are excellent, and, like all simple and good things, occasion surprise that they were never thought of before; and, indeed, there is hardly any contribution from this exhibitor without evidence of thought and care, and well deserving attention—especially the sanitary contrivances.* Almost as much may be said of Mr. Botten's contributions, and especially of Underhay's Patent Regulator. Upon similar grounds, Messrs. Bunnett's contributions are worthy of all praise, as are also those of Mr. Moore. Messrs. Bunnett's revolving iron shutter has the peculiarity of rolling either way; that is, it may be shut down either inside or out. The shutter is an example of the assistance afforded by powerful and accurate machinery, which turns up the edge of each slip of iron with such accuracy that when slid endways into each other, a perfect hinge throughout the entire length is formed, working quite smooth and easy; and the pieces of iron are at the same time interlocked so effectually, that the laths will rend across the centre rather than separate.

No exhibitor has come forward more boldly to challenge criticism than Mr. Pierce; and whether we take his small stoves at 11s. 6d. or those of a larger character, they are equally good, and deserving of commendation. They are all upon the principle of using fire-brick lumps as the medium for conducting the heat of the fire, and to warm the fresh air for consumption, instead of using an iron surface, which also warms the air in the room without keeping up any supply of fresh warmed air, so desirable and conducive to health, and which also, by creating what is called a plenum effect, assists to prevent draughts. Mr. Magnus's stove is similar to Mr. Pierce's in principle, but he employs no iron at all, not even for the outer casing, using instead the enamelled slate, which, perhaps, gives him somewhat the advantage, so far as appearance is concerned.

So long as Mr. Pierce confines himself to the common-sense utility of his inventions, we can applaud and admire his industry and talent, but is there not apparent a want of right guidance where the article is made to leave its simplest form, and to receive some moulding for artistic effect? We may give an unqualified and unquestioning approval to the cheap portable oven, sold for 15s. and which strikes us as being as good as it is cheap; while the handsome grate in its margin of alabaster, with its vases and shield, and the iron chimney-piece in the other room, copied from one in stone, in spite of all the labour bestowed upon them, excite a feeling not precisely a pleasurable or satisfactory one. How is this? Is it the absence of that utilitarian feeling enlarged upon by Mr. Petit in his lecture,—a forgetfulness of the maxim he laid down, that "original purposes must not be overlooked in the slightest degree."

There is perhaps no class of manufacture so much in want of improvement in design as the ordinary stoves in common use.

M. Chappuis's daylight reflectors are well known to be devised upon sound principles, and to answer their purpose. The recent improvements consist in silver-plated surfaces, instead of using leaf silver for this purpose; and the use of metal, instead of glass, for the silvering, is another improvement. Some of the reflectors exhibited are also contrived to obviate the dazzling effect of refracted light, by filling the reflecting surface with numberless concavities and convexities, so as to soften the light, and diffuse it at different angles. In the gas reflectors, the former mode of using copper plated surfaces is done away with, and a combination of crystal with silver-plated copper is used in such a manner as to exclude air from the silvered surface, and at the same time permit the glass to expand when heated. Many thousands of these useful articles have been sold within the last three or four years, and a great addition to comfort obtained in numberless instances. I hope, however, we shall never see any new buildings designed with so little regard to the exigences of situation as to render any such assistance necessary. A reference to the elevation of some houses erected at Maidstone, in Messrs. Ashpitel and Whichcord's large drawing; or to Mr. Waterhouse's building at Manchester (63), will show that it is perfectly easy to do away with all obstructions to light. The merits of Mr. Tyerman's hoop-band are so evident, and the additional cost is so nominal, that I should think no one would ever use any of the old bond, which, as frequently applied, might as well be omitted altogether.

Before we examine the artistic productions complete in themselves, there is a class of contributions which comes half-way between these and those last alluded to,—things complete as far as they can be, independent of their final situation.

Thus Mr. Leake contributes some specimens of leather hangings, in use among the ancient Egyptians—for I believe there is a specimen of embossed leather of 900 B.C. in the British Museum, and which was very prevalent in the two last centuries, though not then treated exactly as now. The mode then adopted was to prepare the leather by hand, and without machinery, pressing into moulds, so as to give the required form, with small wooden tools, which, when dry, was coated over with silver leaf, and then lacquered to produce a gold colour. Now, however, science steps in, and, with the assistance of steam to soften the leather, metal moulds to receive it, and hydraulic pressure, we get not only the patterns suitable for hanging, but also cornices, brackets, and other wooden and stone forms, into which the leather is forced,—a species of application which our forefathers were saved, for want of knowing better. Messrs. Jackson's most excellent productions in papier-maché are somewhat akin to the leather manufactures, and are of great perfection as to workmanship. I understand the large figure is similar to some that have been put up in St. George's Hall, at Liverpool; and it may perhaps be asked, how is the doctrine of truthfulness and honesty, so much insisted on, to be applied to productions so meritorious in themselves as these? are such in all cases to be rejected? By no means. And —speaking altogether in ignorance as to how or in what part of St. George's Hall the figure exhibited is used—if I say that, in such a building, to my mind, the introduction of such a figure in such a material is inapplicable and dishonest,—since the character of the building would lead a spectator to believe that stone or marble only would be used, and would be suitable, perhaps,—I illustrate the distinction as clearly as I can,—while at the same time there are thousands of situations where an imitation of statuary, in a subordinate composition, would be perfectly legitimate, as the reality of the imitation would never be suspected, could never be questioned, and would please and satisfy the eye by reminding of the original type. And something of this would apply to Mr. Kershaw's imitations of woods and marbles, which are so very beautiful, that one is led to suspect that they would cost as much to produce as a veneer of the real material.

To pass on to the excellent productions in glass mosaic, by Mr. Stevens. We have heard already from Mr. Fergusson, how the Assyrians used a mosaic composed of clay cones, three or four inches long, coloured, and let into a plaster ground, — which ground played an important part in the effect produced; — and we have heard from Mr. Scharf a description of the Roman mosaic, where the whole pattern is made of very small pieces, in opposition to the Florentine method, in which were used pieces as large as could be got with convenience. These mosaics were formed of gems, marbles, or coloured stones, inlaid in a slab of marble; but there is also a Roman mosaic of glass, in which, a flat rigid surface being prepared and overlaid with plaster, the pattern is drawn upon the plaster, and the small spaces being scooped out, one by one, are filled in with cement, and the tesseræ of glass, or porcelain, are pressed in. Mr. Stevens's process is somewhat analogous; but he uses glass altogether, and as geometric patterns only are used, there is much less expense. Mr. Stevens, however, although he has not gone beyond this method hitherto, is quite willing to work out any more complicated designs as are found in ancient specimens; and it is, perhaps, surprising that so excellent, lasting, and tasteful a method of decoration is not applied more generally. At the church of All Saints, Notting-hill, erected under the able superintendence of Mr. W. White, the mosaic is

* We would add a strong expression of our own good opinion of Mr Jennings's improved Drain-pipes. The arrangement is excellent.

let into the Bath stone spandrils of the clerestory windows, and is suggestive of many similar applications in our church interiors. The productions of the Ladies' Guild are also a species of mosaic, but beneath, instead of on the surface, the paper is inlaid in patterns, though sometimes painted.

Messrs. Hart's many contributions are worthy of attention; and as an example of design applied to common things, I may mention the coal-plate, by their foreman, Mr. Ash. Only let it be once acknowledged that nothing is too insignificant to be treated with some feeling of art, and we shall soon have a universal improvement in things more important.

Messrs. McLauchlan and Mr. Simpson have evidently studied to unite excellence of design founded upon architectural models, with excellence of workmanship. Messrs. McLauchlan's looking-glass details, and the carved panel, are of early Gothic character; and they have adopted a method of ornamenting the gilt *plain* surfaces, with burnished patterns, which is in itself a far better plan than the more common method of burnishing members of mouldings only, or the prominences of ornamental work, by which the general design is often much confused. This mode of ornamentation by two shades of brilliancy, at the same time making the outline pattern with an engraved line, is undoubtedly capable of great development and variety.

Mr. Simpson has also carefully followed the models within his reach, for the purpose of producing paperhangings to harmonize in design with mediæval architecture. There is in all a proper flatness of treatment, and the colours are quiet and mostly well contrasted, and the introduction of crests and initials is undoubtedly appropriate. These manufacturers are evidently in earnest, and deserve to succeed.

The tiles by Mr. Brown, of Surbiton-hill, and the porcelain baths by Mr. Finch, in one piece, are both good, and we are indebted to the Vieille Montagne Zinc Company for an improvement in the mode of applying zinc to roofing purposes—by which the usual boarding is omitted: the rafters form the rolls, and the metal receives, through the short distance between the rolls, the additional strength derived from corrugation.

Mr. Winston gave us an explanation of the method of painting and enamelling upon glass, but we have in Messrs. Bowden's contributions an article of much greater brilliancy, and in which the effect is got by cutting, somewhat in the manner of the Bohemian glass, the patterns being ground out with a stone wheel, after which a wooden one is applied to produce the polish. It is a peculiarity in the manufacture that the entire design is almost altogether left to the workman: he has no drawing, nothing but a dab or two of whitening on the glass; and if we were to ask him to sketch or draw his pattern, he would be wholly unable to do it, in spite of the precision with which he draws and works with his wheel.

Under our present head we may note the examples of carving and modelling: those by Mr. Taylor, being models of the carved details of a bookcase, are good, and lead us to believe that the work from which they are taken is worthy of its designer, Mr. J. K. Colling, who has for so many years devoted his study and attention to foliages, and so successfully. There is also much beauty in Mr. Phyggen's model, called the "Heavenly Chorus." Second, however, to nothing in these rooms is Messrs. Collmann and Davis's carved oak mantelpiece, designed by Mr. Collmann. We know that in many cases recently, foreign carvers and artists have been employed; and while there is now a very fair amount of talent available among the English stone carvers, we have here a production in *wood* carving entirely by English workmen: the work as we see it is precisely as it has been left by the chisel, and has not been touched with sandpaper: the ornaments are none of them affixed, but the whole is cut out of the solid oak. And while the workmanship of Messrs. Collmann and Davis is worthy of all praise, they deserve further credit for having given us a specimen which is not of a Gothic character, as an evidence that there is no want of superior workmen ready to devote their talents to a class of work which has lately become very unusual.

M. Remon's and Messrs. Galli and Cotti's contributions come under the head of the works of art complete in themselves. It is gratifying to see an exhibitor take such pains to exemplify his talent as M. Remon has done; and as the object of this inquiry is not criticism, there are but few remarks to make of an explanatory character.

The centre panels are in the Renaissance style, and an oak ground has been chosen as being suitable, and because cabinet furniture was during that period mostly of oak and walnut. The panels to the left are in the manner of the period of Louis XV. in the style of Watteau. Those to the right are in the style of Louis XVI. and Marie Antoinette, corresponding with the style of the Adams in this country, but with much less stiffness and tenuity; the distinctions so nicely kept up, the way in which the extravagance and ugliness of these styles of art are kept subdued and in good taste, show that M. Remon is as much a master of his subject theoretically as he shows himself to be practically. As a further exemplification of these styles, reference should be made to the exquisite drawing by M. Prignot, who gives us the interiors of two rooms, carried out entirely, and both of which are designed in the same tasteful, judicious, and careful manner, and above all with a view to harmony, between the furniture and the architectural decorations themselves—a thing now, alas! hardly ever thought of.

Messrs. Galli and Cotti will, I hope, have succeeded in calling such attention to their fresco painting, as will lead to a trial of it being made; for, as the material is non-absorbent, it would appear to be especially applicable to a city like this, where so much coal is burnt, and where all porous materials become of one black hue, for it is *externally* that Messrs. Galli and Cotti wish their workmanship applied, and stipulate only that it should be done between the months of April and August, or even in September, if the painting face the south. Although the colours in use are few, comparatively, great scope is afforded an artist conversant with the material; and with fair usage the work, if properly done, is everlasting, and requires only an occasional washing with plain water to restore it to its pristine beauty.

Enough has, however, I hope, been said to show you how extensive is the interest that must attach to the art of architecture, and to all the multitude of manufactures, applications, sciences, and inventions connected with it. There is no view of the question you can take up, no direction in which you can turn, without being met with countless subjects of inquiry—numberless sources of enjoyment: take it in its highest and most abstract sense as a high art, or in its most practical feature of building constructions, as your particular turn of mind may lead, and you will find a never-failing food for study, never-ending opportunities for mental exercise, perpetual additions to attract your attention.

At the close of Mr. Edmeston's interesting observations, which included an appeal to the ladies to help them in earnest next year, some notes on the articles exhibited, forwarded by the Council of the Institute of Architects, at the request of the Committee of the Architectural Exhibition, were read; and then, with a cordial vote of thanks to the committee and to the various lecturers, the proceedings terminated.

The notices sent by the Council were brief expressions of opinion. We extract some passages likely to be useful to exhibitors by giving assurance to the public:—

4. Wilshere's Substitute for Paint.—The stain is agreeable, well toned, and allows the natural grain of the wood to be seen through it: there may be a doubt whether the varnish can really be depended on as a protection against the weather.

5. The Indurated *Natural* Stone (of Tunbridge Wells Co.).—Must be valuable where hard stone cannot be readily procured; and this article is said to be moderate in cost. The probable action of fire on the *artificial* stone should be considered, even granting that the atmosphere may be resisted as described in the catalogue. The cast work is not considered altogether satisfactory.

6. The Glazed Bricks and Coloured Tiles of the Poole Company show a meritorious advance in the manufacture; but they are expensive.

13. Serpentine Marble.—The Lizard Company exhibit well-prepared specimens. It is to be hoped that the same care in stopping and polishing is bestowed on larger articles made to order.

14. Ornamental Cut-Glass (Bowden's).—Appears good for domestic purposes, and reasonable in cost.

Green Slate from Carnarvon (not numbered).—Has good colour; is apparently of good quality; giving a metallic ring on being struck, and admitting of being cleft in moderately thick slabs: it is desirable to know the results of experience as to its durability.

20. Papier-Maché and Carton Pierre (Messrs. Jackson's),—Is a beautiful material; successfully applied to carry out an artistic design.

28. Models of Bells (by W. L. Baker),—Exhibit a clever method of hanging them; but it is desirable to know how the cast-iron cage, &c. may stand the test of a lengthened trial on a large scale.

29. Hollow Bricks, &c. and Brickwork (by B. Looker),—Are apparently good. The ventilation proposed to be effected in the humble class of dwellings is very desirable.

35. Magnus's Enamelled Slate Chimney-piece and Stove.—Apart from the clever imitation of porphyry, advantages are perceived in the combination of the two methods of warming rooms, &c. in this article.

41. Paper-haugings (Simpson).—Some are very good, apparently copied from old examples; while in others, the apparent imitation of encaustic tiles is to be regretted.

42. Bunnett's Interlocking Shutters, &c.—are ingenious contrivances, but require care in their application.

44. Italian Roof-tiles (by Brown).—The manufacture is good; but the affectation of age attempted to be given by the green colour must be objected to.

45. Botten's Patent Regulator and Water-closets.—On the whole, good; are useful where it is required to regulate strictly the supply of water to the pan; but inconvenient where it may be desired to discharge more water through it. The other articles are ingenious.

47. Indurated Stone (Barrett's patent).—The question arises whether dependance can be placed on the permanent condition of stone so treated.—[It certainly deserves a trial].

48. Artificial Stone (from Seeley's).—The experience of thirty odd years proves the durability of this article.

50. Self-acting Lever Tap (Davis's)—appears ingenious, though somewhat complicated.

54. Baths and Fittings (Finch)—3, 4, 5, 6, 7 (tiles)—are well known and useful. The other items under this number appear good.

55. Gas and Day-light Reflectors.—Are very useful where there is a deficiency of natural light. The latter are very serviceable. Some method of rendering them in unison with the architecture of the building in which they are introduced may be considered desirable.

In designing furniture, whether mediæval or modern, convenience and applicability to the purpose should not be lost sight of: sharp unnecessary angles and projections should be avoided.

Fresco paintings on walls are becoming more appreciated, where their durability can be depended on, and their execution may not occasion greater comparative outlay than other methods of decoration. Should the specimens shown combine these advantages, a very desirable means of improving the appearance of our rooms will be placed at the disposal of architects.

The iron and brass work in the third room does not display much novelty: the brass appears to be better designed than the iron. It may be remarked, that sharp unnecessary edges should be avoided in all articles required to be handled in constant use. Exception must be

taken to the design and painting of the porcelain finger-plates.

In conclusion, the Council of the Institute of British Architects must not omit to express their opinion as to the advantage to architects, manufacturers, and the public generally, which is likely to arise from periodical exhibitions, such as the present, of materials, manufactures, and inventions connected with architecture, by tending to keep up a fair spirit of emulation among the producers, and conducing to the development of structural science in combination with artistic design.

THE NEW PALACE AT WESTMINSTER. SIR CHARLES BARRY'S CHARGES.

Copies of Treasury minute, dated the 6th February, 1854, and 29th January, 1856, have been issued, with regard to the claims of Sir Charles Barry for services connected with the building of the New Palace at Westminster. This sets forth, that on the 26th May last the following offer was made to Mr. White, as acting for Sir C. Barry, with a view finally to settle all questions as to commission, measurement, and all other claims up to October 2nd, 1853, to which date the closed accounts extended, Sir C. Barry, it should be said, having put in various claims for extra payment over and above his commission:—

"1. That a commission of three per cent. should be allowed on the entire outlay of 1,506,845*l.* up to the 2nd October, 1853.

2. That a remuneration for measurement upon the whole of the works included in that outlay should be paid at the rate of one per cent.

3. That those commissions should cover all demands of every kind whatsoever for the past, the services for warming, lighting, and ventilating alone excepted, which should be dealt with separately, and upon their own merits.

4. That the remuneration of Sir Charles Barry for the future should be fixed at—

Three per cent. commission on the outlay as architect, and one per cent. for measurement upon all works to which measurement applies; and that no furniture, &c. should in future be furnished by Sir C. Barry, except by the special order of the Treasury.

After numerous further interviews and discussions with Mr. White, that gentleman, on the part of Sir Charles Barry, declined the terms of settlement thus offered, and pressed again the claims for the extra services performed.

My Lords having again referred Sir C. Barry's claims for a report to the Board of Works, and having very carefully reviewed the whole case, continue to be of opinion that the terms herein stated are not only fair, but liberal; that they include all remuneration to which Sir C. Barry is justly entitled for the services he has performed; and that they could not extend the same consistently with their duty to the public.

Considering, moreover, that the matter has gone on for nearly twenty years without any distinct understanding being arrived at, notwithstanding the efforts of every successive Board of Treasury to do so, my lords are of opinion that it is inconsistent with the public interests that it should be any longer delayed; and they therefore, as far as they are concerned, must record these terms as their final decision upon the questions at issue. They are pleased, consequently, to direct that no further payment be made on account, until a final settlement of the past, and an agreement as to the future, are concluded."

Sir Charles Barry has since published a statement, showing that when he first entered upon his duties in 1837, it was with the understanding that the usual commission of 5 per cent. would be the amount of his remuneration; that after eighteen months he was informed of an order from the Treasury that, for certain reasons assigned, his remuneration was to be limited to a fixed sum of 25,000*l.* being nearly 10,000*l.* short of his stipulated commission, and that the same principle of limitation was to be applied to all public buildings from that time. Against this decision Sir Charles entered a protest, which has never been answered or contested; nevertheless, by the advice of his friends, he acquiesced in the decision, upon condition that it should be reconsidered on the completion of a considerable portion of the work, when he expressed his belief that the injustice of such a reduction from his legitimate claims would be manifest.

That owing to a great extension of the building, and numerous changes, sanctioned and commended by Parliamentary committees, increase in the value of materials, and other causes, the expenditure has been greatly increased, and the arrangement in question altogether nullified.

The Government has in effect admitted the nullity of that arrangement by making unconditional payments to the architect from time to time, of about 20,000*l.* beyond the original fixed sum. After much negociation with many successive Governments for nearly twenty years, the present one has made an offer of 4 per cent. upon outlay, and a special recompense for the trouble and difficulties encountered by the architect in respect of the warming, ventilating, and lighting arrangements of the building. To avoid further contention, but not until after having in vain urged repeatedly a reference to arbitration as the only fair and proper mode of deciding upon the various questions at issue, Sir Charles has been induced, at a very considerable sacrifice, to consent to the principle of remuneration now proposed, upon condition that certain extra services, not pertaining to his duties as architect of the new palace, and to which the proposed commission can have no reference, should be recognized and recompensed, either by a fixed sum, or at such an amount as might be determined by arbitration, to which proposition, however, the Government has not acceded.

With respect to the appointment of the late Mr. Pugin, and to a claim made by their Lordships for a set-off upon the architect's commission on account of moneys paid to him, Sir Charles points out that Mr. Pugin was not employed upon any duties that devolved upon the architect of the new palace, inasmuch as all designs for that building had emanated from Sir Charles himself; but only as the superintendent of the wood-carving department, in carrying out the architect's designs, to which office he was appointed by the Government at a salary.

As to the mention made of the furniture in the minute, which, we are able ourselves to say, has led extensively to the very disagreeable inference that the architect had *supplied* it, in the way of trade, Sir Charles states that he had only been employed to make the designs for it, see to its being properly executed in accordance with the contract, and check the accounts.

Sir Charles conceives that he has a right to complain that the Lords Commissioners of her Majesty's Treasury have constituted themselves the judges in their own case; that they have formed their decision partly upon *ex parte* statements, to which he is an entire stranger; that, while they are now paying at the least 5 per cent. to all architects and engineers of independent practice for works of the plainest and most simple, although most expensive, character, they make the New Palace at Westminster, which undoubtedly is the most elaborate and complicated edifice in modern times in this country, the sole exception, and propose not only to pay to its architect nearly 20,000*l.* less than his legitimate claims, but to deprive him of all remuneration whatever for many extra services not pertaining to his duties as the architect of the New Palace, and to which their offer of commission can have no reference; and, lastly, that their lordships have not acceded to a reference of the several questions, at issue, although Sir Charles has repeatedly expressed his perfect readiness to abide by the verdict of such a tribunal.

In the course of the correspondence which has been going on, Sir Charles, in reply to a statement from the Treasury that "my Lords" were acting on precedent, gave the following list of public buildings, upon the cost of which their respective architects had received 5 per cent. *since* the year 1832:—The British Museum, the General Post Office, the State Paper Office, Whitehall Chapel, Westminster Hall, the National Gallery, the new front of Buckingham Palace, the Museum of Economic Geology, the new Money Order Office (St. Martin's-le-Grand), the Royal Pavilion at Brighton, St. Katherine's Hospital (Regent's-park), the Lodges and Gateways in the Parks, Kensington Palace, Temporary Houses of Parliament, Chapel Royal, St. James's, the Courts of Law, &c. &c.*

In some of the above instances the architects were also relieved of the measuring and making up of the accounts, &c. It appears, therefore, that payment at the rate of 5 per cent. to the architects of all public buildings has invariably been the rule of the Board of Works since the year 1832: prior to that time the same rule prevailed except in respect of those buildings which were carried into effect under the direction of those architects who were for a time attached to the Board, who received 3 per cent. for certain understood reasons.

With reference to the additions and alterations made under the direction of Mr. Nash, at Buckingham Palace, and the subsequent alterations under Mr. Blore, at the same building, the remuneration received by these two gentlemen was not only at the rate of 5 per cent. but they were also relieved from all labour, cost, and responsibility as to measuring, &c.

As to the works at Windsor Castle, Sir Jeffery Wyattville was not only paid at the rate of 5 per cent. but he had also the same relief afforded him as to measuring, &c. which circumstance, and not the payment to him of 5 per cent. as supposed by their lordships, was, as appears by a Treasury minute of the 6th October, 1826, considered to be an equivalent for his journeys, and some other extras usually charged by architects. Notwithstanding, however, this arrangement in lieu of a charge for journeys, Sir Jeffery had also the advantage of having a residence assigned to him in the Castle, free of charge, during the whole of the time he was employed upon the works of that building. In short, the payments made to the architects of the two above-mentioned works, together with the immunities and advantages which they enjoyed, constituted a remuneration fully equal to 7 per cent.

As to his own case, Sir Charles states that he has not only performed all the professional duties which Sir Jeffery Wyatville and Mr. Nash performed in respect of Windsor Castle and Buckingham Palace, but in addition has been called upon to take upon himself the labour and responsibility of making contracts, forming elaborate schedules of prices, measuring, and making up accounts amounting to nearly 1,500,000*l.*, and of adjusting disputed claims to a considerable extent, from which onerous duties they were altogether exempt; and that he has had at least as great, if not much greater, difficulties than they had to contend with in carrying into effect the works at the new Palace at Westminster, owing to the necessity of forming an artificial foundation in the river; the limited clearances from time to time of the site; the necessity of keeping up old buildings—often a work of much difficulty and danger—and constantly adding temporary accommodation, so that the sittings of Parliament might not be interrupted; the interference with the progress of the works by parliamentary committees and other authorities, involving numerous alterations and delays, and the impossibility, in consequence, of spending, upon an average, more than 90,000*l.* per annum, by which the works have now been in hand more than eleven years beyond the time originally assumed for the completion.

The tone of the Treasury "Minute" throughout seems to us harsh and unfair. We give the following letter on the subject from amongst those which have reached us from correspondents:—

I am sure the profession generally will be much pleased to see the firm manner in which Sir Charles Barry has asserted his claims to proper remuneration for his laborious services connected with the new Houses of Parliament. It is monstrous to suppose that a man of his great ability is to be denied the proper reward for a work of such extraordinary character. My object, however, is to confirm Sir Charles's remarks in reference to the late Mr. Welby Pugin. That gentleman, in a conversation with me not long before his death, expressed much

* To this list may be added Board of Trade and Treasury Buildings, Trafalgar-square, Piccadilly improvements—all carried out under the professional guidance of Sir C. Barry.

annoyance at the prevalent reports, which attributed the best portions of the design of the New Palace at Westminster to his skill. I had frequently heard these remarks myself from people in high position, and upon mentioning it to Pugin, he most emphatically denied the truth of the rumours, and desired me to make the facts known wherever I could, adding some very complimentary remarks upon Sir Charles Barry as an architect, and claiming for him that facility and readiness of design which he is known to possess. My intimacy with Mr. Pugin commenced while a pupil with his father, and I never knew a person more ready to give praise where he thought it due, while at the same time he never ceased to denounce those who pretended to skill which did not belong to them.

BENJ. FERREY.

Any evidence as to Mr. Pugin's position should be quite unnecessary after the letter addressed to us by that gentleman some years ago, which was printed in our columns.

ON THE APPLICATION OF PAINTED GLASS IN ARCHITECTURE.*

A FEW years ago I should not have ventured, in advocating a new system of glass painting, to have recommended any but a very general conformity with ancient precedents, from the want of a material similar to ancient glass. But this desideratum has now been obtained, entirely by the skill and perseverance of some of my scientific friends, the successful issue of whose exertions is, perhaps, best acknowledged by the attempts at imitation on the part of those who at first were loudest in decrying and ridiculing their discoveries. The similarity of this new material to the old is, however, so close, that we may gather hints for its employment from the works of the ancient glass painters.

An extended acquaintance with ancient painted windows will convince us that the nature and execution of the design varied with the nature of the material employed.

In the twelfth and thirteenth centuries, the mode of painting was of a kind admirably calculated to tell on glass so powerful in its local colour as the material then used. The form of the features and draperies was strongly marked with opaque outlines, which, in fact, amounted to, and served as, the deeper shadows; and these were united and softened with a shadow in half tint, roughly applied as a wash. The pictures were also composed on a principle well suited to a stiff mosaic. The figures, placed in a single line, were separated from each other, and insulated by a stiff-coloured ground, by which means distinctness was attained without the aid of atmospheric effect. A somewhat similar mode of treatment was practised in the fourteenth century, but not so satisfactorily;—a more complicated kind of composition being usually adopted, destructive of the former means of producing distinctness, in lieu of which no new method was introduced.

The fifteenth century is distinguished by a far more delicate mode of execution. The former thick outlines were reduced to hairstrokes; and carefully finished shadows, varying in depth, succeeded the monotonous wash of shadow in half tint. The groups of figures, too, were arranged, as we see them in ordinary paintings, —some standing before the others. And if the artist did not succeed in separating the figures from each other, and making his composition distinct, it was but from want of skill, not from intention. In the sixteenth century, this object was fully attained; only, however, by a more vigorous and skilful application of the means which the artists of the fifteenth century possessed.

Glass paintings may, indeed, be divided into two classes. The first where the mode of representation is conducted on an artistically flat principle,—as in a bas relief. The other, where the picture is composed on the principle of representing depth. It would be too much to say that either of these different principles has always been consistently carried out in ancient glass paintings. The first, or flat principle, is best indicated in the works of the twelfth and thirteenth centuries, in which there is little attempt to represent objects situated in more than a single plane, having a thickness not greater than that of the human figure. This principle, as I have said, was violated in the fourteenth century; the whole of which century, as well as the whole of the fifteenth, was spent in the passage from the flat to the rotund style of representation, the change not being complete till the second quarter of the sixteenth century.

We need not trouble ourselves, therefore, much with any intermediate types, but confine our attention to the remains of painted glass belonging to the twelfth and thirteenth and to the sixteenth centuries.

Of the twelfth or thirteenth century, the best subject for examination, is the Medallion window,—so called from its design, consisting of a series of panels or medallions, containing groups of figures, and embedded in an ornamental ground. I am not one of those accustomed to go into a fit of enthusiasm at the sight of one of these windows, which, I suspect, owe their popularity, principally, to the unquestionable beauty of their individual tints; for they are often confused in composition, and occasionally exhibit an undue predominance of some particular colour. I look upon them not as models for imitation, but only as affording the means of instruction, and hints for the achievement of something better suited to the requirements of the higher artistic knowledge and more fastidious taste of the age in other matters.

On examination, we find, as I have already stated, the figures composing the group for the most part separated from each other, arranged in a single line, and cut out by the coloured ground of the panel, which usually is of deeper hue than the flesh or draperies, and is left unornamented, doubtless to avoid distracting the attention from the figures. The figures are thus rendered distinct and effective,—at a distance proportioned to their size,—without the aid of a receding background, and with but little assistance from light and shade. The frame or border of the panel, the ornament which fills the interstices between the panels, and composes the border which encircles the whole design, are all superficial in design. On looking at Roman work of the time of the Empire, and at the carved ivories which from thence form a continuous chain, illustrating the transition from the Pagan to the Christian sentiment in art, we perceive at once the influence under which the glass painters of the twelfth or thirteenth centuries worked, and the classic origin of their ideas of art. And when we consider that all early Gothic art is derived more immediately from the Greek than the Roman, we need not be surprised at the strong resemblance which exists between the draperies and ornaments of the glass paintings of the twelfth and thirteenth centuries, and those of the archaic, rather than the later Greek sculpture, the remains of which, lying chiefly in Asia Minor, might perhaps have been better known to the artists of Byzantium.

A good deal of confusion and trifling criticism might be avoided, if, in all our applications of painted glass to Gothic architecture, we should propose to ourselves,—not the following of any particular style, which can hardly fail to involve a following of certain defects, that had better be avoided,—but the attainment of real harmony between the new work and the old architecture.

If this be our aim, — unless, indeed, we are prepared to admit that the very defectiveness of old glass paintings is an element of such harmony, in which case the sooner we get rid of Gothic architecture the better,—we shall find the present mode of estimating a new window, —in proportion to its chance of being mistaken for an old one,—only a mischievous guide, and shall learn, on the contrary, to value its inevitable nineteenth-century character, as one of its principal excellences.

With a view to ascertain how far we might succeed in attaining harmony between late Norman architecture and painted glass, by an attempt to work up to the high standard which influenced the artists of the twelfth and thirteenth centuries, instead of working down to the level which they themselves attained, I caused the experiment to be tried a few years ago, of introducing into some windows in the round part of the Temple Church, figures after Greek designs. The experiment was, no doubt made cautiously, and even timidly; but its success has been such, in the judgment of those best qualified to form an opinion, that I have now no hesitation whatever in recommending, in nineteenth-century glass work designed for a twelfth or thirteenth century building, the introduction as much as possible of the Greek element in the form of the ornament, as well as in that of the draperies; taking care, of course, to express in the figures true Christian sentiment, as we find that expressed by the greatest of all Christian or any other painters. I laugh at the imputation of "eclecticism," which such a recommendation is likely enough to provoke from persons ignorant of the real meaning of the word. For if this is eclecticism, it must follow that Raffaelle himself was the most odious of eclectics. That the recommendation, which is now of somewhat old standing, is not an impracticable one, has been lately proved to me by the sight of some cartoons, done by an artist, for some windows in one of the transepts of Lincoln Cathedral.

I really believe that the nearer our glass paintings approach Greek excellence, the better they will be found to harmonise with the ancient architecture of the twelfth and thirteenth centuries. I use the term "ancient" architecture advisedly, because I doubt if they would be found to harmonise so completely with modern Gothic; in which I wholly miss that inexpressible vigour, and real feeling for high art, which are the natural result of honestly working up to a high standard, instead of idly descending to a low model; and which most interesting features, I am bound in common fairness to say, I recognise more or less fully in all modern edifices erected in the classic styles.

In like manner we might advantageously borrow ideas from the antique in the arrangement of the groups, attending particularly to Mr. Cockerell's hint, in his admirable lectures on sculpture,—about affecting diagonal and avoiding perpendicular lines in the figures. The painting of the figures should of course be executed in the manner which the experience of the old glass painters has shown to be best suited to a dense, strongly-coloured material, and they should be shaded so as to appear rotund. For, in speaking of a flat style, I always mean an artistically flat one,—a style, in short, induced by the necessity of employing stiff colour, in which the skill of the artist is evinced by conforming to unavoidable conditions, and yet producing a good and effective picture,—not a style in which, from a want of artistic knowledge, every figure looks as flat as if it had been ironed out against a wall.

In the form and general arrangements of the medallions, and of the entire window, ideas might be borrowed from antique mosaics and other work. Even Italian ceilings might show how the ground colours of the panels could be more varied than is ordinarily the case in mediæval example; care of course being taken that a change in the ground colour should be followed by a corresponding change in the colouring of the group, which should almost always be either decidedly lighter or decidedly darker than the ground on which it is placed.

Many of the pattern windows of the twelfth and thirteenth centuries, which, like all other mediæval pattern windows, are principally composed of white glass, are truly admirable in design, and could hardly be improved on. But there is yet a wide field for the invention of new patterns borrowed from the antique, and which, if carried out in a proper spirit, would harmonise with ancient architecture as well, and with the new picture windows probably better than the older patterns.

Of course, all these remarks are made subject to the employment of the new material I have already alluded to; a recommendation which, as I have no sort of interest in the matter, I may be allowed to make with a pure conscience.

I shall offer but few observations upon the nature of the glass paintings which seem most fit for the windows of a building of the fourteenth century. It is true that deep-toned glass is a

* See p. 71, *ante*.

concomitant of decorated architecture; but I question much if a mass of such deep colouring as this glass might present is best adapted to a window having mullions and tracery. A mass of deep dense colour always appears to me to confuse the more minute tracery. On the other hand, a window with mullions and tracery is apt to lose its breadth of effect, unless some general hue or design pervades, and so unites together, the whole of the lights. For these reasons, I think that, upon the whole, the rich sea-green white pattern windows of the period, with or without a row of coloured panels containing groups of figures running across the lower lights, produce the most satisfactory effect. If so, they afford an excellent guide. The patterns themselves are generally most beautiful, and it would not be easy to improve upon them. And the remarks I have already made upon the general treatment of medallion pictures, to be executed in a dense deeply-coloured material, would be equally applicable to the panels of those designs. I need hardly trouble myself to condemn the employment, in the fourteenth century, often to the oppression of the poor figures beneath, of canopy work, which, like an architect's geometrical drawing, does not distinctly express the various plans and projections of the design, but is found barely to indicate them, even after a long and laborious search. It would be hard to say, after so many existing examples, that the use of figures and canopies in painted windows, is not in strict accordance with Gothic principles. But the only principle with which we are concerned, is that of good taste; and the use of such designs, being in their nature incapable of adequate representation in a dense deeply coloured material like that of the fourteenth century, is only one of the many proofs of the decline of art which that century affords. The Gothic architecture of the fifteenth and sixteenth centuries is so much alike, that it is not surprising to find the sixteenth-century glass paintings that have happened to be placed in buildings of the fifteenth century agree so completely with the architecture. Indeed, the glass paintings of both periods are alike in principle; the development of this principle, in the sixteenth century, constituting the chief difference between them. The old painted glass of the fifteenth century is pleasing, from its pearly lustre, the result chiefly of delicate shading and high finish; but the glass of the sixteenth century is as pearly, and in all other respects superior; for which reason we may devote our attention to it.

The works of the second quarter of the sixteenth century, in which I include both Gothic and Cinque-cento examples,—for the style of ornament is but an accident, having no bearing on the general subject,—if considered as forming collectively a class of glass paintings in which pictorial effect is aimed at, rather than a rich collection of brilliant tints, are so nearly perfect in all their varieties, from the simple figure with its background of tapestry, to the composition in which several planes of vision are represented, as in the fresco of the school of Athens, and in some of the cartoons; that it seems almost superfluous to advocate their study as models. A great many of these designs exist; and a skilful artist will easily perceive, and as easily avoid their defects. The finest are undoubtedly those in which, as in the cartoons, and other works intended to be executed in a material not favourable to a representation of depth, the figures occupy the immediate foreground, and constitute the most important feature of the picture; the background being a mere accessory, composed,—unless when the nature of the design or other circumstances require that it should be occupied with architectural forms,—of a light neutral blue glass, which, whether left all clear as sky, or partially covered with a landscape, by its sober colouring, relieves and throws forward the more positive colouring of the group. It is important to observe that these, as well as the earlier glass paintings, are composed on the principle of a broad sunshine effect, by which distinctness is attained without having recourse to any very extended mass of shade. Hence the brilliancy of these works, as compared with later examples, in which the opposite principle has been adopted of shading up to a point of light, and which in many cases leaves more than one-half of the picture,—not in transparent shade, as in oil painting, but,—on account of the different conditions of a glass painting,—covered with a harsh, dry, heavy coat of dull colour. The expedients adopted to obtain a receding effect, when objects at different distances are represented in the background, are as simple as, and very analogous to, those used in the school of Athens.

Having thus completed our remarks on the mediæval styles, only a very few observations need be made on the nature of the glass paintings most likely to harmonise with buildings in the Classic styles.

With regard to Palladian buildings, we have the Cinque-cento style ready made to our hands, the various designs of which more or less rich in colour, light or deep in tint, flat or receding in their design, would supply ample hints for meeting any exigency of local position or character of the surrounding architecture.

With regard to Greek buildings, the ground has hitherto remained untrodden, and we are left without any practical guide. No one, I apprehend, would think of adopting the Byzantine expedient of a pierced stone framework, even if such could be proved to be of classic origin. If we infer the proper style of glass paintings from an examination of antique works in fresco or mosaic, we shall be inclined to adopt a style light, gay, and lively in its colouring, like the Cinque-cento, and possessing little of the deep, solemn character of the glass paintings of the twelfth century, the material of which, as already stated, is almost identical with the glass of the ancient Greeks. The question is,—supposing that the Greeks had been acquainted with the manufacture of window glass, what sort of colouring would they have been most likely to have employed in their windows? If we think that they would have given the preference to cool, richly-coloured glass, the supposition may be reconciled with the different aspect of the ancient mosaics, by considering that these works were composed of materials most of which are naturally of a light colour,—and that forming opaque surfaces, deriving their effect from reflected light, they were not so suited to display deep or rich colour as an object that transmits light. The subject, it must be admitted, is one of considerable difficulty. If I *must* offer an opinion on it, I should incline to think that richly-coloured glass, representing pictures in mosaic, such as those which have been already referred to, would prove most in harmony with the architecture, even though such treatment might have the effect of diminishing the apparent size of the building. Such is an outline of my views on this interesting subject,—views which, in whatever manner they may appear to have been stated, I can answer for it, have not been conceived in a dogmatic spirit. The shortness of time allowed has compelled me to abstain from many kindred topics, and barely to allude to others, so that I have presented little else than the epitome of an argument. I can only hope that I have expressed it intelligibly. In conclusion, I will offer a few remarks on a subject, the consideration of which, as it is of very general application, I have postponed to the last. I allude to the vexed question, whether a pictorial design in glass should ever have a receding background, or transgress the limits of a single light in a window?

It cannot be denied that there is an abundance of ancient glass painting, having, or intended to have, receding backgrounds; whilst of designs extending beyond the limits of a single light, there is a series, commencing with the introduction of the mullioned window. Those, therefore, who argue in denial of either proposition, must make out that it impugns some principle of taste; for it is idle to say that it is opposed to any Gothic principle.

It may readily be conceded that a receding background is incompatible with the use of a dense, richly coloured material, like that of the twelfth, thirteenth, and fourteenth centuries. But, unless it can be shown that no glass paintings, whatever be the principle of their composition, can adequately represent depth,—and before we admit this, we must deny the evidence of our senses,—it seems to savour of ultra-mediævalism to banish them from buildings into which they were admitted by those who actually lived in the Middle Ages; and so, still further to restrict the range of subjects, already sufficiently circumscribed by the conditions of glass painting.

We may, I think, very fairly, and safely, continue to prove to the world that we, at all events, do not profess to be wiser than our ancestors, until such time as our modern mediævalists have either produced some new variety of subjects, in all respects equal to the class they reject; or else, retaining such class, have hit upon some new mode of treating it, which shall be as satisfactory as that adopted by the artists of the sixteenth century.

And with regard to the question of carrying a subject into more than one light, there are many persons, whose reputation for good taste would perhaps stand a comparison with that of our mediævalists, who are unable to perceive the ill effect which they allege is produced by even a figure being cut through by a mullion. As far as my own experience goes, I have always found that, if a sufficient quantity of the object separated remain on each side of the mullion, the eye passes across the mullion without being sensible of any interruption of the design. It is true that a confused effect will be produced if a sufficient quantity of the object cut through does not lie on each side of the mullion, to attract the eye across; and this, no doubt, is the reason why, in several Cinque-cento designs, where the head of the window is filled with a quantity of minute tracery, as in the windows of King's College Chapel; no attempt is made to extend the design from the lower lights into the tracery. Every principle must be more or less confined in its application by circumstances; but it is one thing to modify the application of a principle, and another to reject it altogether. And the rejection of the principle of carrying a subject across several lights of a window would involve, equally with the rejection of compositions having receding backgrounds, the further curtailment of the stock of subjects to which the choice of the glass painter is confined, without, as it seems to me, any commensurate result.

Charles Winston.*

CANNING-TOWN:

A NEW LONDON DISTRICT.

We have before now mentioned the manner in which Mr. Mare, the shipwright, has battled with Father Thames, and succeeded in planting his engines and steam-hammers on a spot which a few years ago was covered by every high tide. The establishment of this great manufactory, kept moving by the hands of 4,000 or 5,000 people; the Victoria Docks, and other works which are in progress in this neighbourhood, have led to the formation of a new town, unknown to the great mass of Londoners.

We all know the consequences of planting large populations on ill-adapted lands, without making provision for that most important necessary of accumulated life, *drainage;* and it might have been hoped that the sad effects in known instances would have led to the prevention of other similar mistakes. It is, however, not so; for on a part of the Plastow Marshes, not far from Mr. Mare's shipyard, Canning-town has been commenced, without the provision of either proper roads or drainage.

On one side of the new town an earthen embankment dams off the water of the Bow-creek. The level on which all the houses are placed is below that of the ordinary half-height of the Thames. Standing near the iron bridge which crosses Bow-creek, let us take a peep at the scene which presents itself. Near at hand

* We have received the following with reference to Mr. Scott's paper in our last:—"Sir: Mr. G. G. Scott, as a practitioner of Gothic architecture, may feel sore at his views not being universally received. But I protest against his assertion, as unjust and altogether fabulous, that I have been rendered hostile to 'the movement' by the illhumour of certain foolish zealots, whose peevish misrepresentations I have had to correct. Although fond of antiquarian pursuits, I have, in common with many sober-minded antiquaries, invariably opposed the attempt to mediævalize the nineteenth century; because, besides being otherwise objectionable, it appeared likely to lower the standard of art. My belief on the last point is corroborated by what I see continually. I may add, that it is not likely that Mr. Petit should have been disturbed by the treatment I have experienced from these friends of Mr. Scott, since he has always concurred with me in laughing at it, as something inexpressibly diverting. I am thus driven to crave permission to intrude on your valuable s; &c. and am, &c.
C. Winston."

CANNING-TOWN: A LONDON SUBURB.

is the new town, and on all sides of the green level London is marching with giant strides. A few years since, if a dozen people were seen crossing this bridge in the course of a day it was a matter of wonder: now the bridge has become a great thoroughfare. Nine or ten years since there were only two or three houses, and now look at them! It would surely suggest that the sewerage of London should be taken further afield. If they put it into this creek, or into Barking-creek, but little advantage will be gained. Our previous half measures have been attended with such an enormous expense and so much damage to health and life, that it is time we adopted another course. If the sewage is to be manufactured, and distributed as a manure over the land, instead of poisoning the water; or if for some time to come we must, for want of knowledge, continue to waste it;—in either case the manufacturing of the refuse, or the entrance of it into the Thames, ought to be at a safe distance from our two or three millions of people. If the sewerage of the north of London is to be passed into the river, it must, to be effectual, be nearer to the sea than Plastow-marsh or Barking-creek. It would be, to say the least, a waste of money, to carry the drainage and run it into the Thames at a point from which, instead of sweeping into the sea, it will come back and float to and fro past the City like the body of a poor boy drowned here some time ago, or the dog to which we have before alluded, and be deposited on the banks of Rotherhithe or Lambeth. We have spoken to many persons of experience on the river, men who have for years been acquainted with the currents, &c. of Father Thames, and there is but one opinion amongst these practical men. However, it is not our present object to say more on this important point. We would direct attention to our sketch, which will help those who cannot pay a visit to the place to understand the position of affairs.

In the view of Canning-town, as it appears from near to the iron bridge, the green level is shown extending over a great extent. Along the margin of this flat land, in every direction, houses, shops, public houses, and churches, are now to be seen skirting the level, and gaining every week further and further upon the space, which is chiefly several feet below the high-water mark of the Thames. The new town, which already consists of several long streets, will, in the course of a few years, spread out and meet the approaching houses, and all this level will be planted with dwellings and inhabited by many thousands of people. The artificial bank of Bow-creek and the embankment of the Thames are all that prevent the houses here from being flooded every high tide. To provide for the effectual drainage of this district by the ordinary means is impossible. The houses here have been erected without the means of either carrying off the refuse or properly getting rid of the damp. In course of time the *débris* of these and other houses will raise the level; but in the meantime it is sad to think of the sacrifice of human life which must take place without prompt measures. With some difficulty we managed to reach the place on foot from the turnpike road, and found the condition of the streets miserable: many of them, although the day was tolerably fine, were almost impassable, and vehicles sank almost up to the axletrees in the mud. In many parts were great pools of stagnant water. Several of the inhabitants said that if we had come a few days before, during the rain, it would not have been an easy matter to get along the streets at all. Most persons complain already of the drainage. We understand that it is proposed to take the sewerage to a certain depth, and pump it into the Thames by steam power. If something is not done, in two or three years' time the ground will be poisoned by cesspools, water will stand on the surface, and evils of a serious nature will follow.

In a score of years or less, Canning-town will be an important place, with its churches, omnibus and cab stations, and its masses of rich and poor. Let us hope for the introduction of measures proportionate to the extent of the future requirements. Flesh and blood are precious materials.

ON THE INFLUENCE OF LIGHT AND SHADOW IN ARCHITECTURAL COMPOSITION.*

AMONG the many studies of the architect, none deserves greater attention than that of the varied arrangements of light and shadow: by this means the first impression is made on the mind, of grandeur, or of meanness, of beauty, or of deformity. We see at a glance whether or not a master-hand has been engaged; for, should the *general effect* prove disagreeable, no labour on the details will ever compensate for that deficiency. But the architect who works upon some ascertained principle of effect will always be able, if he choose, to depend on the same knowledge for his details; and, from the fact of his being able to grasp the whole, will feel no difficulty in mastering the minor portions of his subject.

It is the want of this knowledge that so frequently produces disappointment after unrestricted outlay. Labour, the most costly, is thrown away on parts that never can help the general effect, because mere ornamentation will never produce it. It becomes, then, necessary to find some principles on which we may rest for guidance under given circumstances; and, although many obstacles may arise to the *perfect* realization of our conceptions; yet, if we are confident in the effect we wish to produce, these obstacles will never prevent a comparatively satisfactory result.

* The following paper, illustrated by sketches, was read at the Architectural Exhibition on the 13th instant.

It has been said, and, indeed, often repeated in print, with considerable authority of late years, that architects should confine themselves to the more severe character of geometrical drawings,—that *outline* or simple *form*, without substance, is *best* adapted to *ensure purity* of design,—and that in this manner their ideas will be better presented for public inspection than by any other means.

Without questioning the *use* of simple outline, I deny that it is *all* that is required, or that in its utmost perfection it will ever give a just and truthful idea of the reality. Light and shadow must ever exert the most powerful influence on architectural effect; and I am totally at a loss to conceive any reasonable argument that should prevent its being studied from the beginning of every work, in conjunction with the absolute necessities of arrangement. I think it will be pretty readily admitted that to judge of the merits of a thing it must be seen. Then *how* is an architectural composition to be judged of *before* it is *built?* By simply representing it as it will appear with all its lights and shadows truthfully displayed. Every one knows that it is an impossibility to see a building when executed as it was seen when drawn geometrically; and, although such drawings are necessary to the workman, they convey the most false impression to the general observer. In fact, it requires a mature and practised judgment to calculate, from geometrical drawings *alone*, the true effect *in execution*. I allude to these printed notions because I am of opinion that they have already had a tendency to divert the mind of the student from what I believe to be a healthy and useful course of study. I would not lead him to imagine that he must of necessity be either a Raffaelle or a Michelangelo; but *I do* think he would be more successful in the execution of his work as an architect if he studied *somewhat* more as a painter. By studying as a painter I do not mean that meretricious daubing which might be aptly called the gamboge and burnt sienna styles, but that he should find out and impress himself with the true principles of art, by which a large field would be opened to his imagination. He would see how nearly allied these principles are in *all* branches of *art*; and we should then have less chance of deploring the loss of opportunities, so frequently complained of when too late for remedy.

But to ascertain the value of this quality in architecture, let us suppose ourselves looking over some rich valley, with its varied beauties of rock, wood, and water. How grand, and yet how exquisitely delicate, are the lights and shadows as they fall on the natural objects! We are delighted with the harmony of the scene, until, in the midst of all, a huge mass of building destroys the charm. We detect its meanness from its want of depth in its shadows. The absence of light playing on graceful forms tells us it is *labour* without *mind*. It is a blot: it defaces the beauties of nature; and we execrate

the ignorance that could perpetrate a work so vile amidst so much loveliness.

But let us suppose in its place a classic temple, with its rich, deep shadows, among its columns, its broad and bold cornices, its delicate enrichments, all keeping their relative value to the whole. Will not this be the crowning interest of the view? Or let it be a Gothic shrine of English architecture, with its bold arches, and play of light upon its tracery, buttresses, and pinnacles. Should we not be attracted to this point as to a gem set in the face of the landscape, and be so strongly impressed with its value, its interest, and its being truly a work of art, that all other feelings would give place to the desire of more minute examination? I, of course, speak here of the general effect of light and shadow; but, if this produces at a glance so strong an influence on the mind, it must surely be one of the most important studies of the architect.

With painters there are three distinct principles of effect recognised; and, if the architect, while making his design, will consider the aspect under which it is to be generally seen, he will readily understand which of these effects it will be desirable to work up to. It may be objected, and at first sight it may appear a very fair objection, that if my suggestions are acted on, conventionality and mannerism will rule everything. But a little reflection on the various uses for which buildings are constructed (which must of course always rise paramount to every other consideration), will show us that such a result is not to be feared. Besides, these three simple principles to which I allude, admit in *themselves* of such *infinity* of modification, that instead of trammelling the *mind*, they become only *landmarks* to tell us *where we are*, and in which direction to *go* to find *what* we *want*.

In speaking of them as simple, I do not mean to say that this knowledge is attained without patient investigation and labour, for their very simplicity will only be acknowledged upon intimate acquaintance with them.

It is probable that my observations as to the *possibility* of an architect applying the knowledge of a painter may be received with considerable doubt by many. It may appear to them that artistic effect is a visionary idea, or only to be met with on the canvass of the painter, and that with materials such as brick and stone it is nonsense to expect it. They will say, "Give us practical knowledge in the way of building, and leave these theories to the painter, who alone can make use of them." My answer to these objections is this: The painter who represents on canvass that which is manifestly untrue in *nature* only creates disgust in the beholder. The architect who creates with certainty that which shall satisfy the eye of the painter has attained one of the highest qualifications of practical knowledge in his profession.

I have sketched slightly the three different effects referred to: they are each positive in their character, and distinct from each other.

The first with the *dark* in the centre, surrounded by light; the lower one with *light* in the centre, surrounded by *dark;* the middle one occupying the *medium* between light and shade, and having nearly equal portions of light and shade crossing each other.

You will observe that by one of these effects or the other, everything in nature must be seen; for if we look *towards* the light, any object between us and the light must be dark; and if we look *from* the light, or in the same direction as light itself, the objects will be more or less light according to their local colour; and, by looking *across* the rays of light, we shall have, of course, side light, with about the same quantity of shade on all objects within our view.

In the treatment of such a subject as the lower one, care must be taken that the centre light, which is actually the building, should spread itself out—apparently in the easy enjoyment of the space about it,—for nothing can look worse than a square band-box-looking house in such a situation. This object may generally be effected by the offices and outbuildings being partially brought into view, and by hiding their exact termination, giving an appearance of extent greater than they actually possess. The distribution of shadow on the central mass of light will determine the character of the structure; and if the nature of the requirements will admit of the greater mass of shadow being brought into the centre, with subordinate portions to the ends, and led off by the windows and minor details, the effect never can be bad. But in this mode of composition, the great point to guard against is the *equality of shadow;* for if a number of shadows of like force cross and re-cross this light, the brilliancy or breadth must be diminished and the general effect neutralised. The shadows should, therefore, if I may use the expression, be *clustered* rather than distributed over the whole surface, for if we look on a building charged with ornament in all its parts, we may at first sight be struck by the amount of labour bestowed on it, but it will fail to satisfy the judgment when viewed as a whole, because it wants breadth of light and depth of shadow.

In some buildings, such as Wollaton Hall, Nottinghamshire, for example, much undoubtedly depends on the sky line, or outer form of the building; but if deep recesses are formed within this shade, they will, being darker than the whole mass, throw out the face of the front as in reflected light, and if boldly executed will always create a rich and imposing effect. It is evident that thin and trifling ornament would be lost here. In working up to this principle of light and shadow, all materials and objects that will receive light in front, such as stone terraces, statues, or broad gravel walks, will not only heighten the effect by reflected light on the surface, but give cheerfulness to the rooms within; while grass or any dark material on which the shadow falls would, independently of the chill and damp of green adjoining the north side of a building, tend to neutralise and destroy the effect.

It is seldom, however, that we have the opportunity of making so diversified an outline as that of Wollaton Hall, and we must, therefore, depend more upon the *plan* for giving that diversity rather than the *elevation;* and in considering the north front of a building, it is therefore desirable that the face should be broken up so as to receive the sun into the masses of shade. These projections will receive the south-east and south-west sun, which will not only, by its positive light, but also, by its reflected light, enliven the whole of the north front. Everything, therefore, that tends to give a deeper shadow *within* the *boundary* of the shade,—by which the forms within will be relieved,—and every break of light on the outside, or edge of the shade *itself*, will tend to improve and give intensity to this effect.

I would here point out that each shadow has its centre, or a portion is darker than the mass; as also with the lights, *some portion* is lighter than the rest. And it is this quality of concentration, or of giving a focus to both the lights and the shadows, that gives *power* and *richness* to all the natural objects: and inasmuch as we follow out *this principle* in our works, they will be so far removed from *flatness* and *neutrality* of effect.

It is evidently a practical truth that to prevent confusion of ideas, the eye requires a certain degree of repose in *parts* of every composition: they are the quiet resting-places of the mind, from whence each portion is classified and rapidly understood. The *reservation* of portions which shall be *plain* and *simple* in their character is therefore of quite as much consequence in every design as the *addition* of enrichments; and this is not only applicable to ornament alone, but to the general effect of the whole. Ignorant persons, in their desire for display, heap one thing on another in the greatest profusion, in the vain expectation of captivating the mind by reckless expenditure. They only create a costly confusion, which, to cultivated taste, is so much the more disgusting from its vulgar pretensions.

A perfect and certain knowledge of how and where to bring these parts together, so that one harmonious whole shall first strike and interest the observer, and afterwards continue to satisfy his judgment, ought to be one of the leading points of architectural education.

I grant that to the student this will not appear, nor will it ever be an easy task. Perfection in any branch of learning never is easy. But that is no reason why the architect should rest satisfied to leave the arrangement of light and shade as a matter for chance only to regulate.

If there be such a thing as pre-eminent beauty and fitness in works that have been the admiration of ages, surely there must be a cause for such beauty, and a reason for such fitness. I would say, then, let us never rest until we find out this cause. Do not be so servile as to copy these works, but find out the cause that gives them the effect we admire, and you have the master-key in your own hands. This is genius,—this is the very foundation of taste.

The architect who practises his profession conscientiously, will never consider his labour in perfecting his building; but from the habits and usages of the profession, and perhaps from allowing themselves to rest on their purely constructive ability, there are some who never appear to go to *first causes* in the higher branches of their art, and who sometimes permit themselves to be talked down by amateurs. The consequence is, that any appearance of original thought is put down by the constant cry of, "Where's your authority?" For my part, I never could understand this cuckoo cry. Is it that we are labouring to deceive the future antiquary?

In the arrangement of light and shadow, the colour of the material must be taken into consideration; for if the building be of a very dark colour, it will be difficult to give it a pleasing effect.

The use of bricks appears to be coming into fashion from various considerations: but we should, I think, pause, before we allow the indiscriminate use of this material in external decoration. In situations that are tolerably free from the effects of smoke, a great degree of beauty may be attained by the judicious mixture of red and white, and other bricks. I say *judicious* mixture, for otherwise they are apt to appear like patchwork; but, if properly used, they always look well in the *country*, from the harmonious effect of red and white with green. But in London their colour is soon lost in one dingy coat of black, for they have a peculiar tendency to retain the soot, which rain washes *into* them rather than *off* them. The common stock brick, as used in London, is therefore fatal to anything like breadth of effect.

Portland-place in its *dimensions* is certainly one of the finest streets in London, but its really noble space is scarcely redeemed from meanness, by reason of its houses being built chiefly of brick.

But there is a material which by its general use in this metropolis has helped us over many difficulties; and yet in raising my voice in its favour, I may, for ought I know, be getting myself into difficulties,—for so much has been said about *truthfulness of material*, and the very phrase itself carrying with it a conviction of so much virtuous intention, that if I am inclined to receive it in this instance as containing more of *sound* than of *sense*, I fear I shall be at once put down as one so totally blind as to be incapable of receiving the new lights now breaking on our intellects.

Among the many strictures put forth with much authority by certain amateurs, cement and all stuccos for external decoration come in for unlimited abuse, and are held up for universal condemnation. I must say that this reprobation of a material which has redeemed London from the dingy monotony of brick, appears to me somewhat unreasonable. Those who remember it in the time of George III. will not, I think, be among the number who would restore its soot-begrimed walls of brick, however their consciences may suffer from the use of stucco.

Stone is certainly of all other materials the most beautiful and harmonious for the display of light and shade; but when stone is not to be had, stucco comes nearest to it in appearance: it preserves the work beneath from decay: it keeps out damp: it is easily restored; and at a trifling cost will look cheerful and new.

Now, in the name of common sense, why are we to forego these advantages? Is it because one or two crotchetty people would persuade us that we are telling an untruth? Then let us tell the honest truth, and say, "I use it because

I prefer *cheerfulness* to *gloom*, and it is the only thing I can get to answer that purpose." Whether this plain view of the case will satisfy these sticklers for truth at any price, or not,—it must be admitted that London requires a light material for architectural effect; as, from the nature of the climate and the smoky atmosphere, we shall always have plenty of shade.

In the treatment of street architecture, it is necessary that the horizontal lines of shadow should be kept so far of one uniform height as to satisfy the eye as to their extent. I mean that this uniform line may be both too long and too short. It is too long when, as in the city of Turin, the constant repetition of the same height of cornices becomes most tiresome and monotonous. It is too short, when (as is frequently observable in London), each small frontage asserts its independence in perfect disregard of its neighbour; and the result is, like many other cases of want of unanimity, that it is complete only in its confusion and total want of general effect.

Perhaps the best example that I can point out as the nearest to perfection in street architecture is that of the High-street in Oxford. Here there is just sufficient horizontal shadow to aid the perspective, and to satisfy the eye in comprehending each building as it rises to view in passing from one to the other,—enough variety to excite the imagination, and an alternate play of light and repose, that has always produced the most striking effect even to the casual observer.

I have said that colour itself may have much influence on light and shadow in architectural composition, for it will be seen immediately that *red* and *blue* will tell much more as shade than *yellow* and *white*. Hence, wherever brick is used, it will serve to direct and concentrate the attention on either the yellow or the white; but wherever used, it should be so blended by gradual means into the other colours as to prevent anything like a chequered appearance, and only to appear what it really is, merely ornamental material.

Thus far I will heartily agree with our new lights, and will hold up *my* feeble taper in their company; but of all the false tastes ever imposed by the tyranny of fashion, or the blind notions of the antiquary, that of bedaubing sculptured decorations with indiscriminate blue, yellow, red, and green paint, is the most barbarous. It is gilding refined gold;—nay, it is putting a baser metal than gold over gold itself. We laugh at the savage who, in his ignorance of the beauty of form, disfigures those limbs that are the admiration of an enlightened mind; but that *we* in the *nineteenth* century, with all our boasted refinement—with our progress of mind and manly self-dependence—should allow ourselves to be imposed on by the vulgar notion of picking out a beautifully executed design with the most gaudy pigments that can be obtained, is to me most unaccountable. I know that here again I am on dangerous ground. I feel that I am rowing against the stream—that my glimmering lamp is in danger of being puffed out by the overwhelming authority of antiquity; but, if we refer to antiquity for precedents and beauty, history will show that even here was a gradual development of that perfection which we admire, and we shall as surely perceive that so soon as the *greater principles* of art were lost sight of, art itself became debased in the hands of our forefathers.

Nothing can, however, be further from my intention than to condemn the use of colour altogether, for I am too well aware of the glorious combinations of colour in nature, to neglect or think lightly of her schooling; but sculptured stone is NOT the place for it in any architectural composition. It is allowing the labourer to destroy the work of the master. Who would think of painting the Apollo Belvidere, or put on him red drapery, and nicely paint his eyes, lips, and eyebrows? No! The hand that executes a piece of ornamental sculpture stands in no need of colour to pick out the groundwork with red, blue, or green. Such an act is like placing an elegant poem in the hands of the town-crier.

The architect requires only the delicate gradations of light and shade in his composition to work out his meaning; and this will harmonize with, but never obtrude itself on, the general features of the design.

Returning to the three principles of effect already alluded to, they may be modified to almost any extent, and so that a chief light is reserved, others may be introduced, should the subject require them. Of course the greater the quantity of dark round a light, the brighter that light will appear. The value of shadow, therefore, as a means of giving breadth and brilliancy of effect should not be forgotten in the choice of a site, especially for such a thing as a mansion in the country. Here the very shadows of the house will appear light and delicate in their colour, if the shadow of foliage or any dark object is seen in their vicinity. Indeed, the choice of a background is of much more consequence in architectural effect than is generally supposed. In many instances we see proprietors, in their wild rage for building, sweep away everything before them, and are afterwards obliged to plant round their houses trees that can never serve the purpose for which they are planted within their lifetime.

Light and shade, therefore, in the choice of a site in the country, is a point of the utmost consequence to the architect; for, however good in design or arrangement, he will find a difficulty in making his structure interesting if he be completely isolated from every other object; and I would here recommend to the student, that instead of too much line and rule work, he should accustom himself to sketch his designs *always* in perspective before making his geometrical elevation, together with the situation in which it is to be built. This will at once test his idea, and save him much trouble in the end, of course always supposing him to have an idea.

Perhaps I ought not to leave this subject without a few words on interior effect. In this I fancy we are somewhat excelled by our continental neighbours, especially in modern works: at all events the mode of admitting light to the interior of our public and private buildings is worthy of more consideration than it generally obtains; for, provided a sufficient quantity of light is supposed to be admitted for the uses of the building, little attention is paid to its picturesque or artistic effect; and yet we shall find that the comfort of a dwelling, or the interior beauty of a public building, consists more in the agreeable distribution of its light than we at first suspect. It will be found that in all cases where the positive light from the sky can be kept off the eye, the architectural proportions will be seen to the greatest advantage; or, in other words, whenever the actual source of light can be so concealed as to allow its rays to illuminate the particular object most interesting or central, the most forcible and agreeable effect of light and shade will be the result; for, as in the position we ourselves occupy we are in the shade, the principal light will be surrounded by shadow, and by its brilliancy alone will illuminate by a sweet and soft reflection every thing around it.

One of the effects may also be produced in another way, which is by the introduction of light from the top of a building, as in the magnificent church of the Madeleine, at Paris, and also in the Pantheon, at Rome, where, by its admission in this manner, we not only have a flood of light passing through the centre, but every point of the architecture is illuminated, and throws broad but softened shadows throughout the building. I once saw this latter structure, by a sudden rising of the Tiber, flooded by its waters, and the whole height of its splendid architecture reflected as in a mirror. The effect had all the characteristics that Burke describes as necessary to the sublime and beautiful, viz. height, depth, and space. From the many advantages arising from this mode of lighting buildings from the top, the wonder is that it is not more frequently adopted.

In our own churches we find so little attention paid to their being agreeably lighted, as frequently to have a large east window glaring full in the eyes of the congregation. The consequence is, that the most painful sensation is felt in attempting to look into the gloom that surrounds the communion-table, or to witness the service; and in many of these structures the head of the clergyman, while preaching, can only be distinguished as a dark object between the congregation and the light. This does not require argument to prove that it is totally wrong. The light should be thrown on the communion-table, and the objects about it, and enough on the head of the preacher to show the expression of the face, which, if not absolutely necessary to the thorough comprehension of his meaning, prevents the mind from being disturbed by the constant effort to penetrate the gloom without effect.

In our modern churches our architects have, by their adoption of a subdued light in their glass, acknowledged the principle that there may be too much light in an ecclesiastical building. By thus subduing the light, a soft and quiet effect is certainly attained, but at the expense of retaining too much neutrality. A small quantity of pure light properly introduced would give point and brilliancy without destroying the sober tone of the whole.

In a church built by myself at Highbury, a few years since, I have endeavoured to carry this principle into execution. I am of course greatly indebted to the stained glass for the means of doing so, and I would here call your attention to the value of colour in this situation. The stone carving on the screen gives additional richness to the colour, while the deep rich tones of the colour itself adds another charm to the delicate pearly shadows and sparkling lights of the stone carving. It is in such situations as this that the one will so powerfully assist the other. It may be truly said in regard to art, that colour put into unskilful hands is like placing sharp instruments in the hands of a child,—a hundred to one that some mischief is done. Should any be doubtful of the truth of this, let them explain why so many gradations exist between the works of a *sign painter* and the productions of a *Titian*.

Should these observations be the means of inducing the student to think more of the *principles of design*, and less of the mere act of copying, which never will lead to great things, my object will be accomplished. Let him imbue his mind thoroughly with the good and the beautiful in each particular style—for all have their beauties,—and I am confident there is talent, energy, and originality of thought in the present generation sufficient to stamp the present era with its own peculiar mark,—which shall be in no wise inferior to any other within the history of our profession.

Thomas Allom.

FOREIGN INTELLIGENCE.

Constantinople.—A Relic of Delphi.—There have been made here, of late, excavations between the two obelisks on the Hippodrome, for uncovering the foundation of the serpented bronze column (*Schlangensäule*). There can be no doubt that this is the same column which bore once in Delphi the golden tripod which the Greeks had consecrated to the Delphic Apollo after the victory over Xerxes. The golden tripod was subsequently taken away by the Phoceans, but the bronze column was still at Delphi, in the time of Pausanias. Later still, even, the column was brought by Constantine to Constantinople, and exhibited on the Hippodrome, and when lately the ground around it was excavated, it was found that it stuck two mètres under the surface of the soil. On the spirals of the serpents, which constitute this column, some inscriptions were found, but much corroded by the *errugo*. On the second spiral from below is to be read, "*Amprak. . . . Fo . . .*," and on the seventh spiral, "*Tenio.*" According to Herodotus, the name of the *Tenians* was inscribed on the tripod of Delphi.

Paris: New Works at the Ecole Militaire.—This interesting building is receiving great additions, under the directions of the Government engineers. Two pavilions will be added, forming the continuation of the façade on the Champs de Mars, being 101 mètres long and 15 mètres deep. They are one story high, and are surmounted by a pediment and an attic. The sculptures of the pediment represent the imperial eagle, &c. The edifice and the lateral galleries of the Cour d'Honneur, have been completely restored, and the fine railing of the Cour Montant equally completed. Other improvements have thence resulted, for the whole

space of the Champs de Mars, and a number of houses, which would have masqued the new pavilions, have been demolished. Thus an area of 80,000 square mètres has been added to the immense place, which borders on the south of the palace of the Ecole Militaire.

Paris: Assyrian Sarcophagus.—The sarcophagus of the king of Sidon, Asmunazar, which had been presented to the French Museum, by the Duke de Luines, and conveyed from Beyrout to Paris, has been placed in the Asiatic collection of the Louvre, near to the Phœnician sarcophagus, of white marble, which also has been presented by M. Peritié, at Beyrout. At the last sitting of the Institute, M. de Luines read a paper on the sarcophagus of Asmunazar, which contained a translation of the Phœnician inscription, engraved in fine characters on the lid, and containing the name of the king and his ancestors.

Cologne: Mural Paintings.—The Provincial Government of Cologne have ordered M. Hohe, professor of drawing, to copy and trace the old mural paintings of St. Gereon's Church. They belong to the thirteenth century, and are conspicuous for correct design and brilliant colouring, and represent figures of saints, above life size; containing also the apocalyptic signs of the evangelists, who stand in the niches of the chapel. The surrounding ornaments are in the Romanic character, passing somewhat into the Gothic.

Munich Art-Union.—This institution numbered, last year, 3,330 members, who paid a subscription of 39,141 florins. The Union purchased during that period, 117 articles of art, amongst which were mostly oil paintings, for which they expended 25,000 florins: the remaining 3,500 were expended in members' prizes.

Vienna.—The Second Spire of St. Stephen's.—The windows of the south gable of the Vienna Cathedral having been restored, the completion of the second spire is in contemplation. To lessen the expense, it is intended to erect an iron framework, in which the masonry is to be inserted; the same process (according to our informant) as was resorted to in the restoration of the other spire in the years 1839 and 1842. The expenses of this vast undertaking are estimated at 500,000 florins, but the Common Council of Vienna are willing to contribute 15,000 annually during the whole time of the rebuilding.

The largest Locomotive in the World—the Duke of Brabant, constructed at Seraign, and which attracted so much notice at the Paris Exhibition, is now at work at Charleroy. Its weight is 6,000 kilos, and it can move fifty waggons of 10,000 kilos each—about a million of pounds.

PROVINCIAL NEWS.

Kingskerswell, near Torquay.—A contract for the erection of parochial schools has just been made with a local builder for the sum of 487*l.* They will be commenced forthwith, and carried out according to the designs of Mr. J. W. Hugall, of Cheltenham.

Romsey.—The nave of the Abbey Church of Romsey, which had been closed for many months during the construction of a new roof over it, in consequence of the utter decay of the old one, was last Sunday opened again for public worship. The new roof is similar in its design to the ancient one, which had from time to time been lowered in its pitch, as the ends of the timbers became decayed. The roof is now framed to the original height, and gives great dignity to the building. It is internally of a waggon-headed form, divided into panels by oak ribs and bosses as in the previous roof. Messrs. Gover and Fluder were the contractors, under the superintendence of Mr. Ferrey. A new vicarage-house, in the Mediæval style, is also nearly completed from the design of Mr. Ferrey.

Cambridge.—In allusion to some misapprehension said to exist in this city as to the expense of laying down supply pipes by the water company, and to the fact that the company, at their own expense, lay down the service pipes to the fronts of all houses or premises on the application of the occupier to be supplied with water, the *Cambridge Chronicle* says,—"We are informed that the cost of laying down the service pipes inside the consumer's premises does not exceed 2*s.* per yard for pipes of ½ inch bore, and 3*s.* per yard for pipes of ¾ inch bore, of the weights prescribed by the company's regulations; and that the average cost of laying on the water into houses in Barnwell and Castle-end, where the water is most required, is under 15*s.* to each consumer, and in many cases much less."

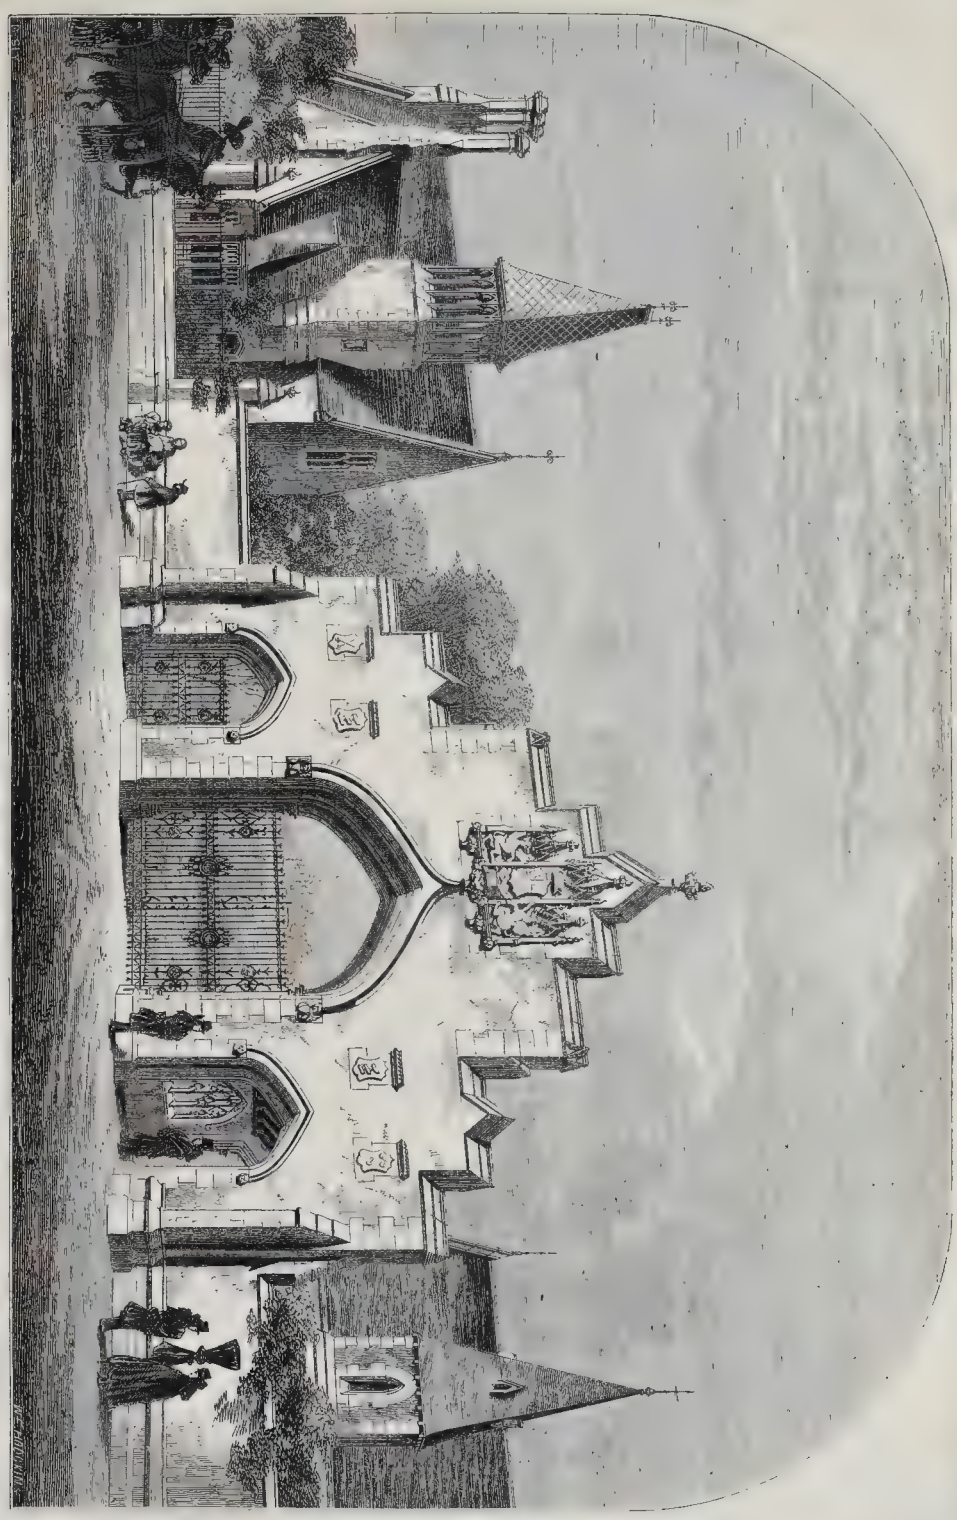
Birmingham.—Mr. Adderley, M.P. having offered to set aside ten acres of land on his estate at Saltley, for a park and recreation-ground open to the public, active steps are to be taken to render the offer available, to form a Working Man's Park Association, and take the management of the park. A large quantity of land is reserved all round for building purposes, but until built upon will form the play-ground. Mr. Adderley intends to erect at the principal entrance a museum and reading-room, at a cost of 1,300*l.*

Liverpool.—The Town Council have given powers to the Free Library and Museum Committee to raise 20,000*l.* the interest to be paid out of the Museum Rate, for the purchase of land opposite St. George's-hall, for the erection of the proposed new buildings, towards the construction of which Mr. W. Brown has promised 6,000*l.*

West Hartlepool.—The market buildings will be of considerable size, to allow for the future extension of the town, which is rapidly increasing in population and house property. The façade is of stone and iron. At each end of the building there will be three separate entrances, under archways, formed in an Ionic façade. The roof is in three spans, and circular in form.

York.—The contractors for an extensive drainage of this city, Messrs. Swire and Blair, have completed their contract, to the satisfaction, apparently, of the authorities; but scarcely to their own, we should think, since they must be heavy losers by the contract. They have constructed 5,061 yards of sewers, at a total cost to them (including some extra works) of 8,369*l.* according to the local *Herald*. The sum for which they contracted to do the whole (exclusive of the extras) was 3,550*l.* Their tender was the lowest of eight, the others ranging from 4,116*l.* to 6,797*l.* 3*s.* "Not having tried the strata previously to having given in their estimate [did *any* of the competitors incur sufficient expense for such a purpose on the mere chance of obtaining the contract?], they met with unforeseen difficulties, particularly on the Mount." Nevertheless, they honourably fulfilled their contract; but the Corporation in consideration of difficulties which it is obvious not one of the competitors fully appreciated, contributed an additional sum of 641*l.* which, with 250*l.* already paid on account of the Mount drainage, made up the sum of 891*l.* which the contractors had expended on that portion of the drainage. In all, the contractors appear to have received 5,067*l.*; so that the loss on the outlay in the contract amounted to 3,302*l.* exclusive of their own labour and anxiety.—Amongst other great improvements of this city deemed desirable, the paper already quoted specifies a spacious Market-house.

Huddersfield—National Schools, with teacher's house, are being erected at Milnsbridge, a manufacturing village near Huddersfield. Within the last few years the increase of population has been so great, that the present schools in connection with the church have been found inadequate to meet the wants of the locality. The new schools consist of a general school, 60 feet by 30 feet, for mixed classes of boys and girls, with a class-room attached, and calculated to hold 280 children; an infants' school, 44 feet by 21 feet, for 120 children; making a total accommodation for 400 children; and a teacher's house, containing six rooms, arranged on two floors: this is placed in the centre of the building between the two school-rooms. The building faces the Manchester-road, and stands upon one-third of an acre of land. Mr. E. W. Tarn, of London, is the architect; and Messrs. Hampshire, of Huddersfield, have contracted for the whole building (except the carpenter's work) at 768*l.* The carpenter's work (including desks and other fittings) is contracted for by Mr. Youdon, of Huddersfield, at 299*l.* 10*s.* The style adopted is the Early English. The total cost, including the site, will not exceed 1,300*l.*



Dundee.—Exertions are being made here for the realization of a large public hall, which is much wanted. The *Dundee Warder* in reporting a meeting held on the subject, urges the propriety of looking a little more to the outward aspect and ornamental character desirable in such an edifice, than some of the mill-owning gentlemen who take an interest in the project seem to contemplate. A hall capable of accommodating 1,500 to 2,000 persons appears to be what is required; and the *Warder* remarks, that 3,000*l.* ought to be the means aimed at, including 500*l.* or thereby, for sightly frontage. The site suggested is one of two near Reform-street.

THE CITY OF LONDON CEMETERY, AT ILFORD.

We had proposed to withhold our concluding illustration of this cemetery, namely, the Entrance Gateway, Lodge, and Residence, until it was opened; but this event still seems so uncertain, that we will not postpone the view any longer. The commissioners appear to be in great difficulties, mainly arising out of the construction of the Act, which authorised parochial burial boards to lay out cemeteries for their respective parishes, and for the protection of the clergy and church officials, gave those officers powers of dissenting, objecting, or negativing with regard to fees, and in other respects. This might have acted very well where the Burial Board was constituted for one parish only, and where, consequently, there was but one clergyman, sexton, and clerk, to consult about their fees and other things; but as the Commissioners of Sewers have laid out a cemetery for the whole City, which comprises more than a hundred parishes, to nearly the whole of which parishes there are distinct clergymen and other officers, and as the consent of the whole of these vestries is requisite to fees and other respects, it must be seen what difficulties lie in the way of a comfortable adjustment of the affair.

Were we to assert that the question of fees is really the sole obstacle to consecrating and opening, it would be vehemently denied by many; but it is singular that no obstacles showed themselves until the question of fees to the clergy was entered upon. The commissioners offered a graduated scale of fees, but this did not appear to be satisfactory, and immediately afterwards the obstacles all sprang up in a bunch. The ground could not be consecrated because there was a bridle road, used principally by one or two gentlemen, who go through on horseback occasionally, although this had been thought of no consequence before. Another objection about a rent-charge on the whole of the Earl of Mornington's estate in Essex was made; then came the objection to the commission appointing a chaplain, and a host of others, into which we may not enter. If in some parishes the original fees are insisted upon (and which, perhaps, legally can be done), as much as 4*l.* 5*l.* and 6*l.* will have to be paid for one interment, and of course, in such case, that body would not be buried in the City Cemetery when they could avoid it by going to another cemetery; and if every one of the 101 parishes were to have a different scale of charges, nobody who wished to bury a body in the City Cemetery would know what they would have to pay for it. Thus the matter stands. The offer of 6*s.* made by the commission for each body has not yet been accepted. The commission have promulgated their table of charges for interments among the various vestries; and each of the 100 vestries, clergymen, churchwardens, clerks, and sextons, are now discussing and criticising. All the difficulties, we believe, are nearly got over but this. Probably the commission will be obliged after all to go to Parliament, to get the Legislature to fix the scale of remuneration to the clergy and others, and to enable the Burial-Board to do the best they can for the citizens.

Other views and particulars will be found at p. 578, vol. xiii.; and p. 30, in present volume: we need scarcely repeat that Mr. Haywood was the architect.

ENTRANCE GATEWAY, CITY OF LONDON CEMETERY.—MR. WILLIAM HAYWOOD, ARCHITECT.

CHURCH-BUILDING NEWS.

Lincoln.—The Wesleyan chapel here was re-opened on 7th inst. The lower part of it has been remodelled, the gas rearranged, a new organ introduced, and the whole throughout repainted and decorated. The standard lights in the gallery have been removed, the gallery, with the body of the chapel, being now lighted from the ceiling, in which a sun-light is fixed, "giving," says the local *Chronicle*, "the effect of a mid-day sun." The heating apparatus was manufactured by the patentees, Messrs. Longbottom, of Leeds. These improvements and alterations have cost 1,111*l.* The general works have been executed by Mr. C. Ward, builder, and the painting and decorations by Messrs. Pilkington and Scott. The whole has been carried out under the directions and superintendence of Messrs. Bellamy and Hardy, of Lincoln, architects.

Hastings.—The town council have recently awarded the premium of 10*l.* offered for the best design for laying out their proposed cemetery, to Mr. H. Carpenter, of Brighton, architect. The episcopal and dissenters' chapels, with waiting-rooms and vestries attached, will form one block of buildings. The plan also contemplates the construction of catacombs at the end of the principal avenue, surmounted by a terrace, consisting of a series of Gothic arches in the Decorated style.

Cowes.—The tenders for the wall round the cemetery were as follows, according to the *Hampshire Advertiser:* — Phillis, 195*l.* 15s.; Cox, 197*l.* 10s.; T. Wheeler, 209*l.* 10s.; Sibick, 246*l.* 16s.; Ball, 260*l.* 10s.; Hardy, 265*l.*; G. Wheeler, 275*l.*; R. Taylor, 295*l.* That of Mr. Phillis, of Southampton, being the lowest, was accepted. The tenders for drainage and road-making were considered so excessively high, that they were severally declined, the high price being attributed to the mistake of glazed pipes having been inserted instead of drain-pipes.—— At a meeting of the board last week, Mr. Pritchard's tender for draining the cemetery and making the roads was accepted, at 152*l.* for the principal portion and 215*l.* for the ground about to be enclosed; and contracts are issued for the erection of two chapels, lodge, and receiving-house.

Sherborne.—At a recent meeting of the Local Burial Board, various works were let;—Mr. Stephens, for making roads, laying out and planting, draining, fences, &c. 631*l.* 17s.; Mr. Guppy, for building the Episcopal chapel and lodge, 812*l.* 15*l.*; Mr. Down, for building the Dissenters' chapel, reception-house, lych-gate, and entrance, 676*l.* 10s. 8d.: total, 2,121*l.* 2s. 8d. The board, having various tenders, selected the above three, being about 30*l.* below all other classifications they could make. The chapels are Early English, the Episcopal having a bell-turret, the Dissenters' a wheel window, and both alike in size. The board have commenced the works.

Rochdale.—The new church of St. Alban's, Rochdale, was consecrated by the Bishop of Manchester, on Saturday in week before last. The architect was Mr. Joseph Clarke, of London. The edifice stands on an eminence at Pinfold, and has a spire 140 feet high. The windows throughout, excepting a large east window, are glazed in grissaille patterns. Mr. Hardman has prepared sketches for the east window from the designs of the architect. The altar-table, standing on a floor of encaustic tiles, with which the whole of the chancel is laid, is of oak, carved by Mr. H. Ringham, of Ipswich. The roof of chancel is waggon-headed and panelled. It is intended, at some future time, to introduce colour into this roof, as well as more generally throughout the church, a specimen of which has been shown on the nave roof. The nave has north and south aisles, the tower occupying the south-west angle, and serving as a porch. The church is filled with low open seats, worked in pitch pine, stained. The nave floor is paved with Peake's tiles. Flues are constructed for heating the church. At the west end it has been found necessary to erect a gallery for children. The stone carving throughout the church is by Mr. Bonehill, of Manchester. Mr. Thomas Booth was clerk of the works. The tender for the building was 4,100*l.* The walls are of parpoint, with Huddersfield stone for all external dressings, and Bath stone for all internal work. The renovation of the old parish church, under the same architect, will shortly be recommenced. The contractor, during the winter, has been framing the new nave roof, and this, including the re-setting of the centres, which are insecure, and re-building the clerestory walls, will complete the second portion of the works.

METROPOLITAN BOARD OF WORKS.

AT a meeting on Friday 15th, Mr. John Thwaites, the president, in the chair, the committee recommended, in the engineers' department, three assistant engineers, at a salary of 350*l.* per annum each, with 50*l.* each as travelling expenses; six clerks of the works, at three guineas per week each; six draughtsmen, four at three guineas, and two at two-and-a-half guineas per week each; and four engineers' clerks, the first at 175*l.* the second 150*l.* and the third and fourth clerks 100*l.* per year each. In the architects' department two clerks were recommended, the first at 200*l.* and the second at 150*l.* per annum. The report was ultimately adopted. As to the salaries of clerks in the secretaries' department, the second first-class clerk's salary was raised from 300*l.* to 350*l.* per annum, the same as the first clerk; and the salaries of the second and third clerks were reduced to 185*l.* and 175*l.* Mr. Collinson's motion,—

"That, taking into consideration the greatly increased and daily increasing amount of traffic over London-bridge, and in Wellington-street, and High-street, Southwark, and also considering that there is a sum of 80,000*l.* arising from the coal duties set apart for making improvements in Southwark, it is most desirable that immediate and active measures be taken to provide for making a new line of street from some part of the High-street, Southwark, towards the western part of the district," was put aside by a resolution, — "That the board proceed to the next business."

THE SANITARY WORKS OF CARLISLE.

THE sewers and drains for Carlisle have been completed at a total cost of about 23,300*l.* The annual rate in the pound to pay principal and interest in thirty years is sixpence. At a meeting of the health committee on the 8th inst. it was resolved, on the motion of the mayor, Dr. Elliott, "That the thanks of this meeting be given to Robert Rawlinson, Esq. C.E. for the efficient manner in which he has carried out the works for sewering the town, and the exactitude with which the original estimate has been adhered to." This resolution of the board and town council must have been the more gratifying to the engineer as there was a violent local opposition at the commencement of the works.

For ourselves, we are glad to find that the sanitary works of a town can be brought to a close satisfactorily for something near the original estimate: we have been troubled with grumbling more than enough, and are pleased to find a local board finish without a complaint. Sanitary improvement has been fairly started: opposition may delay, but cannot stop it.

THE DESIGNS FOR AN OMNIBUS.

THE Directors of the London General Omnibus Company having offered a premium for the best design for an omnibus, received a large number of drawings and models, and appointed three gentlemen not connected with the company to decide as to their respective merits. The following report, which has just been addressed to the company by the referees, will tell its own story:—

"Gentlemen:—Acting in accordance with your request, as adjudicators upon the designs for an omnibus, sent in reply to your offered premium of 100*l.* for the best, we have had before us designs and models submitted by seventy-five competitors. Several of these having been deposited after the date fixed in your advertisement, and on other grounds not coming within the terms of the competition, were at once put aside. The remainder we have carefully examined with reference to the requirements set forth by you, and to the police regulations; and we have first to express our regret that, although many of the propositions display considerable ingenuity, and offer here and there improvements, we do not find anyone design of supereminent merit, or calculated, in its present shape, to afford that increased amount of comfort and accommodation your company, with praiseworthy foresight, desires to give the public, and which will doubtless be looked for at your hands. Inasmuch, however, as we are required to select one of the designs as the best amongst those submitted, considered with regard to your stipulations and wants, we beg leave to point out the design No. 64, sent in by Mr. Miller, of Hammersmith. Inquiry of Mr. Miller, and the examination of a full-sized omnibus built by him (after arriving at this determination), have shown us that if his intentions were more completely expressed in his drawing than is the case, the design would be more worthy of the premium. We must repeat, that we find no design that we can recommend for adoption intact, or which, to speak truly, is worth the premium offered; although there are points about some of the designs which, being combined, would aid in producing what you and the public desire,—a light, commodious, and well-ventilated omnibus.

(Signed) "CHARLES MANBY,
GEORGE GODWIN,
THOS. WRIGHT."

Several architects were amongst the competitors (Messrs. Salvin, jun.; Truefitt; Wilson, of Bath; &c.); and there were suggestions from Capt. Fowke, Capt. Wilson, Mr. Lott, and others unconnected with the trade.

Mr. Clemence's "Excelsior" (No. 20), Mr. Ayshford's saloon omnibus, Rock and Gowar's design, Rimmel's (No. 22), and others have good points.

Those designs in which any considerable ingenuity is displayed are mostly impracticable.

The selected design (Miller's) has circular ends, upright sides down to the seat, so as to give greater width at that point, to enable the sitter to draw back when a passenger is passing him; a well for the legs, narrower than the upper part, which permits the body of the carriage to hang nearer to the ground than in those ordinarily in use; and a simplification of the springs.

THE MEDALS OF THE ROYAL INSTITUTE OF BRITISH ARCHITECTS.

AT a special general meeting of the Institute, held on Monday evening, February 18th,

The Royal gold medal was unanimously awarded, subject to her Majesty's gracious approval, to William Tite, Fellow, F.R.S. M.P.

The Soane medallion was awarded to Mr. Leonard R. Roberts, of Sackville-street, Piccadilly, for his design for a town mansion.

A medal of merit was awarded to Mr. Thomas C. Sorby, of Guildford-street, Russell-square, for his design for Law Courts.

A medal of merit to Mr. James Blake, of Handsworth, Birmingham, for his design for a town mansion.

And the silver medal of the Institute to Mr. T. A. Britton, of Camden-town, for an essay on "The Timber growing Countries of Europe and America."

The students' prize in books for monthly sketches was awarded to Mr. C. N. Beazley.

The subjects for competition for the current year were announced. Among them are a metropolitan hotel, and illustrations of mediæval buildings in Ireland and Scotland, hitherto unpublished, with descriptive particulars.

THE CONDITION OF THE THAMES.

INSTITUTION OF CIVIL ENGINEERS.

IN the course of the discussion of Mr. Robinson's paper "On the Past and Present Condition of the River Thames," Jan. 22nd and 29th, one of the fallacies of the paper was shown to be the assumption of the inability or the unwillingness of the inhabitants of the metropolis to find such a sum as 3,000,000*l.* for restoring to a satisfactory state their excellent river, when it could be done by an annual rate of threepence in the pound, on the rateable value of the fixed property of the metropolis, taken at 12,000,000*l.* per annum, or a little more than one farthing in the pound on the annual income of the 2,500,000 inhabitants, which had been estimated at 100,000,000*l.*: a threepenny rate on rateable property would pay 4*l.* per cent. interest on the capital, and extinguish the principal in forty years; without taking into account any return for the produce of the sewerage, and without calculating upon any augmentation of the population and property of the metropolis, although they did, in point of fact, increase 15 per cent. in every succeeding cycle of ten years.

The real cause of failure in the various plans that had been proposed for doing away with the pollution of the Thames and for improving the sewerage of the metropolis, during the last few years, was to be sought in the dissensions and divisions among the commissioners of the successive Boards of Sewers. The fierce conflict between the advocates of the "big sewer" and the "little pipe" systems, emulating Gulliver's controversy between the "big Endians" and the "little Endians," although, at first, amusing to the spectators, had become serious in retarding

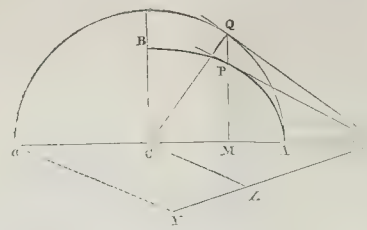
progress, and had prevented the adequate use of material which, if properly employed, was calculated to be an important agent in a great improvement, for the benefit of the public, whose health and comfort were dependent upon the promptitude and vigour of the operations of sewerage.

If the members of the Institution would unanimously insist upon the impropriety of permitting any sewage matter to be poured into the Thames, within a certain distance of the metropolis, the calm but confident expression of their opinion would carry conviction to the minds of the public. Let the true, scientific, and practical principles be so settled, and the public would readily supply the means for execution. The people did not like filth, and would not tolerate it in any form; nor did they like having the tax-collector's hand in their pockets too frequently; but for the sake of cleanly homes and wholesome air they would pay handsomely, provided the matter did not savour of a job.

The question,—to whom did the river belong, and who was to blame for its present condition? came under consideration, and the claim of the Crown was strongly combatted. The citizens naturally resisted so monstrous a claim: they asked to have the question tried by the short and inexpensive process of the Common Law Courts, but were introduced to the Lord Chancellor, before whom, during the last twelve years, there had been already executed more parallels, zig-zags, and other tortuous approaches and exhibitions of strategy, than before Sebastopol, without ever yet arriving at the stage of examining a single witness, or ascertaining one solitary fact.

The Corporation proposed to place the whole management of the river in a smaller committee of their own body, under the control of an Act of Parliament, and to borrow upon their own landed property 300,000*l.* to aid the execution of the plan.

This noble design had, however, been put in suspense by the Crown lawyers, who had filed an information, and obtained an injunction to stop the works. They sought to wrest the right to the soil of the river from the Corporation, and claimed to have the improvement fund as part of the hereditary revenues of the Crown, to be applied to the private uses of the Sovereign, instead of appropriating the whole fund, as the Corporation proposed, to the improvement of the river. The Corporation had strenuously resisted this; and the suit had been pending twelve years, during which time the river had been suffering from the want of that vigorous treatment which the Corporation were disposed, under the advice of the engineers, to have applied to it out of their own funds.



If the plan recommended by Mr. Walker and his colleagues was not a proper remedy for existing evils, a better system should be sought for at the hands of competent advisers, and it ought to be carried out by the Corporation, or the Crown, or some other authority; but the Corporation could not be expected to expend any more money in the state of uncertainty created by the Chancery suit. They had already indorsed the bonds of the navigation fund to the extent of 150,000*l.* the interest of which a falling revenue was not now sufficient to pay; besides which the Corporation had advanced above 60,000*l.* in removing shoals and other improvements, even whilst they were compelled to waste a large sum annually in law costs.

It was difficult to conceive how any objections could be raised to a plan so evidently for the improvement of the river and the benefit of the metropolis, without adding to the funds or the patronage of the Corporation. Yet there was every appearance of the suit being interminable, because in reality the question did not relate to the Thames alone. If the claim of the Crown could be successfully maintained, it would enable the Royal Prerogative to take possession, as its appanage, of the shores of Birkenhead and elsewhere; and then, at the commencement of some new reign, the Crown might say that such acquired demesnes, in addition to the woods and forests, and other acknowledged hereditary revenues of the Crown, were preferable to the civil list granted by the representatives of the nation, for the support of the Sovereign. This, then, was only the thin edge of the wedge, and it was incumbent on all to aid in resisting such unjust claims.

Composition for Roofing, &c.—A specimen of Lancaster's "Lignum Textile" was lately exhibited at the Streatham Gardeners' Society's rooms, and after some discussion on its merits, was admitted, says the *Notts Guardian*, to be a desirable and useful article for covering frames, houses, pits, &c. in winter. The material is described as "woven wood or veneer, dressed with some waterproof composition, which, after being passed between heavy rollers and exposed to the atmosphere, is said to become nearly as hard as metal."

GEOMETRICAL PROPERTIES OF CONIC SECTIONS.

THE ELLIPSE.*

A straight line which touches a curve at any point without cutting it, is called the *tangent* to the curve at that point, and it is the straight line which appears to blend with the curve at the point of contact. If a body in motion is compelled by any force to move in a certain curve, the moment that force ceases to act, the body will leave the curve, and move on in the straight line, which is the tangent at the point where the force ceases, supposing no other force to act on the body. This tendency in moving bodies to fly off at a tangent gives rise to the well-known force called *centrifugal force*, and is simply the natural tendency of bodies to move in a straight line, when not acted on by any external force.

The drawing of a tangent to a curve has always been considered an important problem. Suppose it required to draw a tangent at the point P on the ellipse. Since a straight line can always be drawn when any two points thereon are found, we have only to find the point T, where the tangent will meet the axis of the ellipse, and then draw a line through P and T. To do this most readily, we make use of the circumscribed circle. Draw an ordinate to the ellipse at P, and produce it until it meets the circle in Q; then draw the radius C Q, and draw a line Q T perpendicular to C Q; then Q T will be the tangent of the circle at Q. Now it is one of the properties of the ellipse that the *sub-tangent*, M T, *for any one ordinate*, M P Q, *is the same for all ellipses having the same major axis*. Hence it follows that T is the point on the axis where the tangent at P will cut it.

If it is required from any point T on the axis of the ellipse to draw a tangent to the curve, it will be necessary to find the point M at the foot of the ordinate, and then to draw the ordinate M P at right angles to the axis. Now one of the properties of the ellipse is that C T : C A = C A : C M, or C M *is a third proportional to* C T *and* C A.

The length, C M, can therefore be found geometrically by the sixth book of Euclid in the following manner:—

Draw any line, T Y, and take T X = C A; join C X, and draw A Y parallel to C X; then X Y will be equal to the required C M; then draw M P perpendicular to the axis, and P will be the point where the tangent from T meets the curve.

E. W. T.

A PERMANENT CHEMICAL FILTER.

Your correspondent will find, I think, the following simple filter answer his purpose:—

If his cistern is *deep* in proportion to its *width*, an arrangement must be made, by which the filtering materials may be supported at about *two-fifths of the total height of the cistern from its base*. For this purpose I would suggest, that a strong plate of *zinc* (or of *iron*, *tinned*, or *galvanized*, either coating to be thicker than ordinary), pierced in the middle with a considerable number of holes,—say, ¼ inch in diameter, be made to rest upon metal or brickwork attached to the sides of the cistern. If the latter is a comparatively *shallow* one, the *bottom itself* had better be perforated, and a chamber for the reception of the *aqua pura* fitted below; but as your correspondent has not favoured me with particulars of any kind, I cannot tell what arrangement would answer *best* for *his especial case*, so I am forced to occupy more of your space, and encroach more upon my own time, and, possibly, *his* patience, than would otherwise be necessary.

* See p. 63, *ante*.

However, let the support be of *zinc*, *iron*, *slate*, or any other suitable material, and the formation of a filter is then simple enough: cover the plate for a couple of inches, with hard clean pebbles, just large enough to remain there without passing through the holes, and over this strew good, sharp *pit sand* (as little *ferruginous* as can be had), until the total thickness is six inches: the whole should then be moistened and pressed. Charcoal (about three inches) forms the next layer; it should be powdered, and sifted from all fine dust, the fragments, varying from the size of a hemp-seed, to that of a small pea, being *alone employed*: this, in its turn, must be covered by an equal thickness of fine sand and powdered *peroxide of manganese*, mixed in the proportion of three parts of sand to one of the oxide; a little pure sand being sprinkled on the top. To prevent the upper beds being disturbed by a strong current of water, some stones, or pebbles, must crown the whole.

This filter will last a lifetime: if the water is much impregnated with organic matter, the top layer of stones and sand may require changing after five or six years.

But few people know the value of commercial *manganese* as a purifier of water: it accomplishes what even *charcoal* does very imperfectly, namely, destroys all offensive matters *in solution*, as well as those *mechanically suspended*.

Mr. Lipscombe, if he wishes to make his filters *quite* perfect, would do well to try it. My late experiments have convinced me that Messrs. John Bozley White and Co.'s *Portland cement*, with a little *sharp sand*,* is the best that can be employed about a cistern: it appears to have a positive dislike to *lichens* and *confervæ*.

Wentworth L. Scott.

COST OF SITES IN LONDON.

From the great interest which you have taken in the improvement of the dwellings of the poor, and the able manner in which you have exposed their present lamentable condition, I feel assured you will admit into your columns observations on a subject most immediately connected with their improvement, and that is, the artificial state in which the metropolis is placed with reference to *sites* upon which such dwellings might be erected, and the extravagantly high prices which are demanded for them.

By a series of circumstances, which it is not necessary to review, three public bodies have become possessed of sites of great extent in three different localities,—in the east, west, and centre of London,—upon each of which suitable habitations ought to be erected for the occupation of the labouring classes. I refer to the Board of Works, which has a very large space of building ground in Whitechapel, Spitalfields, and other districts; to the Corporation of the City of London, who, in the vicinity of Farringdon-street, and the lower part of Saffron-hill, have cleared an extensive area; and to the Westminster Improvement Commissioners, in the neighbourhood of Victoria-street, who have, also, become possessed of a broad expanse of building ground.

Now, sir, what I wish to observe upon this fact, is this,—first, that these three public bodies have cleared away an almost incredible number of houses occupied by the labouring population; secondly, that they have provided no substitute for those demolished dwellings, and have never instituted an inquiry as to how or where the poor inmates have to find a home; thirdly, that the price they are now asking for building land in their separate districts amounts to an insurmountable obstruction to the erection of habitable dwellings for these classes.

The Board of Public Works, or, as they are more familiarly known, the Commissioners of Woods and

* Sand of an inferior and dirty character may be much improved by a few days' digestion in dilute sulphuric acid,—comm. o l of vitriol (at 1½d. per lb) 1 lb.; water, two to two and half gallons. This will do over and over again: the sand must be well washed afterwards.

Forests, are the trustees of Crown property, and they have had extensive spaces lying unoccupied for a period of ten or more years,—and they may lie waste for ten years longer before they will make any abatement. It would be well if these trustees of the public property would seriously consider the injury they are inflicting upon a numerous portion of her Majesty's subjects, and in this respect contrast their conduct with that of the Emperor of the French, who, by direct grants of sites or money, or both, is holding out every encouragement for the erection of dwellings for the labouring classes in Paris, Marseilles, Lyons, &c.

The Corporation of the City of London, in the year 1851, had, by a vote of the court, 42,500*l.* appropriated for the erection of model lodging-houses, but nothing has yet been done.

The Westminster Improvement Commissioners have great powers, both by an original Act and by an Act obtained in 1853 for the erection of dwellings for the industrial classes, but both Acts appear, as to this object, up to the present time, a dead letter.

PHILANTHROPOS.

METROPOLITAN BUILDING ACT, 1855.

BUILDER'S NEGLECT TO GIVE NOTICE OF WORKS TO DISTRICT SURVEYOR.

IN the case of Hesketh (district surveyor) *v.* Middleton, heard at the Southwark police-court on the 16th instant, it appeared that Middleton took a wooden building in Bermondsey-street, built before the Act came into operation, the east front being unenclosed. He up put an inclosure to this front with painted canvas on boarding. In the centre was a door, and two staircases within, leading to seats which rise one above another, sufficient to accommodate from 150 to 200 persons. Opposite the seats was a stage for the exhibition of "Marionettes." All these fittings were put in by Middleton since January 4, 1856. He had brought them in his van, and had put them up himself. He advertised performances by the "marionettes" in this theatre, and at least 100 persons were proved to have been present at one time. Payments were taken at the door.

The district surveyor summoned Middleton for not having given him notice of the works before commencing them (sec. 38), and sued for the penalty under sec. 41. He proved the above facts, and referred to sec. 3, "external wall," sec. 12, and first schedule, preliminary rules, 1, 2, &c. as requiring the vertical inclosure to be built under the rules of the Act, and to H. 3, "public building," secs. 22 and 30, as requiring the galleries, stairs, and passages to be subject to the rules of the Act, and erected with the approval of the district surveyor as to their safety. The works being subject to the Act, are, by sec. 31, placed under the district-surveyor's supervision, and notice is required to be given by the builder to him, under the 38th section; and Middleton had, by neglect, incurred the penalty under sec. 41.

The magistrate, Mr. A'Beckett, convicted him; but as the district surveyor did not press for a heavy penalty, on account of its being under a new Act, he was fined 1s. with costs, the magistrate saying that he would not be so leniently dealt with on any future occasion. The building will have to be altered.

WATERWORKS FOR HEANOR.

WATERWORKS are about being established at this place under the auspices of the Local Board of Health. Owing to the great scarcity of water in the neighbourhood—arising, partly from the town being situated on the summit of a hill, which rises more than 200 feet above the adjacent valley of the River Erewash, and partly from the constant and increasing abstraction of the water underneath by mining operations—the Local Board last year called to their assistance Mr. Norris, engineer, of Nottingham, who devised a scheme of "constant" water supply, which met with their approbation, and being submitted to the General Board of Health for their sanction, previously to a proposed mortgage of the rates of the district, also received the approval of that body, after an inquiry on the spot by one of their engineering inspectors. Mr. Norris's project in its main features, consists of a shaft to be sunk a sufficient depth (about 90 yards) to reach the water-bearing strata, at a point near the south-western extremity of the district; at the mouth of which will be fixed a 15-horse high-pressure steam engine, to raise the water by means of a lift and plunger pump, and force it into a covered service reservoir (capable of holding three days' consumption), situated on the highest point of Tag-hill. From this reservoir the water will be distributed through a 6-inch cast iron leading main, through the whole of the built portion of the district. The engineer's estimate for the construction of the works is 3,500*l.* nearly the whole of the contracts for which have recently been let; that for the main pipes (about 4½ miles), to Mr. Geo. Staley, of the Butterley Iron Works, and the others to Messrs. C. C. and A. Dennett, contractors and builders, of Nottingham. The works will be immediately commenced, and the invaluable boon of pure and potable water, to which the inhabitants have been so long strangers, will be dispensed throughout the district, it may be hoped, during the ensuing summer.

HANGING BELLS TO TURN IN THE STOCK.

WITH reference to Mr. Denison's plan illustrated in our last number, Mr. W. L. Baker, whose plan has been described in our pages, has sent us a communication urging that it was he who called attention to the destructive effect of the constant action of the clapper upon a single portion of the sound-bow, and first suggested that a bell should be cast in a way that would enable it to be turned round so as to present a new point of contact to the clapper without refitting or reconstructing any portion of the gear. Further, that his specification, after describing two ways in which his idea may be put into execution, points out that the object may also be attained "by casting an axis on the top of the crown." He says that "a bell hung upon one central bolt or axis, is capable of being moved round upon that axis with great ease, so as to present at intervals the whole of the internal surface of the sound-bow to the action of the clapper, and in a clock-tower bell the whole of the external surface of the sound-bow to the action of the hammer."

We avoided printing the comparison which Mr. Denison drew between Mr. Baker's plan and that which he thought his own, being anxious not to damage Mr. Baker's just claims.

GAS.

A LECTURE to working gasfitters and others, on science as connected with gasfitting, was delivered at the St. Martin's school-room, St. Martin's-lane, London, by Mr. Alexander Wright, on Thursday evening in last week. The lecture was well attended by the working classes of the Gasfitters' Institution, and by many gentlemen connected with gas-engineering.——At the opening of the West Ham Gas Works there were only 8 retorts: there are now 64 required to supply the increased demand for gas in that neighbourhood.——The inhabitants of Huntingdon have resolved not only to purchase the local gasworks for 4,250*l.* but also to raise 2,250*l.* to put the concern into an efficient state. Capital is to be raised in 650 shares of 10*l.* each.——The Chester Town-Council have under consideration a proposal for the amalgamation of the two gas companies, under an Act securing to the corporation power at a future period to purchase the plant and works; but in the meantime raising the maximum price from 4*s.* 6*d.* to 5*s.* and providing for subsequent reductions from surplus profits beyond 10 per cent. and a contingent-fund of 10 per cent. on the capital. The projected arrangement seems to resemble that at Liverpool, where the anticipated reductions year after year have been found to be downright humbug, 10 per cent. profits and reserve-funds notwithstanding.——The Birkenhead Commissioners have had a report from their committee on the complaints as to gas and water supply, in which they are recommended seriously to consider the propriety of taking both supplies into their own hands, negotiating, if possible, with the Gas and Water Company for the purchase of their works, or applying to Parliament for power to construct new works. The report has been adopted by the Commissioners.——A strike of the workmen at the Halifax Gas Company's works took place on Saturday before last. The cause was a threatened reduction of wages from 24*s.* 6*d.* to 23*s.* The men quitted without giving notice, and the manager had fifteen of them lodged in custody. He gives no previous notice himself, it appears, when dismissing his workmen.

TIME AND MATERIALS *versus* MEASUREMENT AND VALUE.

LAMPRELL *v.* COLLIER.—In this case the plaintiff is a builder, carrying on business in Long-lane, West Smithfield: the defendant is an auctioneer, carrying on business in Moorgate-street. In the year 1854, plaintiff executed general repairs to a dilapidated house belonging to the defendant, the nature of which was such, that no specification or contract could be made for them; and during their progress, Mr. Wright, a surveyor, was frequently on the premises, inspecting the works; and at the completion of the works, plaintiff handed his account of time and materials to the surveyor to peruse on behalf of defendant: this account amounted to £1,054 5s. Upon seeing this, the surveyor said he should measure the works, and make out a measurement account, which he did, making the amount 583*l.* 4s. 6d. and the defendant, upon being appealed to by plaintiff, refused to pay anything beyond the last-mentioned sum. Plaintiff then offered to refer the question to independent surveyors, but defendant refusing to do so, an action was brought in the Court of Queen's Bench for the amount of plaintiff's time and material bill, which, at the last summer assizes held at Croydon, was referred to Mr. Charnock, barrister.

At the reference before the arbitrator, the plaintiff proved, by his books and invoices, that he had paid out of pocket between 900*l.* and 1,000*l.* for the works, and that his charges to defendant were fair and reasonable. For the defence it was contended that, at the commencement of the works, a conversation took place between plaintiff, defendant, and Mr. Wright, at which plaintiff agreed to execute the works under the direction of the latter, and that, at their completion, he should certify the amount defendant should pay for them,—that the prices were fair, and if ever so unfair, plaintiff must be content with them. In reply, plaintiff denied the alleged conversation, and stated there had been no agreement that the works should be measured,—that during their progress no measurements were made,— that the surveyor did not attempt to measure them until after plaintiff delivered his time and material account,—and that when the surveyor did measure, most of the works were covered, and the house occupied: it was therefore impossible to measure them properly. Plaintiff also called the tradesmen who executed different branches of the works, and proved that their cost price was much more than the surveyor had allowed for them, including builder's profit.'

After an inquiry, extending over twenty-one meetings, the arbitrator has published his decision, awarding to plaintiff the full amount of his claim, the costs of the trial at Croydon, and the costs of the reference.

KENDALL *v.* KING.*

IN the report on the above-named case, in your publication of the 16th inst. what I (in common with Mr. Bellamy and Mr. Shaw), said before the arbitrator, illuminated as it is with three notes of admiration, is made to take a colour which does not belong to it. Whether Messrs. Kendall and Co. by entering into the competition on the terms proposed, committed themselves to the acceptance of 157*l.* 10s. as a full remuneration for "all services short of the actual erection of the buildings," is wholly extraneous to the real question, upon which my opinion was asked, and which is passed without notice in the report. That was, whether for the work and labour actually performed by Messrs. Kendall and Co. their charge of 1,048*l.* 15s. was or was not excessive. I thought it was. I beg leave to add, that I fully concur with the principle laid down by Mr. Tite—when it applies.

AMBROSE POYNTER.

BALL OF THE BUILDERS' BENEVOLENT INSTITUTION.

THE pleasant assemblage of the friends of this institution, at Willis's rooms, on the 14th February, has added about 120*l.* to the funds, and will serve to give comfort to those who need it.

Surely this is dancing to a good purpose. There were about 500 persons present, including Messrs. Charles Lucas, president, William Lee, M.P. John Lee, Charles Mayhew, Frederick Ashton, Barry, John Jay, J. Hunt, James Wagstaff, Dunnage, Sewell, Christopher Eales, Henry Dodd, Thomas Cozens (the founder of the institution), Joseph Bird, Soward, Collins, Stanbury (Birmingham), James Newson, jun. W. Norris, W. Hutchons, W. Ellis, Joseph Lambert, D. Nicholson, jun. Charles Formby, John Chapman, Stirling, William Todd, jun. &c. &c.

The whole affair was managed very well, and did credit to the committee.

Miscellanea.

ELECTRO-TELEGRAPHIC PROGRESS.—A telegraph to Australia is projected by the Mediterranean Electric Telegraph Company, who are at present engaged in uniting the European lines with Africa through Sardinia. The Australian project is an extension of the East Indian, already noted. The East Indian will comprise two great branches, the northern branching towards Cabul and Cashmere, while proceeding to Calcutta, and the southern passing along the Bengal coast, and by the Sunda islands to the north of Australia, whence it will coast southwards along the eastern side of the Australian continent to Port Adelaide. The entire length of the line is estimated by the Genoa *Corriere Mercantile* at 20,000 kilometres.

* The title of the firm should have stood in our report Kendall Pope (not Cope), and Edlin.

Great Fire at Clerkenwell.—On the 14th inst. a fire, originating in a large factory belonging to an ivory, brass, and wood turner, in Yardly-street, Exmouth-street, destroyed not only the factory itself, but also fourteen houses, extending right and left in the same and adjoining streets. This and some other recent fires, in which adjoining premises have suffered severely, should call attention to the dangerous and censurable mode pursued of stocking back-yards of houses with timber. Wooden buildings are prohibited by the Building Act, but our legislators have failed to discover any danger in permitting timber to be stacked, without let or hinderance, in any quantity. Some remedy should be devised.

Fire at Leeds Industrial School.—The south wing of this modern building was burnt on Saturday before last, by a fire originating between the joists and the flooring, both of the school-room and of the dormitory of the boys' department, and believed to have been caused by the overheating of a hot-air flue, with which the establishment is warmed.

Fire at a new Workhouse in Caithness.—At Halkirk, Caithness, a large workhouse is in course of erection, and was pretty far advanced towards completion, when a fire, it is believed, wilfully raised, completely gutted the walls of all woodwork on Friday before last. The supposed incendiary is an Irishman who had been employed as a labourer on the works, but was dismissed, and was known to have threatened to "make a poor-house of it before he was done with it." The scoundrel has been laid hold of, and according to the *John O'Groat's Journal*, the case is likely to be proved against him. The joiners' tools were all burnt, and many of the poor fellows will be heavy losers in consequence. The contractor for the building is Mr. Robert Johnson, of Edinburgh, builder, and the amount of the contract is 3,547*l*. The damage is variously estimated, but 1,800*l*. is said to be about the mark. It is feared that no insurance had been effected by the contractor.

The Iron Trade.—This trade has of late been very dull, and the demand for sheet and plate-iron in particular has much fallen off. Some large works are on short time, and prices have still a downward tendency, "underselling" being much complained of by those who regard it as their interest to raise prices rather than to lower them. The price of hot-blast pigs is reported to have fallen in the Yorkshire and Derbyshire districts from 7*s*. to 10*s*. a ton.——It appears from a paper on "The Mining Resources of France from 1841 to 1851," prepared by Mr. H. Reader Lack, of the Statistical Department of the Board of Trade, that Great Britain raises four times as much iron, and sixteen times as much coal, as France. The mineral productions of that country are, however, rapidly increasing. The production of coal, lignite, and anthracite, was, in 1841, of the value of 33,159,044 frs.; in 1852, 46,751,806 frs.;—iron and steel, in 1841, 141,789,500 frs.; and in 1852 it had increased to 297,330,748 frs.

Memoirs of Libraries.—The prospectus of a new and elaborate work on the history and economy of libraries, by Mr. Edward Edwards, of Manchester, has been issued. The work itself will be in two volumes, at a price not exceeding 24*s*. and will be published by Messrs. Black, of Edinburgh, probably in the course of the present year. The table of contents, and the researches of the author, in this particular department, afford assurance that this will be a work *per se*, and exhaustive of the subject.

The Meeting of the British Association.—The annual meeting of the British Association for the Advancement of Science has been fixed to be held at Cheltenham for this year, in the week commencing August 6th, and active preparations are being made in the county of Gloucester, in order to give a fitting reception to the members. Lord John Russell, who has lately taken up his residence in this county, aids the committee, and a subscription has been entered into to defray the necessary expenses.

New Health Act.—The Registrar-General having been applied to by several of the newly-appointed officers of health, for liberty to obtain information from the registrars essentially necessary for the due performance of their duties, has, in answer to their letters and those of registrars on the same subject, permitted the registrars to supply copies of their usual weekly returns to these gentlemen, but "does not wish the registrars to be subjected to the trouble of so doing without being properly remunerated."

Modern Lamps.—Very lately two huge gas-lamps have been attached on either side of the middle door of St. Philip's Church, Regent-street: surely some Irish hod-man must have suggested the design, as I cannot think that any architect or builder would place such outrageous specimens on any classic building. Perhaps the "parochial authorities" have bought them second-hand at the smash of some gin-palace in the New Cut or Wapping. Pray do your best to have proper ecclesiastical gaseliers substituted.

Gas.

The "Amateur Musical Society."—This amateur *Musical* Society being now considered by the world of London as one of the established musical societies of the metropolis, it will only remain for themselves to follow that course which will best carry out the objects for which it was originally founded, and at the same time insure a lasting duration. The addition of madrigals and part-songs by Mr. Leslie's choir may be made a feature and an advantage, if not overdone; but if the orchestral members—in number about eighty—have not more work assigned them than has lately been the case, the main object of their meeting—the practice of instrumental music—may be ultimately lost sight of. The fact is, the performance once a fortnight of a short and easy symphony and two light overtures and a march will hardly be an inducement to so many gentlemen to forego other engagements and assemble with their various instruments, some from considerable distances, at the Hanover-square Rooms. We observe that the best works please the audience the most, and the performance of the great symphonies of Beethoven, Mozart, Spohr, Mendelssohn, with the *best* overtures of Weber, Mozart, Cherubini, Rossini, and Auber, elicit far greater applause than the inferior compositions of the same or other masters;—not that we would advocate the performance of *great works* only;—variety is charming, and *toujours perdrix* not desirable; but let great works be the rule, and lighter ones the exception. *Au reste*, the *stuff* of which this orchestra of amateurs is composed may be fairly judged of by the number of capital solo-players that constantly emerge from its ranks, and the excellent precision and skill with which the music generally is performed. We wish the Society every success. Music and architecture are cognate.

Building-trade Strike at Paisley.—On Monday last, the slaters and bricklayers of Paisley turned out on strike for rise of wages. The bricklayers' demand is 3*l*. a-week—a rise of 1*l*. 10*s*., and the slaters are asking 1*l*. 13*s*.—a rise of 11*s*. Most of the masters have submitted to these terms. It is little to the credit of the workmen to take advantage of the present emergency, when they knew that owners of property, damaged by the late storm, must have it repaired at whatever cost; and it is nothing short of extortion for the bricklayers to be demanding 10*s*. per day.—*Glasgow Gazette*.

Strike of Masons at Witley Court.—The extensive improvements and alterations at Witley Court, which were proceeding rapidly and satisfactorily, have been interrupted by the strike of the stonemasons, some sixty in number, engaged thereon. They insist on working only nine instead of ten hours a day. The wages they receive are said to be very good, and Mr. Wood, the contractor, it is said, will not comply with their demand. It is thought not unlikely that the rest of the men, 250 in number, will also turn out.

Harmony of Theory and Practice in Mechanics.—Mr. Macquorn Rankine, C.E., on his appointment to the Chair of Civil Engineering in the University of Glasgow, delivered an introductory lecture on the above subject. The lecturer commenced by showing that in geometry, in poetry, in rhetoric, and in the fine arts, the Greeks are our masters, but that in physics and mechanics their notions were pervaded by a great fallacy—a double system of natural laws; and that this fallacy of a supposed discordance between rational and practical, celestial and terrestial machines, continued in force, and appears to have gathered strength and to have attained its full vigour during the middle ages. In the 15th, 16th, and 17th centuries, the system falsely termed Aristotelian was overthrown, and the truth began to be duly appreciated, that sound theory in physical science consists simply of facts, and the deduction of common sense from them reduced to a systematic form. The lecturer proceeded to show many evils which arise from ingenious and practical men not being acquainted with scientific principles, and how often time and money are expended in visionary inventions, particularly perpetual motion, of which two appeared in the last year's patent list.

Embank the Thames.—Upon the carrying out in a comprehensive form of this great national work depends the effectual cleansing and purity of the Thames. By embanking it, the mud banks will be got rid of, and the scour of the river increased, and so most effectually cleansed. Intercepting sewers will be but a very imperfect alleviation, as, when other sources of impurity are considered, and the great mass of human beings living on the river are also taken into account, it must ever be a means of carrying off sewage. If the intercepting scheme is to be carried out at such fearful cost to the ratepayers, and such a very problematical result, by all means preserve the sewage for the Thames marshes, and not keep it in a state of oscillation and suspension between Gravesend and Woolwich, by its being poured into the river at the latter point.

A Heavily Taxed Ratepayer.

Neglect of Work by Engineers.—At Bilston Petty Sessions, on Friday before last, Joseph Evans, an engineer employed at Messrs. Baldwin's works, was charged with having absented himself from his work on the preceding night. He was committed to prison for one month. Isaac Stokes, an engineer employed at the works of Mr. B. Gibbons, was charged with a similar offence. He was sent to gaol for fourteen days.

Statue of the late Mr. Baines.—The committee for erecting a statue of the late Mr. Edward Baines at Leeds, decided last week upon the statuettes sent in by Mr. Behnes and Mr. Noble. The former gentleman sent in one, an improvement upon that previously forwarded. The latter sent two—one an improvement on the original, the other new. The committee unanimously decided upon giving the commission to Mr. Behnes. The second prize of 30*l*. will, consequently, be paid to Mr. Noble. The statue is to be eight feet high, and to stand upon a pedestal of Sicilian marble. The committee, according to the *Leeds Intelligencer*, have now selected a site, at the east side of the vestibule of the Town Hall, to cost 700 guineas.

Bath Graphic Society.—This successful society gave the second of their *conversazioni* on Tuesday evening before last. In the octagon room, the centre of which was occupied by lounges, were arranged portfolios of sketches. The long room, furnished with chairs and couches, was lined with paintings and drawings two or three deep. The third large room was devoted to refreshments.

The Excavations at Fountains Abbey.—Lord De Grey has recently recommenced his winter's excavations at Fountains Abbey. The excavators commenced operations in the base story of the Fraterhouse. Part of the floor yet remains; and amongst the rubbish some early English capitals, of the finest Nidderdale marble yet discovered, have just turned up. The great kitchen, refectory, buttery, and cloister-court will next be exposed.

Fall of a Bridge and Loss of Life.—On Wednesday last, two arches of a railway bridge in course of construction over the river Doon, in Ayrshire, suddenly fell to the ground, burying two men in the ruins. They were got out as quickly as possible, but died in a very short time. The catastrophe is attributed to the heavy rains following the severe frosts, and softening the lime.

Marsden's "Patent Artery and Vein System" of Ventilation.—Mr. Marsden's mode of ventilating sewers, public or other buildings, mines, tunnels, &c. consists of the action of a series of small "vein" pipes, as he calls them, concentrating from various parts of the cavity, chamber, or locality to be ventilated, into one air-tight and trapped receiver, communicating with what he calls an "artery;" but which, by parity of similitude, he ought, in fact, to call a great vein, the whole system being venous or concentrating and withdrawing, and not arterial or radiating and distributive, so far at least as regards the withdrawal of foul air through his ventilating pipes. These "arteries," or larger vein pipes, in turn convey the noxious gases collected by the smaller vein pipes onwards, either to a trunk vein or directly to a main-receiver, trapped, and leading them into an extracting shaft with fan, which, in the ventilation of sewers or mines, not only generates the suction power (worked by steam-engine or water power), whereby the gases are withdrawn, but also hands them up to furnaces prepared in a main shaft for their combustion. What Mr. Marsden appears more especially to claim, is the idea of ventilation from various points by a concentration of "vein" pipes, at once separating and enclosing the gases while conveying them away to trapped receivers and main-pipe conductors, to be expelled and consumed by modes already suggested and indeed already realized. The reverse process or distribution of pure air to mines, &c.—a true *arterial* system,—may be carried out through the same system of pipes and fans, &c.

Construction of Flues.—As things of utility, as well as of taste, are noticed in the *Builder*, I need not apologize for calling your attention to the flues laid in Messrs. Berens, Blumberg, and Co.'s buildings, Cannon-street, under my superintendence as clerk of the works, by direction of Mr. Husking. The horizontal flues, 220 feet in length (from Hayden's warming apparatus), are all 9-inch patent drain-pipes, laid in brick chambers, with concrete bottoms and slate tops. The saddle-pieces in connection with these pipes, at convenient distances, are only loosely bedded, and afford every facility for sweeping at stated periods. These pipes have been in use fifteen months, and are so satisfactory that I have instructions to carry out the same plan in the next buildings. It has occurred to me, that for church flues running underground, or for flues round hot-houses, these pipes would be most economical, and the saddle-pieces would afford every facility for sweeping.—W. L.

THE HARDWARE AND METAL TRADES' PENSION SOCIETY.—On Tuesday last, a concert, headed instrumentally by Fraülein Gräves and Sainton, and by Miss Dolby and Mr. Wilbye Cooper, vocally, was given at the Hanover-square Rooms, in aid of the funds of the Iron, Hardware, and Metal Trades' Pension Society, and was exceedingly well attended. We were to this time somewhat in ignorance of the progress of this association; but under the management of the committee who so well organized Tuesday night's concert, it ought to be prosperous.

ARCHITECTS' "CLERKS."—A gentleman who has a somewhat exalted idea of his distinguished position as "*only* managing assistant to an architect and engineer of high standing," is extremely indignant that he should be termed a "clerk." It is, he says, highly aggravating to him to be so designated. He has looked out the term—at least he says so—in Johnson's Dictionary, and finds it to mean a bookkeeper or accountant. I am afraid your correspondent has not referred to a good edition of Johnson. If he will do so, he will find among others, the following meanings of the word "clerk:"—1. A clergyman. 2. A man of learning and letters. 3. A person who is employed in writing for another. 4. An officer of various boards; but not a bookkeeper or accountant. If he had been aware that the original meaning of clerk was a man of learning; that it is the proper designation of a clergyman; that the principal law officer of a city or borough is termed the city or town clerk; that the principal officer of many corporations is termed the clerk; and that the clerks in the Courts of Chancery and Houses of Parliament—not to mention hundreds of other clerks—are gentlemen who would scarcely consider the position of an architect's "assistant" equal to their own, he would, perhaps, feel less aggravated by the designation. Your correspondent states his desire that we should "call a spoon a spoon," and almost tempts one to be guilty of the rudeness by manifesting so much anxiety to enhance the dignity of his position by borrowing from the linen-draper's "assistant" his usual denomination.—AN ACCOUNTANT.

DWELLINGS OF THE POOR NEAR SWINDON.—A correspondent, who takes an active and official interest in the sanitary welfare of Swindon, sends us a painful account of a visit paid to some agricultural cottages in that neighbourhood,—"dens," he remarks, "equal to the vile ones so ably set forth in your excellent book of 'London Shadows.'" And that such dens do exist, alas! in but too many localities besides London, it required no special detail to assure us. "Inquiring for the house," continues our correspondent, in reference to one of the dwellings referred to, "an inhabitant of the swampy lane told us, '*You must go on till you come to a gurt and nasty pond, and the house is close to't.*' It was close—four feet only from the '*nasty pond*,' which afforded the only water they had to use, and was further the receptacle for all the privy soil and sewage of the lane when rain came to flush the ditches." In this hopeless abode, as might well be anticipated, there lay the head of a family of ten children, in the "prime of life," but on the brink of the grave. Neither he, nor his wife, nor his little ones, had tasted food for four and twenty hours. It is probable that, ere long, the parish will have what is left of his family to provide for. Would it not have been a decided saving had they provided for the removal of the "gurt and nasty pond," and thus have conferred the boon of health and life upon the miserable head of such a family, and so have enabled him to provide for them himself?

HILLOTYPE.—The *Rondout* (U.S.) *Courier* says,—after years of untiring application and almost unexampled perseverance, the hopes of our townsman, the Rev. L. L. Hill, are crowned with success, and he is about to realise a reward for his toil. He has already received an offer of 30,000 dollars for the Hillotype. A great addition recently made to the invention consists in reproducing the colours of nature on collodionised glass. This revolution will extend to portrait and landscape painting, as Mr. Hill is able to copy pictures of any size, and to produce any number of copies from one original. The Hillotype consists in taking all the natural colours by a single process—every tint of countenance, and every shade of dress, and even the precise colour of the eye, being transformed to the picture.

THE BIRMINGHAM GLASS CUTTERS' SOCIETY.—The assistance afforded by the "United Flint Glass Cutters' Society" of Birmingham to its needy members is worthy of imitation by similar societies. The last yearly balance sheet of the society states that about 150 men received weekly assistance from the society's funds for a considerable period in course of the year, and that the amount distributed was nearly 2,000*l.*, while 1,600*l.* remained in hand. It is to the working of such societies as this that Birmingham, according to the local *Journal*, in some measure owes its immunity from strikes.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED the Establishment on the Surrey side of the Thames, and that articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Fried-street, Paddington.

BATH, PORTLAND, and ROMAN CEMENTS GROUND and LUMP HYDRAULIC BLUE LIAS LIME.

The LONDON and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being excavated in its pure and unadulterated state, from quarries on their own property. The Company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or shipped from their wharf, direct to all parts.—Agents required, and a liberal discount allowed. Orders received by Mr. KIALLMARK, 80, Old Broad-street, City, or by RICHARD WINTER, Cement Works, Dunball, Bridgewater.

BATH CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

PORTLAND CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cements; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 8, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment on advantageous terms.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted on within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON,
BRICK, LIME, and CEMENT MERCHANTS,
SOUTHAM BLUE LIAS LIME DEPOT.

Bath, Portland, Lias, and Roman Cements; Parian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewage Pipes, Fire Goods, Vitrified Blue Bricks, White Building Bricks, White Enamelled Pans and Traps, and every description of Building Mater al.

N.B. Lump and Ground BLUE LIAS LIME delivered in boat-loads direct from the Works in Warwickshire, to any part of the river or canal

SOUTHAM BLUE LIAS LIME DEPOT,
No. 14 SOUTH WHARF, PADDINGTON.

TATHAM & CO. have arranged for a constant supply of the above very superior BLUE LIAS LIME, which for the last two years has been extensively used at most of the large works constructed during that period or now in hand, and orders they are favoured with will command their best attention.

Boatloads of either Lump or Ground Lime can be delivered direct from the Works in WARWICKSHIRE to any part of the Rivers Thames or Lee, alongside any wharf on canal, or by boat or rail to any part of the kingdom.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders addressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention.

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extremes of heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application to their Office, adjoining the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwater, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Acc ur of COMPARATIVE EXPERIMENTS on the strength of this and other Cements used at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank street, Westminster, who prepare one quality only of Portland Cement.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be altogether avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BOORMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their contiguity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confidently hope they shall be able to supply the public with a first-rate article, in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be affixed to the head of each cask. Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.

Agents in London:—Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

TO BUILDERS, CONTRACTORS, SHIPPERS, and Others.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland-yard, Westminster.
DAVIES and NORMAN, Agents.
Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.
IN EVERY VARIETY.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

NOTICE.—BLUE LIAS LIME.—L. B. PEARSE and CO. beg to inform Architects, Engineers, Builders, and Contractors generally, that they have now accepted the AGENCY for the above valuable HYDRAULIC LIME, from the original quarries, Stockton, Warwickshire, and are now supplying direct from the works in their own boats, at a reduced rate.

L. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large buildings and machinery for grinding lime and cement, so as to insure genuine quality and large supply, at their extensive premises, situate on the Great Northern Railway, York-road, King's-cross.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.

Small ditto, ditto, 4d. per ton.

Barges loaded in a few minutes.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London. March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GIBBS, CANNING, and CO.'S BLUE VITRIFIED BRICKS, PIPES, JUNCTIONS, BENDS, and FIRE GOODS.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

GREAVES'S BLUE LIAS LIME.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

NOTICE.

SOUTHAM HYDRAULIC BLUE LIAS LIME.

WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump, into boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime, and Cement Works, Southam.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, pickings, rough stocks, place, red kiln bricks, paviors, &c. &c. on low terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it. Also, flints for building boundary walls, stables, cottages, &c. by using which one-third of the expense may be saved. Also, lime, chalk, chalk rubbish, gravel, loam for foundries, &c. &c. Whiting of the best quality, lime, both white and flare, bricks fire-goods, &c. can be obtained at Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders, by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

DOVERCOURT CEMENT WORKS, HARWICH, ESSEX.

JOHN PATTRICK being now the only ROMAN CEMENT Manufacturer at Harwich, hereby informs the public that he continues to carry on a WHOLESALE business, and offers to Contractors, Builders, &c. by the freight or half freight, ROMAN CEMENT of best quality upon advantageous terms. Application either at Harwich or to his Agents, GEORGE MORRIS, 20, New Ormond-street, Queen-square, London.

REMOVED FROM CRITCHILL-PLACE, NEW NORTH-ROAD, HOXTON.

(Within a short distance of the five bridges).
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere road, Lambeth.

WHITE SUFFOLK and RED FACING BRICKS
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE, 5, ADELAIDE-PLACE, London bridge.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings of good and sound quality, constantly on sale at H. DODD'S Brick-fields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting house, Hoxton Brick-fields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable for Yer sgnd.

WHITE SUFFOLK PERFORATED BRICKS.—Messrs. J. EASTWOOD and SONS take this opportunity of informing their customers and the trade, that they have made arrangements for the Manufacture of White Suffolk Perforated Bricks. In ouring defects common to bricks of this description, care has been bestowed to produce them of a true and perfect shape, of an even and beautiful surface, and free from fire-flaws.—J. EASTWOOD and SONS, Belvedere-road, Lambeth.

TO BUILDERS AND CONTRACTORS.

RISBRIDGE NEW UNION WORKHOUSE.—GOOD BRICK EARTH can be had within a short distance of the site, on reasonable terms.—Apply to Mr. THOS. FROST, Wratting Wash, Haverhill.
February 18, 1856.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boys to remove the bricks. For a plate and description, see "Practical Mechanic's Journal," for January 1st, 1856.—Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

TO BUILDERS and OTHERS.—BRICKS delivered to any part of the River up to Battersea-bridge, at the following prices, viz.—Grey Stocks, 25s. per thousand; Grizzles, 20s. per thousand; Rough Stocks, 20s. Place, 18s.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide place, London-bridge.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES either old or new, whether of thatch, slate, or tile, and other structures. Sole agent, J. B. LAWES, 1, Adelaide-place, London-bridge. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-round for the reception of cement, a solid and complete gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses by cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Yelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 87, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REMARKS OF THE JURIES," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Fileries," Tunstall, Staffordshire, as the first of the kind in the world.

MANDER, BROTHERS,

VARNISH MANUFACTURERS,

WOLVERHAMPTON,

And 37, UPPER BAKER-STREET, LONDON.

MANDER, BROTHERS, have to announce to their Friends and the Trade, that in consequence of the increase of their London Trade, and to accommodate their Customers, they have taken the Premises,

SPECIAL NOTICE

The Books of the Society close on the 31st of March, and Proposals lodged at the Head Office, or at any of the Agencies, on or before that day, will secure the advantage of the present year's entry, and of One Year's additional Bonus over those effected after that date.

MUTUAL LIFE ASSURANCE.

The Whole Profits divided amongst the Assured.

THE SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY. Instituted 1831. Incorporated by Special Act of Parliament.

The Capital belonging to the Society from the contributions of members, exceeds NINE HUNDRED THOUSAND POUNDS

The Annual Revenue exceeds ONE HUNDRED and SIXTY-THREE THOUSAND POUNDS

The amount of existing assurances exceeds FOUR MILLIONS and a QUARTER STERLING

The amount of the separate funds of deceased members exceeds SIX HUNDRED and FIFTY THOUSAND POUNDS, of which SEVENTY-EIGHT THOUSAND POUNDS are Bonus additions.

THE NEXT DIVISION of PROFITS TAKES PLACE at the 1st of MARCH, 1856, and policies effected before that date receive one year's additional bonus over those effected after that date.

ROBERT CHRISTIE, Manager.

WILLIAM PINLAY, Secretary.

Head Office—26 St. Andrew-square, Edinburgh

London Office—196, Bishopsgate-street, corner of Cornhill.

W. H. SMALRIDGE, Interim Agent

SPECIAL NOTICE

KENT MUTUAL ASSURANCE SOCIETIES.

CHIEF OFFICE:

QUEEN-STREET-PLACE, NEW CANNON-STREET, LONDON.

The united annual incomes exceed £7,000l.; and all Profits belong to the Assured.

LIFE.

The next division of Profits will include parties assuring before the 24th March next.

The new business of the last eight months exceeds 5,000l. in Annual Premiums.

FIRE

The Guarantee Fund is being increased to Half-a-Million.

The annual income, since last annual meeting, has increased beyond 5,000l.

GEORGE CUMMING, Manager.

N.B. Agents are still wanted for some vacant localities.

SIXTH BONUS.

UNION ASSURANCE SOCIETY.—(FIRE—LIFE—ANNUITIES)

Instituted in the reign of Queen Anne, A.D. 1714.

Cornhill, and 70, Baker-street, London.

Chairman—J. Remington Mills, esq.

Deputy-Chairman—Henry Alfred Soames, esq.

James Bentley, esq.	J. Jun Paynter, esq.
Thomas Budley, esq.	John Rogers, esq.
Daniel Burton, esq.	Henry Ruth, esq.
Nicholas Charrington, esq.	George Spencer Smith, esq.
P. Pearce Cuttle, esq.	Richd Hartman Solly, esq.
William Galpin, esq.	W. Foster White esq.
Thomas Mills, esq. M.P.	Samuel Wilson, esq. Ald.
John Mills, esq.	Stephen Wilson, esq.

The LIFE BONUS of the year 1856, of four fifths of the profits of the LIFE DEPARTMENT, has been just declared, and (with the exception of a reserve of nearly 10,000l to accumulate towards the next Bonus of 1859) is payable upon and with the sum assured, being at the rate of 10l. 10s. per cent. for the last seven years, on Policies effected in Great Britain upon the Profit System

THIS BONUS MAY BE APPLIED EITHER

By having the annual premium reduced for the next seven years, which will in many cases extinguish the same for that period,

Or by adding the amount to the sum insured;

Or the value thereof may be received immediately in money.

The Directors beg to state that, by a recent clause in the regulations of this Society, the assured realise the advantages of MUTUAL OFFICES by sharing the entire profits less one-fifth as a small compensation for the necessary guarantee, and are free from the liability incurred by the members of such Societies

The accumulated invested capital now amounts to upwards of ONE MILLION sterling.

Prospectuses and full particulars may be had at the Offices, 24, Guildford-street, Russell-square

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, for beauty and brilliancy of surface, and is unaffected by sulphurous or any other vapours or exhalations. Being completely unobjectionable and free from the poisonous effects of the lead, it may be used in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any serious compounds that might be sold as cheap rates as Pure White Zinc. If any alteration has taken place in the colour, or in the consistency, after the paint has been mixed and ground, to produce it, an imperfect mode of production, that is, one in which the oxide contains substances calculated to give it more than its proper weight, it then produces a very inferior body of paint, and a very poor paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, ground in oil, are sold with the VM mark in Ball by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Whose sole Agents, 63, King William-street, City; and by the Manufacturing and Painting Agent, Mr. FREDK. BRABY, Fitzroy Works, Newroad, in Manchester and Liverpool by S. CLAY, Mersey-road, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21 and 28lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Perth and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with the Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to M. H. BLANCHARD, late of Coade's Original Works, and successor to them in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, to the adornment of our noblest buildings, and in the non-red and non-fading qualities of which the ravages of time unimpaired. Groups, statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition. A large Stock of newly-designed Chimney-shafts and Pots to suit the various styles of buildings, at very low prices, and worthy of notice

BLASHFIELD'S PATENT TERRA-COTTA, Manufactured at Mill-wall, Isle of Dogs. Can also Consoles, Tracery for Parapets, Balusters, String Courses, Friezes, Rosettes, Vases, Mottoes, Chimney-shafts, and all other architectural ornaments modelled, finished, and burnt in the best manner, and warranted to stand heat and frost, either in Buff or Red coloured Terra-cotta. A great variety and large stock may be seen at BLASHFIELDS' Warehouse and Show rooms, No. 1, Praed-street, Paddington.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is DIXON'S WHOLESALE WAREHOUSE 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom. THIRTY PER CENT CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

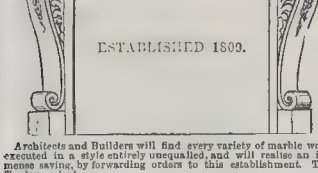
TO BUILDERS, MARBLE MASONS, AND OTHERS.

THE LIZARD SERPENTINE COMPANY have to acquaint the public, that the Serpentine Chimney-pieces and other articles, recently sold by public auction in London, were not the produce of any of the Quarries belonging to the LIZARD SERPENTINE COMPANY, which continues successfully to carry on its business in Slab and Manufactured Goods, in stone of very superior quality and in great variety of colour, at the Factory, Poltesco, Lizard. Show-rooms, 20, Surrey-street, Strand.

HENRY COX, Manager, Poltesco, Lizard.
F. W. RUFFLE, Agent in London.

ITALIAN and GALWAY MARBLE QUARRIES. Depôt, WHITEHALL WHARF, Parliament-street, Westminster.—Mr. FRANKLIN begs to invite the Sculptors, Marble Masons, Builders, &c. to inspect his extensive STOCK of Italian, Irish, and foreign MARBLES, which he is constantly importing in blocks and slabs, consisting of upwards of twenty different varieties, which he is enabled to offer at very reduced rates. Several large blocks of statuary, suitable for sculpture, &c. now landing.

Lloyd's Marble Wharf, Thames-bank, Pimlico,
Adjoining Vauxhall-bridge.



ITALIAN STATUARY, veined, Sicilian, dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharf at all hours.

MARBLE.—The Italian Marble Company, Importers of the produce of their many quarries in the province of Massa Carrara, Italy, beg to inform the general marble trade in the United Kingdom that they are prepared to undertake Contracts for any quantity of Statuary, Veined, Sicilian, Bardilla, Dove, and other Marbles, in blocks of all dimensions, delivered on shipboard at Lechorn, or in dock, London. A constant stock is always kept at the London Depôt. Orders for Paving Slabs, Garden and Hall Statues, Vases, Tazzas, Consoles, &c. executed and delivered at reasonable rates.—For further particulars apply at the Offices of the Company, 18, Cannon-street, City.
WILLIAM W. BONNIN, London Secretary.

TO SCULPTORS BUILDERS, MASONS, &c.

B. FABBRICOTTI respectfully invites the Gentlemen connected with the Marble Trade to inspect his fresh STOCK, composed of statuary, vein, Sicilian, black and gold, dove, Bardilla, Sienna, and Breccia, in blocks and particularly calls their attention to a large quantity of his best statuary, sixty blocks, of all sizes, just landed.
Monuments, vases, and statues, finely executed in Italy.
Carrara Wharf, Thames-bank, Pimlico.

SCULPTURED STATUARY MARBLE CHIMNEY-PIECES, in great variety, on view at the Westminster Marble Company's Works, Earl-street, Millbank.

Architects and Builders will find every variety of marble work executed in a style entirely unequalled, and will realise an immense saving, by forwarding orders to this establishment. The Trade supplied.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.
THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS,
QUARRYMEN AND STONE-MERCHANTS,
BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

ANCASTER STONE, so remarkable for its free working quality, combined with colour and durability. Price, and cost of transit to any part, may be obtained, up on application at Mr. W. THOMPSON'S Office, Elmer-street, Grantham.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rowlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

GRANITE.—King William and Nelson Monuments. Plinth and steps of the Royal Exchange, and Terraces at the Crystal Palace, supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

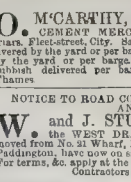
GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard
This Granite is selected for the New Westminster-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to

FOR MACADAMIZING ROADS.—The HARDEST and most DURABLE STONE.—The Proprietor of an extensive Quarry at Duncannon Rock, containing Blue Elvin Granite, is open to contract for to supply any quantity of the above Stone, its durability having been tested, and proved to be 25 per cent. harder than Guernsey Granite. For further particulars apply by letter to Mr. JOHN NEWTON, Norway-wharf, Hertford-road, Kingsland-basin.—Two Coal Waggons for Sale.

SLATE CISTERNS, SINKS, and every description of SLAB-WORK, in Slate, Roofing Slates, or Covering. T. B. HANNAFORD is not only in a position to execute orders to any amount in the above, at extremely low prices, but guarantees a first-class material in all respects, similar to the slabs now used in fitting up and covering the principal mercantile and Governmental buildings in the City. A priced list sent on application. TREVALGA WHARF, Ratcliff-cross.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.



PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of lob tables, chiffoniers, consoles, &c.; baths baptistries, altar-tab.ets, pulsters, columns vases pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad

TO CONTRACTORS, BUILDERS, &c.—EIGHTY AXE-DRESSED GRANITE BLOCKS TO BE SOLD a bargain. They are worked all round, and the beds made and taken to a height. The lengths are 3 feet 3 inches and 2 feet 7 inches, 1 foot 11 inches wide, and 1 foot 9 inches high. To be seen at the South Devon Wharf, Lower East Smithfield. Price and particulars can be had by applying, by letter only, to B. R. PENTON, Post-office, Lupus-street, Pimlico.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations.
PER SQUARE YARD.
Country Buyers supplied with Asphalte for footings and barn floors, with instructions for using it.
Apply to JOHN PILKINGTON, Polyteucan and Limmer Asphalte Mine Monument Chambers, 14, Fish-street-hill, London.
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

O. McCARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames

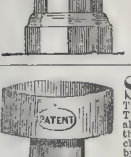
Contractors supplied to any extent.



H. DOULTON & CO'S.
TERRA-COTTA CHIMNEY-TOPS
Will withstand the action of the Weather and Sea Breezes, and are
QUITE IMPERISHABLE.
Prices not much higher than Cement.
DOULTON & CO.'S
TERRA-COTTA POTS, &c.
Erected in London upwards of 20 years since, are now as sharp and perfect as when first manufactured
Drawings on application to
H. DOULTON & CO. High street, Lambeth.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUPER'S PATENT WIND-GUARD.—This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at his Office, 85, Fenchurch-street, London.

By Her Majesty's Royal Letters Patent.

DUPREE and CO.'S DEFIANCE WIND GUARD and VENTILATORS, &c. for the perfect cure of Down draft Smoky Chimneys, suitable for Public and Private Buildings requiring a constant change of air.
Also
SHIP VENTILATORS, requiring no attention, imparting about six times the quantity of fresh air than any other in use.
Also,
VENTILATING SKYLIGHTS, for Slate or Tile Roofing, without Paint or Putty.
Prospectuses sent on application.
London Depôt ESNOUF and MANGER, 141, Minories, City.

NEW PATENT SMOKE PREVENTER.—The Rev. James Burrow, of Ashford Parsonage, Bakewell, has appointed WILLIAM S. BURTON, of 39, Oxford-street, sole Metropolitan Agent for the sale of his SMOKE PREVENTERS. They have been used under many varied circumstances with great and uniform success. They are very simple, and not liable to get out of order. Price 10s. 6d. 12s. 6d. and 15s. each.
The alterations and additions to these extensive premises already by far the largest in Europe, which occupied the whole of last year, are of such a character that the entire of EIGHT HOUSES is devoted to the display of the most magnificent stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver, Plated Goods, Baths, Brushes, and Turnery, Lamps and Gasoliers, Iron and Brass Bedsteads and Beddings), so arranged in Sixteen Large Show Rooms as to afford to parties furnishing facilities in the selection of goods that cannot be hoped for elsewhere.
Illustrated Catalogues sent (per post) free.
39, OXFORD-STREET; 1, 1A, 2, and 3, NEWMAN-STREET; and 4, 5, and 6, PERRY'S-PLACE. Established 1820.

HANDS'S PATENT ECONOMISING KILN is the only simple and effectual mode to use the Leaf, for drying moist moulded clays, sound at any season, in time of burning and cooling the kiln, with perfect ventilation.—Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

TO THE COMMISSIONERS OF THE BOARD OF HEALTH, AND TO ALL PERSONS INTERESTED IN THE SMOKE QUESTION.
HANDS'S PATENT is the only simple and certain remedy for the SMOKE NUISANCE: it has combined, where necessary, the advantages of a drying process and perfect ventilation, without a particle of complicated machinery. Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

THE PERMANENT WAY COMPANY, 36, Great George-street, Westminster, have now published a Second Edition of their CIRCULAR, which may be had post-free upon application. Among other recent important inventions, the Company beg to call particular attention to Prime's Patent for Uniting Railway Chairs, Polk's Patent Improved Fish Joint, and Dr. Boucherie's Improved Process for Preserving Sleepers, Fencing, Telegraph Posts, &c. from decay.—Every information may be had upon application to CHARLES MAY, F.R.S. the Manager; or to WILLIAM HOWDEN, Secretary.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s. per foot super, together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 86, New Bond-street.

ROYAL POLYTECHNIC.—Next Monday Evening Lecture on the 25th, at 8, by the Rev. A. Bath Power, A.M., on Form, in relation to Mechanical Structure. During Lent, Mr. Pepper will lecture on Elementary Astronomy, illustrated with magnificent Dissolving Diagrams, and appropriate Music from Haydn and Handel, every Wednesday and Friday mornings at 2, evenings at 8.
NOTICE! Alteration of Hours. During the Astronomical Lectures, Mr. Pepper's Lecture on the Poison Strychnine will be given only on Monday and Saturday mornings at 2; and Tuesday and Thursday, at 4 and 8. Mr. F. Lennox Horne's serio-Comic Music at Lecture at 8, and the much-admired War Views at 9.30, on Monday, Tuesday, and Saturday. Cuba. Wednesday and Friday, at 4 and 9, and Tuesday, Thursday, and Saturday mornings, at 2.

JAMES BURTON & SONS, Engineers and Contractors, John's-place, Holland-street, Southwark, London.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

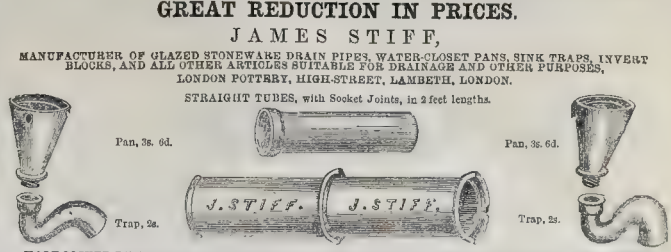
PUMPING and WINDING ENGINE.—TO BE LET on HIRE, or for SALE, a nearly new strong and simple PUMPING and WINDING STEAM ENGINE, of 10-horse power, by Medwin and Hall, with a pair of 10-inch pumps and all the driving gear complete. The contractor for whom it was fitted up will make a considerable sacrifice on the cost price, or let the whole on hire.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, 92, Blackfriars-road.

STEAM-ENGINES for SALE.—A Six and a Ten horse High-pressure. Also, a Donkey Engine.—Apply to JOHN DUFF and CO. Engineers, Glasgow, Makers of Land and Marine Engines, Boilers, Derrick and other Cranes, &c.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT, —Second Testimonial.—"March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years; and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.



GREAT REDUCTION IN PRICES.

JAMES STIFF,

MANUFACTURER OF GLAZED STONEWARE DRAIN PIPES, WATER-CLOSET PANS, SINK TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE AND OTHER PURPOSES,

LONDON POTTERY, HIGH-STREET, LAMBETH, LONDON.

STRAIGHT TUBES, with Socket Joints, in 2 feet lengths.

HALF-SOCKET PIPES same prices as whole Sockets, by the use of which, Drains may be readily examined, and Junctions INSERTED, IN THE EVENT OF REQUIRING FURTHER CONNECTIONS.

Drawings, with Prices, will be forwarded free, on application.

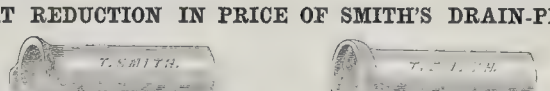
WILLIAM INGHAM AND SONS,

WORTLEY FIRE-BRICK, GAS RETORT, SANITARY PIPE, AND TERRA-COTTA WORKS, NEAR LEEDS, YORKSHIRE,

Manufacturers of Glazed Sanitary and Water Pipes, from 2 to 36 inches diameter; Invert Blocks for Sewer Bottoms, Closet-pans, Fire-clay Gas Retorts, Fire Bricks, Chimney Tops, Crucibles, and a variety of Articles in Terra-cotta.

N.B. Superior Fire-clay, for Glass-house Pots and Crucibles.

London Agents—Messrs. CHADWICK and AKEROYD, Willington Stone-wharf, Regent's park Basin.



Manchester Agent—Mr. TODD CARR, Arch 14, Birmingham-street, London-road Station.

Burnley Agent—Mr. JAMES SAGAR, Canal Wharf.

Leeds Stores—Albion-place, Albion-street.

W. I. & SONS beg to inform Architects, Engineers, Contractors, Iron Masters, Builders, &c. that the whole of the above-named Articles are manufactured from the celebrated Wortley Fire-clay, and they (having worked the same for upwards of thirty years) can furnish first-class references.

GREAT REDUCTION IN PRICE OF SMITH'S DRAIN-PIPES.

THOMAS SMITH begs respectfully to call the attention of Contractors, Builders, &c. to the GREAT REDUCTION in his PRICES of GLAZED STONEWARE DRAIN-PIPES, &c.

T. S. is the Original Manufacturer of the CONED or REBATED SOCKET-PIPES, and the Medium-backed Closet-pans (with superior White Enamel Glaze inside), as made under the direction of Mr. JAMES PILBROW, Engineer to the Tottenham Local Board of Health, with which he is now supplying several large towns.

N.B. Half socket Pipes same prices, which obviate all difficulty arising AT ANY TIME from the Inspection of Pipes in the event of a Stoppage occurring, or a Junction being required to be inserted.

DRAWINGS AND LISTS OF PRICES FORWARDED FREE ON APPLICATION.

MANUFACTORIES,—71 and 72, PRINCES-STREET, LAMBETH; and ALBION POTTERY, OLD FORD, BOW.

MR. M. B. NEWTON,

Late MANAGER and CORRESPONDENT to the FARNLEY IRON COMPANY'S FIRE-CLAY and TERRA-COTTA WORKS, having relinquished the above engagement, respectfully intimates to his Friends that he has OPENED

THE WHARF No. 4, KING'S CROSS GOODS STATION, LONDON, as a DEPOT for GLAZED SANITARY TUBES, FIRE-BRICKS, CLAY RETORTS, and OTHER GOODS, MANUFACTURED BY

JOSEPH CLIFF, WORTLEY, NEAR LEEDS.

N.B.—PRICE LISTS having just undergone a revision, Parties will meet with the most liberal Terms at this Wharf.

(Further Advertisement next week.)

TO ENGINEERS, MACHINE MAKERS, AND OTHERS.

CHARLES MACINTOSH and CO. Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER in all degrees of elasticity, recommend this material as capable of sustaining the action of hot or cold water, gas, steam, acids, and grease. It is used extensively for valves in marine and land engines, railway buffers and springs, washers for pipe-joints, hose and tubing; also for gas-holders, acid pumps, alkali cisterns, &c. &c. Articles, moulded or otherwise, made to any size or figure.—Address, 3, Cannon-street West, London; and Cambridge-street, Manchester.

TO ENGINEERS, MILL-OWNERS, &c.

N. Woolwich Elastic Steam-packing (Canvas and India-rubber), at 1s. 4½ per lb

S. W. SILVER and CO. INDIA-RUBBER WORKS, North Woolwich (opposite H. M.'s Dockyards), having considerably extended their manufacture in order to meet the daily increasing demand upon them for this effective and durable article, are enabled to offer the very best material at the reduced price of 1s. 4d. per lb. for sheet and rope.

Testimonials may be seen at S. W. SILVER and CO.'s Warehouses, Nos. 3 and 4, Bishopsgate-street (opposite London Tavern), where orders for Steam Packing, also Buffer Springs, Pump Clacks, and the various India-rubber appliances, will meet with prompt attention.

CAUTION.—S. W. S. and Co. have found it necessary to stamp all their manufacture, thus—"S. W. SILVER and CO. WORKS, NORTH WOOLWICH."

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.

Dining-dresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.

Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.

N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Gaswell-mews, Gaswell-road, London.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 60 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Beetham, Lancaster.

No. 1 quality, inches diameter, and price per yard.

¼	⅜	½	¾	1	1¼	1½	2	2½	3	3½	3 in.

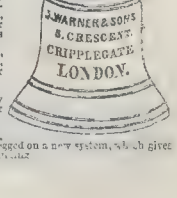
The hose is Burnettized at an extra charge of 3d. per yard Union Joints, Branch Pipes, and Jets, are also supplied.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.



J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and peeled on a new system, which gives superior tone and facility for practice.

AYLESFORD POTTERY COMPANY,

BELVEDERE-ROAD, LAMBETH.

MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

The above Company having now been in existence for nearly six years and having during this period supplied DRAIN PIPES, &c. to some of the largest Works in and around London, viz.:—The New Cattle Market, Wellington and Chatham Barracks, Deptford Dockyard, Her Majesty's Commissioners of Works, &c. and in all instances parties desire them to be sent to each,—take this as a fair test of the quality of the articles supplied by them; and as the Proprietors of several of the Potteries, beg to offer their goods to Contractors, the Trade, &c. of a first-rate quality and manufacture, and at the lowest possible prices, NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERS' ASSOCIATION.

LYTCHETT POTTERY.—For SALE by PRIVATE CONTRACT, the LEASE and PLANT of the above Premises. The lease consists of about fourteen acres of land and a good cottage. The land contains a large quantity of very superior clay for pottery and fire-goods. The drain-pipes made from the clay are equal, if not superior, to any yet in the market; and the fire-goods will bear comparison with any yet made. The plant comprises three pottery kilns and two brick kilns, with pipe machines, pug-mills, and all other necessary apparatus. Lytchett Pottery is 4 miles from the South-Western Railway, and 3 miles from the port of Poole.—For further particulars, and to view, apply to H. F. FISHER, Blandford.

GREAT REDUCTION in the PRICE of STONEWARE POTTERY from this date.

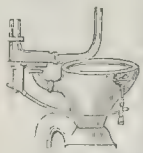
VICTORIA POTTERY, LEIGH, near SOUTHEND; London Establishment, Falcon Wharf, 80 Bankside.—DAVID MORGAN, Manufacturer of every article of Lambeth POTTERY, having now further reduced the prices, begs to offer to consumers and others, STONEWARE PIPES, &c. &c. on the most advantageous terms. The new lists of prices will be forwarded on application as above.—Feb. 11, 1856.

SUPERIOR LAND DRAINAGE.—AGRICULTURAL DRAIN-PIPES of all sizes, and in any quantities, can be SUPPLIED, either by water or land carriage, at a reduced rate, by applying to L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

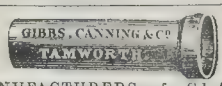
TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.

FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.



CLOSET BASINS, WHITE and BLUE, URINALS, &c.



MANUFACTORY—MILLWALL.

DEPOT:

ARTHUR-STREET, NEW OXFORD-STREET.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually used, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of which can be seen at the Premises of the Patentee, W. PATTEN, 23, Old Fish-street, near St. Paul's, London.—Price for Closet and Apparatus complete, from 25s. and perfect action guaranteed.

MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c.; also FIRE BRICKS, Vitrified Blue Bricks (as used by her Majesty's Commissioners of Sewers), White Fire Clay, Facing Bricks, &c. &c. Agents.—CHARLES RICHARDSON, No. 6, South Wharf, Paddington London.

SUPERIOR STONEWARE GLAZED PIPES of a quality not to be surpassed.—E. and W. STURGE respectfully invite attention to the very superior character of their stone pipes, which they are confident are such as must give great satisfaction,—the price being also lower than many in the trade, viz. 25 per cent. discount off the list for cash, Junction Bends, &c. Pans and Traps of the first quality, Yorkshire Paving, Sinks, Stils, &c. &c. at low cash prices.—E. and W. STURGE, Bridge Wharf, City-road.

N.B. A small extra charge is made upon goods required to be delivered.—October 1, 1855.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 2.

HIGH-PRESSURE VALVE COCKS, LAMBERT'S PATENT.

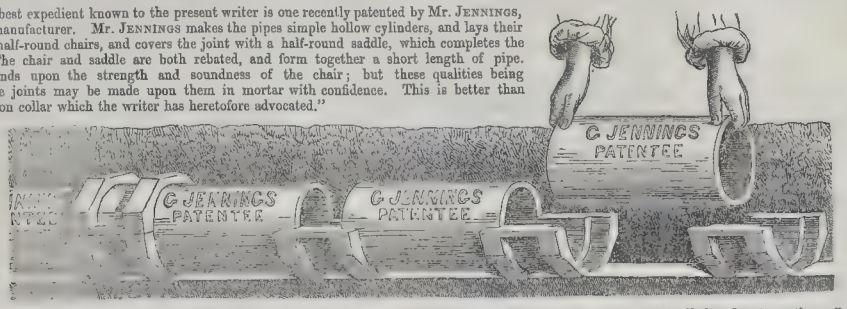
These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The quadrantum Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, prisons, asylums, &c.

THOMAS LAMBERT and SON,

Brass and Iron Founders, Short-street, New-cut, Lambeth.



TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and Tents for Balls or sale. Price Lists forwarded on receipt of address. Illustrations with full particulars, post free.—T. S. BOLTON, City Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

TO ENGINEERS, ARCHITECTS, SURVEYORS, AND OTHERS, INTERESTED IN EFFICIENT DRAINAGE.

Extract from the "ENCYCLOPÆDIA BRITANNICA," *Vol.* 8, *Part I. page* 129, *on Drainage of Towns, by* W. HOSKING, *Esq.*

"Simple hollow cylinders, whether of iron or of pottery, are more likely, with the same care in the manufacture, to be sound than socketted pipes of either substance; and for this reason, if for no other, pot pipes should be simple hollow cylinders, and some other expedient ought to be employed for making the joints, than that by which the pipe is liable to be rendered both unsound in its manufacture, and impracticable *when the work requires to be repaired.* Expedients have been devised to this effect, and are gradually making their way into use.

"The best expedient known to the present writer is one recently patented by Mr. JENNINGS, a London manufacturer. Mr. JENNINGS makes the pipes simple hollow cylinders, and lays their ends upon half-round chairs, and covers the joint with a half-round saddle, which completes the circuit. The chair and saddle are both rebated, and form together a short length of pipe. Much depends upon the strength and soundness of the chair; but these qualities being secured, the joints may be made upon them in mortar with confidence. This is better than the sheet iron collar which the writer has heretofore advocated."

In the "BUILDER" of February 9th, GEORGE JENNINGS stated that the price of his Patent Drain-Pipes, with all the advantages they offered, were "the same price as charged by the respectable London Potters." Two days after the appearance of this advertisement, all the Potters issued fresh lists, REDUCING THEIR PRICES AND INCREASING THEIR DISCOUNTS. And in the "BUILDER" of the 16th instant, one week after GEORGE JENNINGS'S advertisement, no less than seven notices of "GREAT REDUCTION IN PRICES" appear. THIS MAY OR MAY NOT BE OWING TO THE ADVERTISEMENT OF THE 9TH INSTANT. But to PREVENT MISTAKES, GEORGE JENNINGS does not AT PRESENT propose any reduction in the price of his Improved Pipes, as charged in list prior to the 9th of February, hoping the quality of the article, combined with acknowledged advantages, will be worth the halfpenny or penny per foot charged in excess of THE PRESENT London Potters' prices.

The Show-rooms now built on Jennings's Wharf, Holland-street, Blackfriars, will be open in March next, for the Exhibition of Sanitary Inventions, suitable for EVERY CLASS OF BUILDING, PUBLIC OR PRIVATE. In the meantime, Illustrated Particulars and Prices of JENNINGS'S Self-acting and other Waterclosets, Urinals, Lavatories, Pumps, Sluice-Valves, Fire and other Cocks, Gully-traps, Shop-shutter Shoes, Earthenware Drain and Soil Pipes, &c. &c. can be had free, on application, or by post, on enclosing two stamps to

GEORGE JENNINGS, SANITARY ENGINEER, GREAT CHARLOTTE-STREET, BLACKFRIARS.

Note.—The attention of Architects is particularly invited to a NEW DOUBLE-SEATED VALVE CLOSET, recently patented by G. JENNINGS. It is exceedingly simple, noiseless, and must be durable. The Patentee has such confidence in its efficiency, that a warranty for SEVEN YEARS will be given with every Closet sold. Same Price as ordinary Valve Closets, in their different qualities.

GREAT REDUCTION in PRICE of STONEWARE DRAIN-PIPES.

WILLIAM NORTHEN,

UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH,

Begs to call the attention of Surveyors, Contractors, Builders, and others, to a very great REDUCTION in the PRICES of his

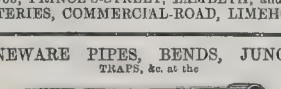
GLAZED STONEWARE DRAIN-PIPES.

LISTS OF PRICES FORWARDED ON APPLICATION.

GREAT REDUCTION IN PRICES

OF WHOLE OR HALF-SOCKET GLAZED STONEWARE DRAIN-PIPES.

AN ILLUSTRATED LIST OF PRICES SENT FREE ON APPLICATION TO



HENRY MILLICHAMP,

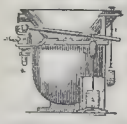
MANUFACTURER OF EVERY KIND OF STONEWARE DRAIN-PIPES, BENDS, JUNCTIONS, &c. &c.

BY PATENTED MACHINERY, AND UPON THE MOST APPROVED PRINCIPLE.

MANUFACTORIES—65, PRINCE'S-STREET, LAMBETH, and BRUNTON'S WHARF POTTERIES, COMMERCIAL-ROAD, LIMEHOUSE.

SALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS, TRAPS, &c. at the

NEAR POOLE, DORSET.



These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured in Hants and Dorset; they are made of clay of the finest quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon application to THE AGENTS.—

Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London;
Mr. J. S. HUDSON, the Pottery, Bournemouth, Poole;
Where a large stock is always kept on hand.

UNDERHAY'S PATENT REGULATOR CLOSETS for constant or intermitting supply, dispense with Cisterns, Service Boxes, Valves, Levers, Cranks, Levers, &c. &c.; much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets, on this principle, may be seen at the Works. They are very cheap, their efficience is guaranteed. 5,000 of them have been sold, and no instance of failure has occurred.

These Stoneware Closets are cheaper, stronger, and more ornamental, than any other. Many thousands are in use, and greatly approved of.

Manufactured by CHARLES BOTTEN and SON, Brass Founders, Crawford-passage, Clerkenwell London.

BY HER MAJESTY'S ROYAL LETTERS PATENT, APRIL 27, 1855

JAS. LEWIS'S PATENT STENCH-TRAP FOR STREET U-E.

Price, with Gutter Plate, 18 inches by 12 inches, each 25s.; weigh about 2 cwt. Larger sizes made if required.

FOR AREAS, &c.

Price, with Back Plate, 6 inches by 7 inches, each 6s.

FOR COURTS, YARDS, &c.

10 inches by 8 inches, each 10s.

The above articles are protected for the Patentee by the British Government, on account of their construction for the advantages they possess, being a perfect trap for preventing smell proceeding from itself or the drain, should there be water or not in the pan. When stench-traps are put down generally speaking no attention is ever paid to them afterwards—this renders them useless. The above, therefore, are a desideratum, as they require no attention. It is well known when cholera has visited this country, it commences and leaves last those places where the air is vitiated by obnoxious gases proceeding from drains, &c.

Any inhabitant suffering any inconvenience, is entitled, by the Sanitary Act to lay complaint before the public or private authorities of the property, to lay down stench-traps where they are required. Any persons interested in this advertisement will be kind enough to write to the patentee for drawings and if wishful, testimonials. Please order from any respectable ironmonger contractor, or the Patentee, JAMES LEWIS, Ironfounder, Abergavenny. Specimens to be seen in the Court of Inventions, Crystal Palace, Sydenham

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, showed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

PATENT DRAIN-PIPES, UNGLAZED, manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine Elms, London, and at all their Warehouses.

PRICES.

3 inch bore, in 2 ft. 6 in. lengths, at					3d. per foot.
4	"	"	"	"	4d. "
6	"	"	"	"	6d. "
9	"	"	"	"	9d. "
12	"	"	"	"	1s. 5d. "
15	"	"	"	"	2s. 6d. "

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture. And it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

SALES BY AUCTION.

TO CONTRACTORS, BUILDERS, BRICK-MAKERS, AND OTHERS.—The valuable Lease of extensive Brick-fields at West Drayton, Middlesex, a short distance from the Station on the Great Western Railway, and possessing important frontages to the Grand Junction Canal; also a Beer-Shop, House, and Shop, and Twenty-eight Cottages.

MR. MARSH has been favoured with instructions from the Trustees of Mr. Samuel Pocock, to SELL by AUCTION, at the MART, in the City of London, on WEDNESDAY next, FEBRUARY 27th, at TWELVE o'clock, in one lot, the important and valuable LEASE of extensive BRICKFIELDS, at West Drayton, three quarters of a mile from the Station on the Great Western Railway, by which line the fields are separated, and possessing important frontages on the Grand Junction Canal. The whole comprises about 100 Acres of excellent Brick Earth, with ranges of Sheds and Buildings; also a Beer-Shop, Grocer's Shop, and Twenty-six Labourers' Cottages, a Farm Homestead converted into Two Cottages, Large Barn, capital Stabling, Yard Sheds, &c. The property is held upon lease for a term of forty years, from September, 1849, at an annual rental. The purchaser may be accommodated with the valuable stock, of about 500 Bricks, Plant, and Implements, at a valuation.—May be viewed, and particulars obtained on the estate at the De Burgh Arms, West Drayton; of Messrs. LAWRANCE, PEAKE, and HOWARD, Solicitors, Old Jewry Chambers; of G. J. HUSEY, esq. Solicitor, 7, Ironmonger-lane; of W. EDWARDS, esq. Official Assignee, Sambrook-court, Basinghall-street; at the Mart; and at Mr. MARSH'S offices, 9, Charlotte-row, Mansion-house.

TO TIMBER MERCHANTS, BUILDERS, CONTRACTORS MASONS, SAW-MILL PROPRIETORS, AND OTHERS requiring spacious Business Premises.

MR. MARSH has received instructions to LET, with immediate possession, capital BUSINESS PREMISES, situate in East-street, Walworth, with residence attached. For particulars, apply at Mr. MARSH'S, Charlotte-row, Mansion House

EVERSFIELD and HORNE are instructed by the Proprietor to SELL by AUCTION, on the PREMISES, 74, Borough-road, Southwark, on WEDNESDAY, APRIL 2nd, at TEN for ELEVEN, the final portion of the extensive STOCK; comprising fountains, vases, figures, groups (including the large "Laocoon," the only one in artificial stone), centre-flowers, &c. To be sold without reserve, and will be the last sale this season. May be viewed one week previous, and catalogues had on the Premises, and of the Auctioneers, 40, Parliament-street, or Coal Exchange.

Sixth Sale of the Surplus Property belonging to the North London Railway Company, with Votes for the County of Middlesex.

MESSRS. BEADEL & SONS have received instructions from the Directors of the above Company to SELL by AUCTION, at the MART, London, on TUESDAY, MARCH 11th, at TWELVE precisely, in 21 lots, the NINTH Portion of the valuable FREEHOLD SURPLUS PROPERTY adjoining the Railway, Camden-town, comprising several freehold Houses, let at rents amounting to 65l. per annum; also well secured ground-rents arising from houses in Brecknock-place, Great and Little Randolph-streets, Grange-street, and Frederick-place. Also Sheppard's House, Homerton, and a plot of valuable leasehold land, Island at Dalston.—Particulars may be obtained of Messrs. TRAHUL, PAINE, & LAYTON, Solicitors, Guildhall-yard; of Messrs. KENYON, PEAKE, & CORNWALL-crescent, Camden-town; at the Auction Mart; and of Messrs. BEADEL & SONS, 25, Gresham-street, London

TO ENGINEERS, MILL-OWNERS, and OTHERS.—Important Sale of Machinery, THIS DAY, SATURDAY, at TWELVE, prompt.

AUGUSTUS SMITH is instructed by Mr. Joseph Apsey, Engineer, to SELL by AUCTION without reserve, upon the PREMISES, John-street, Rotherhithe-street, Cornwall-road, Lambeth, the whole of his valuable STOCK and TOOLS, including two horse-power high-pressure steam-engines, nearly finished; a 8-horse high-pressure engine, about 100 feet of shafting, with bearings, riggers, &c.; a very powerful boring-mill, a six-inch self-acting screw-cutting foot-lathe, compound shaping and planing machine, drilling machine, and other self-acting lathe, 2-feet centres, 21 feet bed, fitted up to plane; two other self-acting lathes, about two tons of cast and shear steel, smiths' forges, fans, and fittings complete, a quantity of planing, house fittings, &c.; 9-feet fly-wheel, cast-iron frame and gearing for two pairs of mill-stones, &c.—On view the day prior to Sale; and upon application at the Counting-house, of Messrs. SMITH, Engineers, 3, Crescent, Blackfriars road, near the bridge.

TO BE LET on Building Lease, the HALL and PREMISES belonging to the Worshipful Company of Weavers, opposite the entrance to Guildhall, in Basinghall-street, a suitable site for the erection of Offices or any large building. Frontage, about 37 feet; depth 120 feet. The Court will meet at the Hall to receive TENDERS for the same, on TUESDAY, the 4th MARCH next. The premises may be viewed by permission of the tenant, and further particulars had of the Clerk, JOSEPH JENNINGS, Esq. 1 Field place, Gray's-inn-square; and of Messrs. DAVIDSON and BRADBURY, Solicitors, No. 15, Bedford-street.

FREEHOLD GROUND, CHANCERY-LANE and FETTER-LANE.—The Commissioners of Sewers of the City of London hereby give Notice, that they will meet at the GUILDHALL, on FRIDAY, the 7th day of MARCH, 1856, at TWELVE o'clock at noon precisely, to receive TENDERS for a Building Lease for Eighty years, of certain PLOTS of GROUND, situate at the south-west end of Chancery-lane, and the south-east end of Fetter-lane.—Further particulars may be had, and plans seen, on application to Mr. HAYWARD, Engineer to the Commission, at these Offices, in the Guildhall. The Commissioners will require a plan and elevation of the premises proposed to be built, to be submitted to them for approval; and do not bind themselves to accept any proposal, unless deemed advantageous.

JOSEPH DAW, Principal Clerk.
Sewers' Office, Guildhall, January 2, 1856.

HARROW.—FREEHOLD LAND.—TO BE SOLD, 100 ACRES, in a ring fence, and several other eligible plots of FREEHOLD LAND, at a moderate price, situate on the Harrow Railway Station, surrounded and intersected by Residences of the first class of the principals of the Harrow School, and the London and North Western Railway Company offer to persons building houses of approved elevation, worth 50l. per year each, a free first-class pass between Harrow-on-the-Hill and Euston-square, for one year. There is an abundant supply of excellent water, and very superior brick-earth on the land. Apply to WILLIAM B. COOPER, Esq. Solicitor, 9, Verulam-buildings, Gray's-inn.

FREEHOLD LAND TO BE LET, for long terms, at moderate rent, as under, adjoining on the Ice-cart, Bromley, suitable for manufacturing premises; near the East and West India Docks, for fourth-rate houses; in the East India Dock-road, for second or third rate houses; near the Victoria Docks, for fourth-rate houses; and any improved ground-rents made may be purchased; on Windmill-hill, Gravesend, overlooking the river Thames, for second or third-rate houses.—Apply to Messrs. MORRIS and SON, Architects, Poplar.

TO BE LET, SEMI-DETACHED VILLAS, in immediate neighbourhood of Victoria New Docks, and in parish of Plaistow. Each house contains two parlours and breakfast-room, three bed-rooms, kitchen, scullery, pantry, and W.C. They are completely fitted up with every convenience.—copper, water, stoves, and grates. They are partially grained oak and varnished, and all are papered with newest patterns. They are ready for immediate occupation, and, in consequence of the liberality of the builder, they will be let for the low rents of 28l per annum. Taxes are very moderate, and railroad and omnibus conveyance within easy distance.—Apply to Messrs. WM. G. and E. HARRISON, Architects, 38, Bloomsbury-square, London; at whose Office views and drawings may be seen.

TO BUILDERS.—Dalston.—TO BE LET or SOLD, a GATEWAY HOUSE and PIECE of GROUND behind, 70 feet by 80 feet. Cottages or workshops could be built on the ground.—Apply to JOHN SCARD, Esq Solicitor, 3, North-crescent, Bedford-square.

TO BE SOLD, or LET, on lease, term 99 years, a PIECE of GROUND, for building, 30 feet frontage, about 240 deep, in the AMHERST-ROAD, HACKNEY DOWNS. The ground is made up back and front, and planted with shrubs and fruit trees, with boundary walls, drains, &c.—Apple at Amherst House, Amherst-road, Shakelwell-s, Stoke Newington.

WANTED, FREEHOLD LAND, to build on for a Public Institution, within ten miles of London: no objection to an old Mansion on the same. Full particulars, endorsed "Freehold Land," sealed, and addressed to the Board of Guardians of St. James's, Clerkenwell, to be sent to the Workhouse, Coppice-row, on or before TUESDAY morning, the 26th instant.—By order,
EDWARD SCARGILL, Clerk to the Guardians.

FREEHOLD GROUND for Building on.—TO BE LET, upon BUILDING LEASES, PLOTS of GROUND, in that healthy locality, Holloway, two or three minutes' walk from the Camden-road Station, Omnibuses every four or five minutes to all parts of London. Situate in St. John's-road, where houses let as fast as built. For particulars, apply to Mr. H. WITHERS, 9, Poultry. The leases direct from the freeholder Money advanced

TO BUILDERS.

LEE, near BLACKHEATH.—FRONTAGES TO BE LET, for detached or semi-detached villas, on the Belmont Estate. This estate contains the finest sites for building purposes anywhere near London, and good villas are in great demand, on account of the situation being lofty, dry, well drained, and exceedingly healthy. Assistance will be afforded to responsible parties.—For particulars, apply to Messrs. J. and C. W. TODD, Milner-street, Brompton, London, or Belmont, Lee, Kent; or Messrs. NELSON and INNES, 6, Whitehall.

ALDERSHOTT CAMP.—PLOTS of LAND TO LET on Building Leases, commanding good frontages and a limitable sites, facing the permanent barracks now erecting, and near the Queen's pavilion. For particulars apply to Mr. THOMAS WHITE, Jun near the Alliance Hotel, and opposite the permanent barracks, Aldershott, Hants.

GROUND TO BE LET in the vicinity of Whitechapel, suitable for a Builder or a Manufactory, containing an area of about 2,000 superficial feet, with some shells erected thereon.—For particulars, apply at J. J. Hickmott's Sawmills, Church-street, Mile-end New-town.

WESTON-SUPER-MARE, SOMERSET. THE WEST COTTAGE ESTATE.—FREEHOLD LAND for the ERECTION of HOUSES, in the centre of the town, and overlooking the sea. TO BE SOLD, in one or more lots, on very reasonable terms.—Further particulars of R. G. PHILLIPS, Weston-super-Mare.

FACTORIES, GRANARIES, &c.—GROUND TO BE LET, suitable for the ERECTION of FACTORIES, with every wharf frontage, on a canal about three miles from London.—Inquire of Mr. ASHFITEL, 5, Crown-court, Old Broad-street, City.

TO LIME and STONE MERCHANTS.—TO BE LET, at a moderate rent, the CHANCELLOR'S WHARF, Queen street, Hammersmith, near the Suspension-bridge, with dwelling house, stable, and sheds.—Apply on the Premises.

TO STONEMASONS, IRONMONGERS, and OTHERS.—TO BE SOLD, several six-roomed CARCASSES, with roofs ready to be made, and the sewers in, and the houses let close up to it. The whole or part of the purchase money would be taken out in stone work or ironmongery, or any other kind of building materials.—Apply on the property, to BAUGHAN and MILLS, top of Carlton-road Kentish-town

TO PLUMBERS, GLAZIERS, PAINTERS, GAS-FITTERS, &c.—TO BE DISPOSED OF, with immediate possession, a very old-established BUSINESS in the above trades.—Apply to MR. JOS. COOPER, Ironmonger, High-street, King's Lynn

TO PLUMBERS, PAINTERS, AND GLAZIERS

TO BE SOLD, a first-rate BUSINESS, in a market-town, situated in the county of Suffolk. The premises comprise a convenient and comfortable dwelling-house, with show and work shops, stabling, gas house, yard and premises, and every requisite necessary. It has been established upwards of sixty years by the present occupier's father, and the reason of parting with it is ill-health, which can be testified. The terms are moderate. For further particulars, inquire of Mr. C. HARRIS, 58, Guildford street, Russell-square. Personal application between nine and seven in the afternoon

TO ENGINEERS.—TO BE DISPOSED OF, by direction of the executors, a very compact BUSINESS in London, which has been established many years. The premises are centrally situate, and conveniently arranged for the business. The principal tools are nearly new, by Smith, Beacock, and Tannett, of Leeds, and include a 13-inch self-acting slide-lathe, planing machine, and drilling machine; there are also three other lathes, high-pressure steam-engine and boiler, smiths' forges, and tools, bitter's benches, vices, and tools. About £—— is required, and to any active young man desirous of starting in business, a very eligible opportunity is presented.—For further particulars, apply to Messrs. FULLER and HORSEY, Billiter-street, City.

TO BUILDERS, PAINTERS, &c.—ALTERATIONS and additional WORKS to be EXECUTED at the villa opposite Barnes Church, Barnes, for GEO. GREEN-HILL, Esq.—Drawings and specification of the same, to be had of Mr. Smith, 26th, 27th, and 28th of FEBRUARY, at the PREMISES to be sent to the place address, on MONDAY, the 3rd of MARCH, 1856.—G. GORDON STANHAM, Architect, St. Alban's Cottage, North-end, Hammersmith.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX, Brothers, & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, February 24, 1856.

ARCHITECTURAL ASSOCIATION, 9, CONDUIT-STREET, LYONS-INN-HALL, STRAND.—The next Ordinary Meeting will be held MARCH 7th, when Mr. BAILEY will resume his paper on "Cemeteries."

The Class of Design will meet March 14th; subject for sketch, "A Monument to a Musical Composer."

T. W. GOODMAN, } Honorary
J. A. BUNKER, } Secretaries.

SCHOOL of ART and TRAINING SCHOOL, MARLBOROUGH HOUSE, Pall-mall. The Spring Session will commence on the 3rd of MARCH, and terminate on the 15th of JULY. Hours of Study: Morning, Ten to Three. Evening, Seven to Nine, daily, except Saturdays. Fees for Morning and Evening, 4l.; for Evening, 2l. per session. The School for Female Students not in training, is at 37, Gower-street, Bedford-square.—For prospectus's, apply at the Head Master's Office, Marlborough House.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.
Head-Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to develope its relation to the requirements of trade and manufacture, and its application to the common uses of life. Special courses are arranged in order to qualify Schoolmasters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects:—Free hand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still Life, &c., the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees 4l. per session, or part of the session. For Evening Classes only, 2l. per session.

The Class for Practical Geometry and Perspective, or that for Moulding and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. M'Ian. Fees per session.—Advanced Class, 2l. and 4l.; Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall-mall, London.

ART UNION OF LONDON (by Royal Charter). Prizeholders select for themselves from the Public Exhibitions. Every subscriber of One Guinea, will have besides the chance of a Prize, an impression of a plate of Harvest in the Highlands, engraved by J. T. Willmore, A.R.A. from the important and well-known Picture by Sir E. Landseer, R.A. and Sir Augustus Callcott, R.A. The Prints are now ready for delivery.

GEORGE GODWIN, } Honorary
LEWIS POCOCK, } Secretaries.

444, West Strand.

LECTURES to WORKING MEN, being the second for these courses for the present session, at the Museum of Practical Geology, Jermyn-street, will be on the First Principles of Chemistry, by Dr. HOFMAN, F.R.S. to be commenced on WEDNESDAY, 5th MARCH, at 8 o'clock p.m. Tickets may be obtained at the Museum, on MONDAY, the 3rd, from TEN to FIVE o'clock, upon payment of a registration fee of 6d. for the whole course.

TRENHAM REEKS, Registrar.

COMPETITIONS.

TO ARCHITECTS, SURVEYORS, AND OTHERS.

PLANS, DESIGNS, and DRAWINGS are requested for the ERECTION of TWO CEMETERY CHAPELS, under one roof, together with a Lodge and Entrance-Gates, for the Grantham Burial-Ground containing six acres of land, to include ground-plans and elevations, and to be accompanied by approximating estimates of the expense. The buildings to be faced with Ancaster stone, and the grounds to be of Mapperfield stone. The whole expense (including fittings, &c. of chapels) not to exceed the sum of 1,800l. 10l. is offered for the plan of the chapels and buildings considered to be the most suitable, and the architect shall also contract for the works; and 5l. for the second best. The whole of the plans, &c. to be sent (one, united and endorsed, but without any name or distinguishing mark, on or before SATURDAY, the 1st day of MARCH next, inclosing a sealed letter in each case from the person forwarding it.

By order of the Burial Board.
ROBERT HENRY JOHNSTON, Clerk.

Grantham, Feb. 5, 1856.

LIVERPOOL FREE PUBLIC LIBRARY and MUSEUM. To ARCHITECTS. The Council of the Borough of Liverpool are about to ERECT a BUILDING for the purposes of the FREE PUBLIC LIBRARY and the DERBY MUSEUM, and offer a premium of One Hundred and Fifty Guineas for the best Design, and One Hundred Guineas for the second. The Designs are to be sent in on or before SATURDAY, MAY 31. Copies of the printed conditions and instructions to Architects, competing; and lithographed plans and sections of the site, may be had on application to Mr. J. STUART DALTON, Librarian, Free Public Library, Duke-street, Liverpool.

TO ARCHITECTS, &c. — PLANS for a NEW WORKHOUSE for BOLTON UNION.—The Guardians of the Poor of the Bolton Union are desirous of obtaining PLANS, SECTIONS, and WORKING DRAWINGS for the ERECTION of a WORKHOUSE, to accommodate 1,000 inmates, the cost of the buildings not to exceed 18l. per head. A premium of 50l. will be awarded for the best, and 30l. for the second best plan, but the Guardians will not be responsible for any payment for unsuccessful designs. The plans of the two successful competitors will be the property of the Guardians, who do not pledge themselves to employ either of the successful competitors in carrying out the undertaking. The designs must be sent in under seal, without name, and with a private mark or motto thereon, accompanied by a letter under cover, and sealed, containing a corresponding mark or motto, and the designer's name and address, to the Clerk, on or before MONDAY, the 7th APRIL, 1856.

JOHN WOODHOUSE, Clerk to the Guardians.
Union-office, Acresfield, Bolton, February 15, 1856.

GRANTHAM BURIAL BOARD.—EXTENSION of TIME for PLANS, &c. The period for sending in Plans for Chapels, Lodge, and Entrance Gates, is EXTENDED to SATURDAY, 22nd MARCH. Plans are also requested for PLANTING the GROUND, LAYING OUT the ROADS and WALKS therein (a third as a crescent), on third one reserved, to be set in by the same time, for which an additional premium of 2l. 2s. is offered. The ground is an oblong square of 220 yards by 134 yards. Entrance west.—By order of the Board,

ROBT. HY. JOHNSTON, Clerk.

Grantham, February 20th, 1856.

TO ARCHITECTS AND SURVEYORS.

THE COMMITTEE for BUILDING NEW NATIONAL SCHOOLS at LUTON, Beds, are desirous of receiving DESIGNS in COMPETITION for the ERECTION of such SCHOOLS. A plan of the site, with further particulars, may be had on application, by letter only, enclosing a P.O. postage stamps, to Mr. D. B. STALKER, National Schoolmaster, Luton.

CONTRACTS.

BURLEY-IN-WHARFEDALE (Yorkshire) SEWERAGE WORKS.—The Local Board of Health for the district of Burley-in-Wharfedale hereby give notice, that they are prepared to receive TENDERS from competent persons for MAKING and FINISHING certain SEWERS, DRAINS, MANHOLES, GULLIES, and other WORKS required for the sewerage and drainage of their district. Duplicate copies of the plans, sections, details, drawings, and specifications may be seen at Burley, on application to the undersigned: also at the Offices of Mr. J. M'LANDSBOROUGH, Civil Engineer, 24, Queensgate, Bradford, from whom printed forms of Tender, and any further information may be obtained. Tenders, properly sealed and endorsed, must be delivered to the undersigned, on or before FRIDAY, the 7th day of MARCH next. The Local Board do not bind themselves to accept the lowest or any Tender.—By order,

EDWARD BRUMFITT, Clerk to the Board.
Burley-in-Wharfedale, near Otley, 13th February, 1856.

KENSWORTH CHURCH.—Builders desirous of TENDERING for REPAIRS at the PARISH CHURCH of KENSWORTH, in the County of Hertford, near Dunstable, are requested to send in their Tenders, on or before MONDAY, the 10th MARCH, 1856, addressed to the Churchwardens, at Kensworth. The drawings and specifications may be seen on application at Mr. ROUMIEU'S Office, 10, Lancaster-place, Strand, London; or at the Churchwardens', Kensworth.

TUNSTALL LOCAL BOARD of HEALTH.—To BUILDERS.—CONTRACT for ALTERATIONS of TOWN-HALL.—The Tunstall Local Board of Health are desirous of receiving TENDERS for the necessary WORKS required in the Alterations and Improvement of the Town-hall. Drawings and specifications may be inspected at the Office of the Local Board, Longside-street, Longton, from MONDAY, the 3rd, to SATURDAY, the 8th of MARCH; and further particulars may be obtained, on application to Mr. G. T. ROBINSON, Architect, 34, Upper Parade, Leamington. Tenders to be delivered to me, sealed and endorsed, on or before TUESDAY, the 11th of MARCH next.—By order,

Tunstall, 20th February, 1856. J. LOWNDES, Clerk.

CONTRACTS.

ORDNANCE CONTRACT.—To BUILDERS and CONTRACTORS. Sealed TENDERS will be received by the Director-general of Contracts, War Department, Pall-mall, London, until TWELVE o'clock on MONDAY the 3rd MARCH next, for the WORKS required for the ERECTION of a LAND TRANSPORT ESTABLISHMENT at the Camp, Aldershot, in the manner described, and specified and numbered Ten in a Schedule, copies of which may be seen, and forms of Tender obtained, on application to Mr. BARLE, Clerk of Works, Royal Engineer Office, Camp, Aldershot, on and after MONDAY next, the 3rd inst. The Tender to be endorsed, "Tender for Land Transport Establishment, Aldershot." The War Department reserves the right of rejecting the whole or any of the Tenders.

War Department, All-shot Camp, 30th February, 1856.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London District, Tower, hereby gives notice, that sealed TENDERS, addressed to the Director-general of Contracts, will be received at the War Department, Pall-mall, on or before the 20th MARCH next, for the REPAIR of FIRE-ENGINES, BUCKETS, and for executing the WORKS and REPAIRS of the Royal Engineer Department in the London District, viz.: DOMEY'S, WINDSOR, CROYDON, and CARSHALTON HOUSES, and HAMPTON COURT, for a period of three years from the 25th of MARCH next to the 31st MARCH, 1859. Printed schedules and forms of TENDER may be obtained at the Royal Engineers' Office, Hyde-place, Pimlico, between the hours of TEN and THREE, and all Tenders sent in to the 20th MARCH inclusive. The War Department reserves to itself the right of rejecting the whole or any of the Tenders.

Royal Engineers' Office, London District,
February 25, 1856.

TO BUILDERS AND OTHERS.

THE JOINT BURIAL BOARD for the TOWNSHIP and PARISH of FOLKESTONE, in the county of Kent, are desirous of CONTRACTING for BUILDING and FINISHING, at the Cemetery, near Cheriton-road, TWO CHAPELS, a Porter's Lodge and Appurtenances, and the Boundary Wall, and for providing and fixing the Entrance-gates, &c. Persons willing to contract may see the plans and specifications at the office of JOSEPH GLEDSTANES, Esq. Architect to the Board, Bouverie-square, Folkestone, between the hours of TEN and FOUR on any day after the 25th instant. Sealed Tenders (marked "Tender for Buildings at Folkestone Cemetery") for executing the whole or any of the works, are to be left at my offices in Church-street, Folkestone, not later than FOUR o'clock in the afternoon of TUESDAY, the 18th day of MARCH next. It is stipulated that it shall not be incumbent on the Board to accept the lowest or any Tender. By order of the Board,

Folkestone, 12th February, 1856. RICHARD HART, Clerk.

THE MARCH LOCAL BOARD of Health are prepared to receive TENDERS from competent persons willing to EXECUTE any of the WORKS comprised in the following CONTRACTS for the Drainage and Water Supply of the District:—

CONTRACT A.—Sewers and Drainage Works.
CONTRACT B. Well-sinking, Brick Tower, and Engine-House.
CONTRACT C.—A Steam-Engine, Wrought-iron Tank, Cast-iron Pipes, Pipe-laying, and Sundry Iron-work.

The plans and specifications may be inspected at the Office of the said Local Board in MARCH. Duplicate copies may be seen, and printed forms of Tender and further information may be obtained, on application at the Office of Mr. R. REYNOLDS ROWE, Civil Engineer and Architect, 1, Paston-terrace, Cambridge. Sealed Tenders, properly endorsed, are to be delivered at the office of the said Local Board, not later than SATURDAY, the 8th day of MARCH, 1856. The Local Board are not bind themselves to accept the lowest or any of the Tenders.—By order,

THOS. T. ELLIOTT, Clerk to the Local Board.

March, Isle of Ely, February 11, 1856.

BURSLEM LOCAL BOARD of HEALTH. CONTRACT for FURNITURE and FITTINGS.—The Burslem Local Board of Health are desirous of receiving TENDERS for the SUPPLY of the necessary FURNITURE and FITTINGS for the New Town Hall. Drawings and specifications may be inspected at the Offices of Mr. G. T. ROBINSON, Architect, 22, Upper Parade, Leamington, on MONDAY, the 3rd, to SATURDAY, the 8th MARCH; and at the Public Offices, Moorland-road, Burslem, from MONDAY, the 10th, to SATURDAY, the 15th MARCH.—Tenders to be duly endorsed, sealed and endorsed, on or before TUESDAY, the 18th MARCH next.

By order, J. LOWNDES, Clerk.

Public Offices, Moorland-road, Burslem, 25th Feb. 1856.

TENDERS for BRICKS.—The Directors of the Commercial Gas Company will meet on FRIDAY, the 7th MARCH, at WILLY-WORK, to receive TENDERS for 10,000 best Common STOCKS, to be stacked on the Company's works Stepney, as directed by the Company's engineers. A sample of the Bricks to be seen with the Tender. The Directors do not bind themselves to accept the lowest nor any Tender.—By order of the Board,

GEO. JAQUES, Secretary.

CONTRACT for the SUPPLY of BUILDING MATERIALS for CONVICT PRISONS.—Persons desirous of TENDERING for the SUPPLY of TIMBER, Deals, Slates, Lime, Sand, Bricks, Lead, Glass, Wrought and Cast Iron, Ironmongery, Gas and Water Pipes, White Lead, Oils, &c. for twelve months from the 1st of APRIL next to the 31st MARCH, 1857, for Pentonville, Millbank, Brixton, Parkhurst, Portsmouth, Dartmoor, Chatham, and Portland Prisons, and Birmingham House, Fulham, are requested to forward the same, addressed, "Directors of Convict Prisons, 3, Parliament-street, London," on or before MONDAY, the 10th MARCH, 1856, till SIX o'clock p.m. Forms of Tender may be had on application at the several Prisons; or at the Office of the Directors, 45, Parliament-street, London.

45, Parliament-street, 18th February, 1856.

[For remainder of Contracts see next page.

CONTRACTS.

WILTON LOCAL BOARD of HEALTH. — T. ST. NEWARE PIPE MANUFACTURERS and OTHERS. The Local Board are desirous to receive TENDERS for the supply of about [illegible] SALT GLAZED STONEWARE PIPES (“Jennings’s Patent,” as well as others), of the respective diameters of [illegible] and [illegible] inches, and of about 2,000 lineal feet of each gauge; also RED EARTHENWARE PIPES, of great porosity. Specifications with forms of Tenders, may be had upon payment of 2s. 6d., and further particulars will be given on application to the Clerk to the Board. Tenders, endorsed “Salt glazed Stoneware Pipes,” and “Red Earthenware Pipes,” and addressed to the Chairman of the Board, to be sent to the Clerk, on or before MONDAY, the 10th MARCH next, by TEN o’clock, a.m. The Board do not bind themselves to accept the lowest Tender.

By order of the Board,

THOMAS THRING, Clerk.

Wilton, near Salisbury, Feb. 23, 1856.

BOROUGH of SALFORD. — NEW CEMETERY. TENDERS for WORKS. The Burial Board Committee are desirous of receiving TENDERS for the ERECTION and COMPLETION of THREE MORTUARY CHAPELS, LODGE, and ENTRANCE GATES, at the New Cemetery. The plans and specifications may be inspected at the Office of the Clerk of the Board, Bexley-square, Salford, from MONDAY, the 3rd, to FRIDAY, the 7th MARCH, inclusive. Tenders must be delivered, sealed, at the Office of WILLIAM HILL, Architect, No. 50, Ashton-street, Salford, on or before MONDAY, the 24th MARCH, by TEN o’clock, a.m., and must be endorsed “Tender for Mortuary Chapels.” The Committee will not be bound to accept the lowest or any Tender.

By order of the Committee,

CHARLES GIBSON, Town-clerk.

Town Hall, Salford, Feb. 23, 1856.

ST. PANCRAS IRONWORKS,

OLD ST. PANCRAS-ROAD, OPPOSITE THE OLD CHURCH, LONDON.

TO ARCHITECTS, ENGINEERS, BUILDERS, AND CONTRACTORS.

HER MAJESTY'S
ROYAL LETTERS PATENT.

FOR IMPROVEMENTS IN THE CONSTRUCTION OF
CORRUGATED IRON BUILDINGS
AND ROOFS,
As erected for and approved of by Government.
FOR ENCLOSURES,
This Patent is as Strong, as Durable, and much Cheaper, than
BRICK WALLS,
And as Portable as HURDLES.

CASTINGS,
HEAVY AND LIGHT,
PLAIN AND ORNAMENTAL.

WROUGHT
IRON-WORK,
AND FORGINGS,
OF
EVERY DESCRIPTION.
SPECIMENS MAY BE SEEN AT THE WORKS.

ENAMELLED MANGERS,
From 17s. 6d.
Patentees of the latest Improvements in Manger and Rack, and Manger, Rack, and Water Trough, approved of by the
ROYAL VETERINARY COLLEGE.
EVERY DESCRIPTION OF STABLE FURNITURE.

IRON ROOFING OF EVERY DESCRIPTION. CORRUGATED IRON, PLAIN OR GALVANIZED, AT PER CWT.
ESTIMATES BY POST, OR ON APPLICATION. PRICES EQUAL TO ALL COMPETITION.
☞ ADDRESS—THE MANAGER OF ST. PANCRAS IRON WORKS, OLD ST. PANCRAS-ROAD, LONDON.

TYERMAN'S PATENT HOOP-IRON BOND FOR BUILDING PURPOSES.

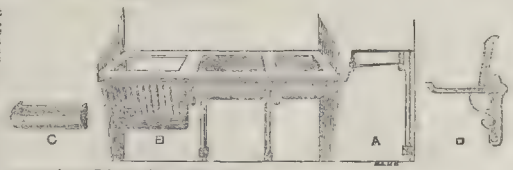
TARIFF OF PRICES
Beyond the current Price of Hoop Iron.

The undermentioned Gauges are kept in stock; but any Gauge or width will be supplied within a few days, at a small advance on the following prices:—

Gauge	In. wide.	Per 1,000 ft.
No. 16	.. 1¼ ..	7s. 0d.
15	.. 1½ ..	7s. 6d.
15	.. 1¾ ..	8s. 0d.
15	.. ..	8s. 6d.
15	.. ..	9s. 0d.

Plan and Elevation of Bond, showing Position and Form of the Claws.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 11½ inches on both sides alternately, and turning one side of each notch in succession in contrary directions on the reverse side of the iron, thus forming reversed claws, which are so bent that a direct end grain of the iron is presented longitudinally, offering most powerful and effectual resistance, and which become, when built into the brickwork, embedded in the structure, preventing the possibility of longitudinal escape, and a complete and permanent bonding together of the whole building is thereby obtained.



Patentee—FREDERICK TYERMAN, Architect, 44, Weymouth-street.

Sole Manufacturers—THOMAS PERRY and SONS, Government Contractors, Bilston.
London Depôt—463, OXFORD-STREET.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

PARIS EXHIBITION AWARD TO
COTTAM and HALLEN, of Winsley-street,

The original Inventors of the PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, and to which they have made important additions, the main features of the same being explained in the following description and Engraving.

A represents the Patent Hinge guide and Collar-rein, the slit of which is taken to the back of the manger-works with freedom and ease up or down the guide-bar, and is noiseless in its operation, as also a sure preventative against the most restive horse being cast in the stall.

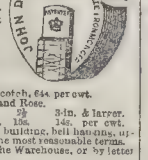
B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, made of galvanized sheet-iron, light and durable.

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers; San-tary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Bracket, and every Article in Stable Furniture in stock.



An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

The New Illustrated Catalogue for 1856 gratis on application. Estimates and Designs.
COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.
Castings Warehouse removed from 81 to 83, Upper Thames-street.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.
THIS IS THE ORIGINAL PATENT
for important improvements in stable-fittings, hay-box, manger, and water-trough, as one fixture, including a method surpassing all others for conveying the collar rein and halter-weights to the back of the fitting, to prevent the horse being cast in the stall. The Hay-Box effects a considerable saving of hay and seeds, and the front roller is a valuable preventive against accident and crib-biting. Stable-fittings of every description, plain, enamelled, or galvanized. Also the New Patent Loose Box Fittings, Surface Gutters with moveable cover-plates, Stable Posts, Ramps, Sills, and all kinds of Stable Furniture in Stock. Iron Gates, Tomb Railings, Hurdles, Fencing, &c.

JAMES BARTON, IRON FOUNDER, &c. 370, OXFORD-STREET, London.

The BEST CURE for SMOKY CHIMNEYS.—Fair used by her Most Gracious Majesty KITE'S PATENT VENTILATING and SMOKE-CURING CHIMNEY CAPS.—In use on Buckingham Palace. In use also on St. James's Palace, Claremont, Windsor Castle, Government Buildings, &c. Wrought iron, 36s.; galvanized ditto, 30s.; cast iron, 25s. each.
The merits of this invention are proved by practical experiments, daily, at the Royal Polytechnic and the Crystal Palace, and Manufactory. Illustrated catalogues sent on receipt of two postage stamps.
Address, JAMES BARTON, 370, Oxford-street, London.

IRONMONGERY.—Builders and the Trade generally will effect a considerable saving by purchasing of CLUSE and ROSE, Wolverhampton Patent Stove and Range Manufacturers, 35, City-road, corner of Tabernacle-row.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

PARIS EXHIBITION. — ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1846. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of loo-tables, chiffoniers, consoles, &c.; baths, baptistries, altar tablets, pilasters, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 30 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

TO CONTRACTORS, BUILDERS, &c.—EIGHTY AXE-DRESSED GRANITE BLOCKS TO BE SOLD a bargain. They are worked all round, and the beds made and taken to a height. The lengths are 3 feet 3 inches and 3 feet 7 inches, 1 foot 11 inches wide and 1 foot 9 inches high. To be seen at the South Devon Wharf, Lower East Smithfield.—Price and particulars can be had by applying, by letter only, to B. R. PENTON, Post-office, Lupus-street, Pimlico.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations.
FROM 2s. 9d. PER SQUARE YARD.
Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.
Apply to JOHN PILKINGTON, Poloneeau and Limmer Asphalte Office, Monument chambers, 14, Fish-street-hill, London.
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, White-friars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.
W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No. 21 Wharf, Harrow-road, to 2, North Wharf-road, Paddington, have now on sale good Garden and Screened Gravel. For terms, &c. apply at the Wharf.
Contractors supplied to any extent.

By her Majesty's Royal Letters Patent

THE ROYAL PATENT DECORATIVE GLASS COMPANY, 21, Castle-street, Southwark-bridge-road. NOTICE of REMOVAL.—REMOVED to No. 13a, CUMBERLAND-MARKET, REGENT'S-PARK, where machinery has been erected to carry on the manufacture of this most important branch of ornamental glass.
Orders can now be executed, with the greatest cheapness and despatch, by EDWARD BAILLIE and CO. 13a, Cumberland-market, and 113, Wardour-street, Soho (successors to M. R. and D. having erected new and powerful machinery for the sole manufacture of the above, are enabled to offer them at a considerable reduction of price.—Prospectuses can be had or forwarded, on application to 34, Gray's-inn-lane, Holborn.

TO BUILDERS AND OTHERS.
AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH-BOARDING of all descriptions. Also an extensive stock of Dry White, Yellow, and Pine Cut Stuff, Slating, Battens, Pantile Laths, Oak Plank, Sean Cills, &c. Timber of all kinds, Planks, Deals, and Battens, fetched from the docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

FURTHER REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of buyers to the further reduction in the price of Yellow Deals, and the very low prices of Pine and other Deals, &c. &c.:—

Yellow Deals, from	£21	0 per 120
Do. Battens	12	10 "
Spruce Deals, from	18	0 "
Pine Plank, 12 ft. 3 in. by 11, from	22	10 "
Mahogany in Planks and Boards	6d. per foot super.	

Prepared Flooring, &c. equally low. A list of prices forwarded on receipt of a postage stamp.—Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

GREAT REDUCTION. — Yellow Deals, 3s. 6d.; Pine Plank, 3s. 9d.; F. Walnut, 7½d.; Mahogany, 6d.; ½ Yellow Battens, 12s. 10d. per 120 12 feet. Cartage free to any part of town.—T. FORMAN, 1, Walnut-tree-walk, Lambeth-walk.

SEASONED FLOORING.—GEO. NOKES and CO. (late Archbutt and Atkinson), beg to acquaint builders and the trade, that they have a large STOCK of DRY WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at the following reduced prices, for cash:—

¼ inch White, 13s. 6d. per square.		¼ inch Yellow, 15s. per square.	
¼ ditto	16s. "	¼ ditto	16s. 6d. "
1 ditto	18s. "	1 ditto	20s. "

Laths, 36s. per load.
Also Timber, Deals, Planks, &c. Mouldings by machinery in very great variety.
ST. PANCRAS SAW-MILLS, Cambridge-street, Old St. Pancras-road.

GEORGE SMITH, TIMBER-MERCHANT, LONDON.—Address to No. 18, Binfield-road, Clapham-road, Stockwell; or Jamaica Coffee-house, City. Goods delivered from the Docks. PREPARED FLOORING, &c. from the Saw-mills. Goods in Bond for Exportation.
N.B. A large Stock of Dry Prepared Flooring, &c. from Two to Four Years Old.

ACORN TIMBER WHARF and SAW MILLS,
CANAL BRIDGE, OLD KENT-ROAD, LONDON.
A Monthly Price Current forwarded on application.
RICHARD MAY, Proprietor.

EDWARD SIMMS begs to inform Builders and the trade, that he has now on hand at his manufactory the first of its kind ever established, a large assortment of PREPARED FLOORS and MATCH BOARDING, seasoned, and ready for use, from ¾-inch to 1½-inches thick, in White or Yellow Deal, Oak, or Pitch Pine. Also Dry Deals, in all thicknesses, Slating Battens, Pantile Laths, Oak Cills, Plank, and Scantlings. Mouldings in clean Pine, to any design. A pattern list forwarded on application.—Address, E. SIMMS, Flooring Manufactory, Wilton-road, Pimlico; and Sawing, Planing, and Moulding Mills, King's-road, Chelsea.

OAK SASH-CILLS, QUARTERING, &c. ready cut out to sizes and lengths required, at the lowest price.
Address, E. SIMMS,
SAWING, PLANING, AND MOULDING MILLS,
KING'S-ROAD, CHELSEA, AND WILTON-ROAD, PIMLICO.

COUNTER TOPS.—R. VIGERS, TIMBER MERCHANT, Kennington, Surrey, solicits the attention of builders and shop-fitters to his carefully selected MAHOGANY, suitable for Counter Tops, and to his seasoned Materials for builders, cabinet and bedstead makers, &c. Delivered, cartage free, to any of the London railway stations, or within three miles from Kennington Church.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark Bridge Wharf, Bankside.

TO BUILDERS, CARPENTERS, &c.
SAMUEL CROWHURST, Jun. begs to call the attention of Builders, Cabinetmakers, &c. to his Stock of seasoned and well-assorted Timber Goods, Deals, and Mahogany, in Logs, Planks, Boards, &c. at prices which will be found equal if not less than any advertised. Country Builders supplied on the most liberal terms. Timber-yard, Hanover-street, Walworth; and 1 Francis street, Newington, near the Church

CHIEF OFFICE:
QUEEN-STREET-PLACE, NEW CANNON-STREET, LONDON.
The united annual incomes exceed 27,000l.; and all Profits belong to the Assured.
LIFE
The next division of Profits will include parties assuring before the 24th March next.
The new business of the last eight months exceeds 5,000l. in Annual Premiums.
FIRE
The Guarantee Fund is being increased to Half-a-Million.
The annual income, since last annual meeting, has increased beyond 2,000l. GEORGE CRUMING, Manager.
N.B.—Agents are still wanted for some vacant localities.

SIXTH BONUS
UNION ASSURANCE SOCIETY.—(FIRE LIFE ANNUITIES.)
Instituted in the reign of Queen Anne, A.D. 1714.
Cornhill, and 70, Baker street, London.
Chairman—J. Remington Mills, esq.
Deputy-Chairman—Henry Aldwin Baines, esq.

James Bentley, esq.	John Payuter, esq.
Thomas Bodley, esq.	John Rogers, esq.
Daniell Britten, esq.	Henry Rutt, esq.
Nicholas Charrington, esq.	George Spencer Smith, esq.
R. Preston Child, esq.	Richd Horsman Solly, esq.
William Phipps, esq.	W. Chaplin Tite, esq.
Thomas Mills, esq. M.P.	Samuel Wilson, esq. Ald.
John Morley, esq.	Septimus Wilson, esq.

The LIFE BONUS of the year 1855, of four fifths of the profits of the LIFE DEPARTMENT, has been just declared, and (with the exception of a reserve of nearly 20,000l. to accumulate towards the next Bonus of 1862), is payable upon and with the sum insured, being at the rate of 16l. 10s. per cent. for the last seven years, on Policies effected in Great Britain upon the Profit System.
THIS BONUS MAY BE APPLIED EITHER
By having the annual premium reduced for the next seven years, which will in many cases extinguish the same for that period;
Or by adding the amount to the sum insured;
Or the value thereof may be received immediately in money.
The Directors beg to state that, by a recent change in the regulations of this Society, the assured realize the advantages of MUTUAL OFFICES by sharing the entire profits less one-fifth as a small compensation for the necessary guarantees, and are free from the liability incurred by the members of such Societies.
The accumulated invested capital now amounts to upwards of ONE MILLION sterling.

2, DOWGATE-HILL, LONDON.

CANAL BOATS.—TO BE SOLD, a pair of good strong BOATS, well adapted for coal or stone trade.—Apply to Mr. WALNE, Macclesfield-street, City-road Basin.

FERGUSSON'S
HISTORY OF ARCHITECTURE.

This day, with 850 Illustrations on Wood, 1,000 pp. 2 Vols. 8vo. 36s.

THE ILLUSTRATED HANDBOOK OF ARCHITECTURE.

Being a concise and popular account of the different styles of Architecture prevailing in all ages and countries.

By JAMES FERGUSSON, M.R.I.B.A.

Author of "Palaces of Nineveh and Persepolis Restored."

"We needed a manual which should give us a succinct account of all the principal buildings of the world; which should be intelligible to the general reader, and yet informing to the professional artist; which should be profusely illustrated with specimens of all the styles known to have existed; which should set free the great models locked up in splendid monographies, and condense the information displayed at length in the costly and cumbersome tomes of architectural libraries. We needed what the present volume purports to be, a 'Handbook' of architecture, and, when we find that it answers perfectly its intended purpose, we trent it as a valuable and welcome addition to our current literature."—*Times.*

"Mr. Fergusson's qualifications for writing a book such as that before us, are many and important. He has visited many countries, and he speaks with the weight of personal knowledge. With nothing approaching to eloquence, he succeeds in making his subject impressive and interesting to a high degree."—*Spectator.*

"By the help of this book every intelligent reader may not only amuse himself, but, without much cost of pains or study, very usefully extend the borders of his education. To most people the acquisition of the information it contains will be the conquest of a new province of knowledge to the mind. The whole book is a special narrative throwing a side light upon the history of civilization, and is so written as to combine, with the accuracy demanded by the professional reader, much of the lively skill required to fix the interest of men who read only to gratify their tastes and stretch their powers of enjoyment."—*Examiner.*

"Mr. Fergusson's book will remain a lasting monument of his genius, taste, and perseverance, and no lover or student of the art he has served so well can afford to dispense with its assistance. Owing to the nature of the subject, books that treat of architecture are generally large and costly in their production. Mr. Fergusson's object is to remedy, to some extent, these inconveniences, by condensing within the compass of two small volumes the essence of the information contained in the costly and ponderous works of the architectural library. The general reader, or the student of architecture, will find Mr. Fergusson's book an admirable guide to the knowledge of this noble art."—*Morning Post.*

"Fortunately, the task of supplying a long felt void has fallen upon one who has already shown himself no mere compiler, but a man of bold and original views.

"Among the illustrations occur a large series of plans of mediæval cathedrals, singularly well selected, and most of them, like those in the first volume, engraved upon a uniform scale of 50 feet to an inch—a precaution which augments immensely their comparative value to the architectural student."—*Saturday Review.*

"This is a very instructive work, and throws great light upon a vast and very important subject. Although anarchy prevails and has long prevailed in the practice of architecture in this and most other countries, yet the spirit of inquiry has set in respecting the true scope of the primitive art; and so copious and carefully arranged a store of information as these volumes yield upon the subject, will go far not only to satisfy general curiosity, but also to afford positive help to the earnest student. It is the best manual of the history of the art during the periods over which it extends with which we are acquainted."—*Daily News.*

"Seldom as works of this description realize expectation, this does so in an eminent degree. We have here, in two portable volumes, a truly rich manual of architecture. Illustrated works pertaining to this science are generally very large and proportionately expensive, so as to prevent most persons from enjoying them. Indeed, to use them for purposes of comparison in a small library or drawing room, where the subject might be studied as a fine art, seems almost impossible, for who can find space to have two or more of these leviathans abroad at the same time? All these difficulties Mr. Fergusson has kindly removed for us. Every page affords some practical architectural subject, and plans and sections seem only introduced to make the pictorial still more intelligible."—*Athenæum.*

"A publication of no ordinary importance and interest. It fills up a void in our literature, which, with the hundreds of volumes we possess on the science, had never before been precisely attempted; and it fills it up with learning and with ability. The latter, Mr. Fergusson has amply manifested in his previous writings. The result is the present two volumes, with a magnificent apparatus of 850 woodcuts, comprising plans, elevations, sections, perspectives, and details."—*The Ecclesiologist.*

"Though not of imposing size, Mr. Fergusson's book has legitimate claims to be considered a great work. It is the result of long labour and original observation. It contains a copious notice of every well-marked style of architecture known to exist; and the descriptive matter is illustrated by 850 wood-engravings (most of them drawn to a scale), showing examples of the various styles described in the text. The work is complete as an outline history of the art. We cannot speak too highly of the clearness and accuracy of the wood-engravings. They go far of themselves to form an architectural library."—*Press.*

JOHN MURRAY, Albemarle-street.

Third Edition.
THE BUILDER'S FRIEND,
Price One Shilling,
Office of "The Builder," and of all Booksellers.

New Edition, in 8vo. with Plate and Woodcuts, price 10s 6d.
RESEARCHES on LIGHT in its CHEMICAL RELATIONS; embracing a Consideration of all the Photographic Processes.
By ROBERT HUNT, F.R.S.
Professor of Physics in the Metropolitan School of Science.
Second Edition, thoroughly revised, with extensive Additions.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

In fcap 8vo price 10s cach, cloths; 12s 6d roans; or 15s 6d calf.

New Edition, in 2 vols. 8vo. with numerous Woodcuts, price 3l. 12s. cloth; or separately, Vol. I. 28s.; Vol. II. Part I. 21s.; Part II. 14s.
PEREIRA'S ELEMENTS of MATERIA MEDICA and THERAPEUTICS. New Edition.
Edited by ALFRED S. TAYLOR, M.D. &c. and
G. OWEN REES, M.D. &c.
*** In this work will be found a full account of all the Poisons, their Symptoms, Cases, and Effects.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW VOLUME OF DE LA RIVE'S WORK ON ELECTRICITY.
Now ready, Vol. II. in 8vo. with Woodcuts, price 28s.
A TREATISE on ELECTRICITY, in Theory and Practice
By A. DE LA RIVE, late Professor in the Academy of Geneva.
Vol. I. price 28s. may still be had.
"It is emphatically a treatise, containing both the theoretical and practical aspects of the science; and is so clearly written that even the tyro may make it his introduction to electricity while the most accomplished electrician will find it an invaluable summary."—*Leader.*
"This will be a standard work on electricity when completed.... To all who desire to have an acquaintance with the recent ideas and experiments of electricians, and with the theory and practice of electricity generally, this is one of the most valuable as well as most recent sources which they can consult."—*Builder.*
"From such a life we are entitled to expect noble results—from such a man we anticipate masterly works; and masterly indeed is the 'Treatise' now before us, in which is expounded the whole of what European zeal and genius have discovered up to the present time in the vast and difficult science of electricity. It was De la Rive's original intention to complete the work in two volumes; but although this second volume contains upwards of 900 compact pages, a third has been found necessary to complete his design. Nor will any one who cares to pass about the book regret this extension.... for here we have a work which is exhaustive, not because the writer is diffuse, but because his knowledge is exhaustive—and because he well understands the art of condensation, but because his manner of exposition and his matter is abundant. The pages are as full of pure essence as they can be packed, they are free cut with black verbiage, irrelevant digressions, or unnecessary details.... Altogether, we can name no work so eminently adapted to the wants of the student, and to the instruction of the amateur."—*Saturday Review.*
London: LONGMAN, BROWN, GREEN, and LONGMANS.

New Edition in 4to with 31 Plates and 130 Woodcuts, 42s.
A TREATISE on the STEAM-ENGINE, in its Application to Mines, Mills, Steam Navigation, and Railways. By the ARTISAN CLUB.
Edited by JOHN BOURNE, C.E.
Author of "A Treatise on the Screw Propeller," price 38s; and of a "Catechism of the Steam-Engine," of which a thoroughly revised Edition is nearly ready.
"The great merit of the present work is the vast quantity of information which it affords as to details of construction. In this respect it seems unrivalled, and contains a perfect store of invaluable facts."—*Civil Engineer and Architect's Journal.*
London: LONGMAN, BROWN, GREEN, and LONGMANS.

DR. WEST ON CHILDREN'S DISEASES.
The Third Edition, in One Volume 8vo. price 16s.
LECTURES on the DISEASES of INFANCY and CHILDHOOD.
By CHARLES WEST, M.D.
Physician to the Hospital for Sick Children, and Physician Accoucheur to Saint Bartholomew's Hospital.
The Third Edition, revised throughout and enlarged.

LETT'S WHARF PATENT SAWING, PLANING, and VENEER-CUTTING MILLS, Commercial road, Lambeth. The proprietors beg to announce to the trade that they have completed their extensive arrangements, and will be happy to execute all orders intrusted to their care with despatch and punctuality.
N.B. All goods sawn at these mills fetched and delivered free of charge.

The Builder.

Vol. XIV.—No. 682.

THE cemetery of the London Necropolis Company, situated on the line of the South-Western Railway, beyond Woking, will be the means of future great benefit to the metropolis. We have before this mentioned the establishment of the cemetery; but would further assist in making its advantages felt. First, however, a few words as to the present position of the all-important Burial Question.

Although changes in the practice of sepulture have been already made, such as will effect amelioration in public health, circumstances which, from time to time, come to our knowledge—viewed with reference to conclusions long since matured and published—show that improvement has yet to be promoted in the popular apprehension of this great question,—towards measures of a sanitary nature not yet in practical operation, and to realise the full social and moral bearings of the subject. We are not about to compare all the conclusions from Mr. Walker's long, serviceable, and unrewarded labours, or every page of the Report on the "Practice of Interment in Towns," by Mr. Chadwick, dated in 1843, with what Government has ventured to do, or to require. Our main object is rather to examine into the capabilities of the Necropolis Company, and of their cemetery,—though with reference to the most advanced opinions upon the question of burials—as to the necessities of London.

Few things appertaining to custom and habit, can be more difficult to regulate than the practice of interments,—at least in this country. Some of the most valuable suggestions and statistics before us, have been drawn from towns on the continent; and as to the provision of houses of reception for the dead, and in the prevention of extortionate charges—swelled by useless, if not objectionable forms of ceremonial—the English despotism of prejudice still withholds measures of sanitary and moral necessity, of which the value has long been seen in Frankfort, Munich, and other capitals. How much of the idea of "reverence for the dead"—supposed here to prevail, and there to be wanting—is purchased at a cost which makes any salutary influence impossible, little study of the subject is required to tell us; how much of life-destruction and moral degradation has been retained, our readers should sadly know.

All this, to the credit of individuals, and, indeed, of recent ministries, has been understood by them. Yet, slight allusion to matters fresh in recollection, would be required to show the difficulty which there is in imposing regulations. The Report above referred to, embodies the results of laborious researches into every branch of the question; and, with the aid of later documents, these conclusions should be obvious to every educated and observant mind,—namely, that the practice of burying in the close vicinity of dwellings is inevitably destructive to the sanitary welfare of the living; that—in all cemeteries—situation; character of soil, and its drainage; proportion of earth to each corpse interred; planting; and the provision of appropriate and beautiful works of nature and art, are each to be attended to; that the decomposition of corpses—though with the *minimum* of injurious exhalation—is to be promoted rather than checked; and that leaden coffins, family graves, brick graves, and "vaults," or *catacombs*, should be disused; that the retention of the body before interment, for a long period, is fraught with injury to health—especially in the single rooms or confined habitations which furnish the bulk of mortality—and in such cases, in addition, either occasions unnecessary and dangerous effects mentally upon survivors, or, more frequently, is also morally degrading and brutalising; that the customary ceremonial at funerals, and the extortion to which all classes are victims, make up a sum of expense which adds to or occasions many of the before-mentioned evils, and brings ruin upon widows and orphans; whilst, for the object of the verification of the fact of death—a thing shown by authenticated cases of suspended animation to be required, as well as for detection of causes of death in certain cases—public receptacles would generally present advantages. How far have these conclusions been at this day accepted, and practically carried out?

If you say that the pestiferous character of grave-yard exhalations is universally admitted,—and that we waste time by allusion to so trite a subject—we remind you that the other day, a dignitary of the church, seemingly disposed to throw difficulties in the way of the consecration of a cemetery, could express his belief that the neighbourhood of a grave-yard was rather beneficial than otherwise,—although, as long ago as the year of grace 1843 aforesaid, the shreds of argument as to the harmlessness of the effluvia had been scattered to the winds. If you believe that all else is now plain and admitted, certain further awkward facts present themselves.

The several Acts of Parliament that are in force, have not been passed without much of the "tinkering legislation" which has at last cried out within the walls of St. Stephen's itself, for reformation. Mr. T. Baker, of the Burials' Acts Office, in Old Palace-yard; and Mr. J. J. Scott, have each published a work, in which the Acts are "consolidated."* It is here seen that there are some important exceptions specified to the operation of the Acts. There are also some omissions which will have to be rectified this year.

The provisions in, or arising out of the Acts, which are most important to the community (independently of the clauses providing for the closure of old burial-grounds, and which take effect by Orders in Council), are the Home Office "Regulations," made in pursuance of the Act, "for conducting Interments in Burial-grounds provided under the Burial Acts 15 and 16 Vict. c. 85, and 16 and 17 Vict. c. 134;" and the "Instructions for Burial Boards in providing cemeteries, and making their Arrangements for Interments,"† approved by the Secretary of State.

Now, it will be recollected that these excited some animadversion; and we are perhaps not going too far to say that they were hailed as intolerable interference with the liberty of the subject. Yet they were and are rather behind the conclusions of experience. For, in defiance of the conclusions—or rather, in deference to popular prejudice—the "Regulations" recognise the practice of interring more than one body in a grave—as in the case of families. They allow of the use of vaults, provided "the corpse be enclosed in an air-tight metallic coffin;" though it had been in evidence in 1843, that such coffins could not be considered as necessarily "air-tight," having frequently to be *tapped* even before leaving the house where the death occurred.

Looking through the "Instructions," we find further inconsistencies, or deference to prejudice, therein, or shown to exist in the Acts. Cemeteries are not to be established where buildings are in progress or contemplated; and the law requires that a distance of 100 yards shall be kept from any existing dwelling-house, without there be the consent of the owner, lessee, and occupier. It is surely, then, an inconsistency to allow houses themselves to approach; or for any extra ground taken, to be let by the parochial board for building purposes, as is proposed in the case of the cemetery of St. Pancras. The "disposition to erect houses in the vicinity of ornamental cemeteries" prevails amongst those who have not made themselves acquainted with the evidence published, of the extraordinary distance to which the pollution of the ground may in certain cases be extended. Something more stringent would seem to be required than the mere *advice*, to leave "a space a few feet or yards in width, according to the size of the cemetery," between its "fence and the nearest graves." The truth is, that the sites of some of the cemeteries recently formed for metropolitan parishes, are so near to the suburbs as to be quite opposed to the spirit of the "Instructions." Again, with reference to family graves; whilst the "Instructions" say that "a fundamental principle of interments is, that no more than one body be buried in any grave at one time," and state that there are towns and districts even in England, where from "time immemorial" it has been "the custom never to re-open a grave which has been buried in;" whilst it is shown that the placing of coffins one over another, greatly prolongs the decomposition which is required; and whilst the "Instructions" also suggest that burial boards might dispose of *plots* of ground for families, with grave spaces to be used alternately, according with the system of the cemetery at Frankfort,—they feel compelled by the prejudices to which we have referred, to permit *exceptions* in favour of family vaults and graves. The Woking Company also are under no restriction in this particular, and allow several interments in a grave in the case of families, as well as the use of brick graves and vaults, and of other graves which, being of "extra depth," would seem to be likewise contrary to the best opinions. Again, the "Instructions," approved by the Secretary of State, say, that the use of monuments and flat stones covering the grave should be discouraged,—as tending to retard decay for nearly three times the period that would be requisite if the grave were covered with turf and planted: but they equally hesitate to impose any restrictions in that particular. The different proposals for removal and reception of the dead, are merely referred to in the manner of suggestion. Reception-houses were originally contemplated by the Woking Company: but an outcry was raised by the people of Lambeth; and, in deference to this, a clause stands in the Company's Act, forbidding them to retain any corpse at the London station during longer than twenty-four hours. The means which they can afford of carrying out what, under proper regulations, and with efficient structural contrivances, would be an important sanitary improvement, are therefore limited to the power allowed them of transferring bodies to Woking, and retaining them there—when desired by relatives—till the day of funeral; and this arrangement has been found to be preferred to the retention of the body, even by persons not residing in confined habitations.

The discrepancy of recognised principles and allowed practice is scarcely to be wondered at, when we regard the extraordinary nature of the case to which restrictions had to be applied. It is not only between *countries*, that customs in the rites of sepulture are at variance: there

* "The Laws relating to Burials in England and Wales, including 15 and 16 Vict. cap. 85; 16 and 17 Vict. cap. 134; 17 and 18 Vict. cap. 87; and 18 and 19 Vict. cap. 79 and cap. 128; with Notes, Forms, and Practical Instructions." By T. Baker, Barrister-at-Law. Maxwell.

"Burials Acts, Metropolitan and Provincial, 1852, 1853, and 1854; with the Incorporated Clauses from the Cemeteries' Clauses Act, 1847, &c. &c.; and explanatory analytical Abstract of the various provisions of the several Statutes. Fifth edition: to which are now added, the Burial Acts of 1855, 18 and 19 Vict. cap. 79, and 18 and 19 Vict. cap. 128; with an Introductory Abstract of their Provisions, and of the Alterations effected thereby in the existing Laws relating to Burials." By James J. Scott, Barrister-at-Law. Knight and Co.

† Printed for her Majesty's Stationery Office. 1854.

are singular differences between the several parts of the United Kingdom, and even between town and town. What would be "customary" in one place, would be but "maimed rites," or the height of impropriety, in other localities. Therefore, the moment that legislative or governmental restrictions are attempted, prejudices are raised, and on the most difficult of all subjects. The mode of transit by "the silent highway," or by canal, had advantages beyond what are available by railroad communication,—efficiently as it may be allowed, this means of conveyance is managed by the Necropolis Company. Plans for the different vessels and carriages were at one time got ready for the Board of Health: difficulties, however, presented themselves as to reaching one chosen site, arising from the crowded state of "the Pool:" and still more serious difficulties were perceived in the cost of property sufficient for embarking places at the river-side, and for the necessary street improvements adjacent,—which would have had to be paid for out of increased *rates*.

We may state as the result of careful inspection of the station at the Westminster-road, and of the cemetery itself, together with the arrangements observed at both places, that we discover nothing which does not present an improvement upon the system of the London suburban cemeteries, even greater than these were supposed to effect upon the older grave-yards. Every pauper grave is allowed to hold but a single corpse during the estimated period of decay; or, rather, no grave can be re-opened "except at the request of the friends of the deceased previously interred, for a space of ten years." The charges for the first four of the five or six classes of burials as conducted by the company, include the grave "in perpetuity."

At this juncture, that such advantages are available, might indeed be regarded as of singular importance, were the actual condition of London understood. In the chief suburban cemeteries, specially exempted from the operation of the Acts, the practice of "pit burial" continues: and practices—such as the keeping graves open—most injurious to public health, are maintained—as in the Victoria-park Cemetery—(or were so, quite recently),—though the sites are already, or will shortly be, surrounded by houses. At Abney-park, the unsuitable clay soil is said to crack, and emit vapours which are so offensive, that the letter-cutters on the grave-stones cannot work without precautions. It is therefore to be regretted, whilst the Acts were made not to impose discontinuance of burials "in any cemetery established under the authority of any Act of Parliament" (16 and 17 Vict. c. 134, s. 5),—the London cemeteries referred to being specially named in the schedule of the earlier Act (15 and 16 Vict.)—that no power of *regulating* these should have been reserved. The omission will, however, be rectified: though it is not at present desired to close such grounds, or to get the power of *preventing* any burial in them. Indeed, in the case of the Victoria-park cemetery, the greater part of the ground has not been touched. The overcrowding of the other portion can be due only to desire of money-getting. However, notwithstanding the exemption, the medical inspectors attached to the Home Office, charge themselves with examination in such cases. But, Dr. Sutherland, who attended to the London district, has been some time in the Crimea; so that as the other inspectors are much occupied in the country, it is possible that the objectionable state of the London grounds has continued longer than it might have done. From a question and answer, on the 11th inst. in the House of Commons, it will have been seen that two or three of the old intramural graveyards are still open.* The sanction of the Home Office in those cases appeared to be made a matter of necessity, by the still unexplained postponement of the opening of the new ground for the City. The ground in Holborn, attached to St. Andrew's Church, now really closed, had been re-opened by taking advantage of the permission to continue the use of the ground of the same parish, in Gray's-inn-lane. The continuance of "pit-burial" at the West Brompton Cemetery was, we believe, an accident, arising out of the absence of the London inspector; and it was very promptly put a stop to. Besides the special cases already referred to, the only exceptions to the complete disuse of London burial-grounds, were in some few cases where one burial in each grave is permitted, till the space is thus filled; in the case of Trinity Church, Brompton, where one burial in each grave is allowed to 1st October, 1859; in the case of St. Mark's Cemetery, Camden-town, to be closed on 1st May next; St. Dunstan's, Stepney, on 24th October next; and All Saints' ground, at Poplar, on 1st May next. There are, however, the important exceptions to the cases of closed grounds, of "existing rights," "private vaults," and private graves;" whilst from West Hackney, there is "no return." These "exceptions," so long as they exist, would justify apprehension—in some degree. The removal of bodies by relatives to new resting-places, practised lately in many cases—as indeed to the cemetery at Woking—is considered to be highly dangerous, and is to be put a stop to during the present session. Mr. Simon, the late medical officer to the City of London, in 1848-9 appeared to report an opposite opinion, as to the danger relatively, of the two courses.

The parishes which now inter in the Necropolis at Woking, are those of St. Giles, Bloomsbury; St. George, Bloomsbury; St. Luke, Chelsea; St. Margaret, Westminster; St. John, Westminster; St. Saviour's, Southwark; St. Olave, Southwark; Bermondsey parish; Chiswick; and St. Paul and St. Nicholas, Deptford: ground has been allotted to St. Anne's Soho, and St. George's in the East; and arrangements are in progress with other parishes. No difference, we are told, is made in the ceremonial between funerals of the better class and those of paupers: the latter are what we can speak to, and they are performed in a very proper manner. The guild of St. Alban, an association of lay members of the English Church, having, as one of their objects, the systematic performance of pious and charitable works, and holding the Christian burial of poor Church people to be especially incumbent on them, also inter at Woking, where a pall and other matters of the kind for the common use are carried with the corpse. The system of the Necropolis Company, we are told, has rendered evident that there is a desire, where it can be done, to dispense with much of the unmeaning frippery of the street procession.

The London station is a building in three stories, the top story being that which is on a level with the line of the South-Western Railway; with which there is a communication from the Necropolis Company's Station, by a short branch. Below, there are two entrances from the public streets: one from the Westminster-bridge-road, by an arch of Norman character, in ornamental red brick and tile work, and the other from the Cornwall-road. The gates, of elaborate workmanship, by Messrs. Bailey, like the ironwork elsewhere which plays an important part in the effect, are of excellent character. The principal gates were exhibited in 1851. On passing along the carriage-way, a neighbouring slaughter-house is so offensive, that it must be productive of some unfounded prejudice against the company's arrangements. The principal portion of the lower floor is occupied by a large room—including also the height of the floor above—used for depositing the bodies till the time of departure of the train. Pause before that black box, made of rough and splintered boards, badly nailed together. Ere this you have looked on death in some shape, and haply not without awe, and other vague and undefinable emotion; and now, not with indifference, or without much self-communing, you seem almost to discern the poor form of the mortal *found drowned*, cased in that "narrow cell," whereon you read this inscription chalked on the lid,—

"*A Female Unknown.*"

Turn to the coffin of a different class, of which the "ornamented plate of inscription, four pair shield handles, and japanned and burnished nails,"—as usual in this class of "ornaments"—seem to conjoin the vanity of show with the utmost abasement of mockery and pretence; and marvel that the vices which find expression in our *art* should be cherished even to the grave. The furniture of our last resting-place should be at least truthful—claiming to be no more than it is. The room we are in—like others in the building—is well ventilated by large panels of perforated zinc; the different channels communicating with a tall shaft, in which means of exhaustion are provided. The coffins are raised by lifts, worked by a steam-engine of six-horse power. There is a principal staircase of good architectural character, lighted from the top, and a separate staircase for the mourners of the pauper class. In the one-pair story, two large spaces are appropriated as waiting-rooms for the male and female mourners of the class last mentioned; and to these, closets and lavatories are provided. Smaller waiting-rooms, each with similar conveniences, and appropriately furnished, are provided for funerals of the "artizan" and next superior classes. On the top floor, the principal waiting-rooms are two for the first-class funeral parties—one on each side of the staircase. Each has an adjoining apartment for closets and lavatories. The provision made in these last particulars may have appeared great; but the usual railway-station system of separate waiting-rooms (that is to say, allowing one for ladies) is required, in fact, for each funeral party. In this view of the case the plan is faulty. The ground taken up is indeed quite inadequate,—shelving off, so as to have for great part of the length very slight depth. The practical effect of the arrangement is at present this:—When the number of funerals in one morning is small, different members of a party are too widely separated: as (in the case of there being *one* first-class funeral) across a public staircase. On the other hand, where the number is greater, for some of the parties there can be no separate ladies' room. A very large station, it may be said, would be required, and great expense in the fittings: but the want of this, if the Woking Cemetery is to be used as much as we hope it will be, will be attended with serious inconvenience. It must be recollected that "separate apartments" for each party of mourners, are offered in the Company's prospectuses. Even with the present area of ground, the arrangement might, we should think, have been better; and the positions of some of the doors of the closets in the second-class rooms are to be altered. A plan having a considerable number of small rooms—capable of being thrown together on the arrival of larger parties than usual—would be found most suitable. In the temporary buildings at Woking, the deficiencies referred to are rather greater than in London; but there, there are female attendants attached to the refreshment department. In other respects, the arrangements of the London station seem unexceptionable,—the moving of the coffins and starting of the train being carefully and noiselessly conducted. The railway, within the terminus (roofed over, on the ridge and valley system), is carried by deep girders above the carriage-way of entrance, which last receives its light from the spaces between the lines, those being filled in with glass slabs. The architecture of the building, next the departure platform, is expressed in good plain brickwork, with arch-headed apertures. A globe gas-light is in the centre of each of these—supported in the case of the windows by an ornamental ironwork standard. The coffins, on reaching the platform, are placed each in a separate compartment, made for the purpose with strong straps to prevent displacement by the motion of the train. The hearses, fitted with these compartments, are of two kinds, differing, however, very slightly, and are similar externally to the ordinary parcels' van, though with several doors, and a more finished appearance. The carriages are the ordinary ones, supplied by the South-Western Company, which, in regard to the second-class, plastered with advertisements, may by some be deemed objectionable. The train proceeds along the South-Western Railway to the branch line leading into the cemetery, which we reach in less than an hour without discovering any difference between our journey and one by an ordinary train, except that we have made no stoppage till we reached the junction. The distance from the Waterloo Station is 24½ miles. We descend at the station near to the chapel

* What is meant by an obscurely-worded order in Council, in the *Gazette* of Tuesday last,—referring to postponement,—we have had no opportunity yet of ascertaining.

in the unconsecrated ground, whilst some of the coffins are removed; and the train which had descended the incline, is drawn on by horses to the consecrated ground some distance farther.

At the cemetery, we find much to interest us; and the particulars will afford matter for another article.

ROYAL INSTITUTE OF BRITISH ARCHITECTS.

Bells of the Royal Exchange.—The discussion on the subject of Bells was resumed and closed on the 11th ult. Mr. W. L. Baker, Mr. R. C. Nicols, Mr. Ashpitel, Mr. Foggo, Mr. Ferrey, Mr. Denison, Q.C. and Mr. Varley taking part in it. The chairman, at the close of it, spoke with regard to the failure of the Royal Exchange bells, over which he had no control. They had never succeeded in getting these bells in tune. There was a certain scale of notes which were intended to play tunes, and therefore should have been properly pitched. There was no particular necessity to study expense, and he had been anxious to get a good chime of bells. At Messrs. Mears's works, he found a rude system in operation, which appeared inconsistent with anything likely to ensure tune. He saw, indeed, that the whole matter was traditional; and he therefore suggested that bells so roughly cast could hardly be in tune; and he further proposed to put the series in a row, and by striking, ascertain whether the gamut could be produced. This trial, however, was declined. The machinery for the chimes was made by Mr. Dent, one of the most skilful mechanicians in the world; but as soon as they began to play, the effect was highly disagreeable. In fact, the peal was not in tune. Then came a series of suggestions, such as "the hammer strikes too hard;" but as Mr. Dent said, it was easy to make it strike softer, by merely shortening the lever. The architect and the tower were in fault; indeed, it was anything but the bells; but in fact the tower contained a large square chamber, with four large windows filled with louvres, &c. He even offered to take the louvres away. At last it was agreed to take down the bells, and re-cast them of a larger size, and with two additional bells; but the new bells failed. It was plain that the makers had no rule; yet they produced testimonials without number, and engaged that the bells should be in tune to the satisfaction of Mr. Edward Taylor, Gresham Professor. At first they insisted that the bells were in tune, but Mr. Taylor tested them with a violin to show that there could be no possible mistake. The bells were chipped, cut and altered in every way without success, and he (the chairman) never could get people to believe that *tone* was not *tune*. Mr. Taylor, of Loughborough, re-cast the bells, but without success, and he believed the chimes remained a failure. He had found in an old manuscript an illumination showing a man grinding bells, and he believed that the ancients in fact turned the inside of their bells in an accurate form with regard to the outside, according to some rule now lost. He believed that the same law or mathematical process by which he had seen Erard set out the top of a harp, might be applied to a bell, so as to conduce to its accurate tuning in any particular note. He had heard the traditional story that the founder of the tenor bell of Bow Church never left it, but was always filing or hammering the inside till he got it to the proper note or pitch of the C of that time. The chairman further observed that a letter had appeared in the *Times* stating that the Westminster bell could not be got into the clock-tower, as Sir Charles Barry had forgotten to provide an access for it. It was due to Sir Charles Barry to state that this was not correct. He had not forgotten the matter, nor was there any difficulty in it; neither would it cost 3,000*l.* to erect a scaffold to raise the bell. The meeting was aware that the whole of one side of the lower story of the clock-tower facing west, consisted of a large arch, which had been filled up with brickwork; the bell would be brought up to the arch, and so much of the brickwork removed as might be necessary, and the bell would then be raised without any difficulty whatever.

The Chairman then adverted to and explained some of his remarks made at the opening of the session. His observations will be found below under another heading, for the sake of reference hereafter.

At a meeting on the 25th ult. a letter from Mr. G. G. Scott, in reply to Mr. Tite's previous observations, and the production of which had been delayed, was read. This we also give *in extenso*. M. Viollet le Duc, architect, of Paris, was elected honorary and corresponding member; and a paper, entitled, "Archæological Studies in Jerusalem," was read by Mr. G. J. Wigley, associate.

The Diploma Question.—The Council have come to the following resolution on this subject:—"That the Council feel that it is as yet premature to pronounce an opinion upon a subject of so great importance as the establishment of an examination with reference to granting a diploma in architecture. That before they could recommend the Institute to undertake such a charge, it would be necessary carefully to ascertain the opinion of members of the profession generally. They moreover feel that the duty which has been recently intrusted to the Institute by the Legislature, viz. the examination of the candidates for the office of district surveyor, will enable them, after a sufficient experience of such examinations, to come to a sounder judgment than they can at present on the subject of the diploma." It appears to us that they have adopted the right course.

The ensuing Election of Officers.—Mr. Scoles, the senior hon. secretary of the Institute, having expressed his intention to retire from that office, the duties of which he has fulfilled for many years, the profession will be glad to learn that Mr. Digby Wyatt, at the request of some of the leading members, has consented to allow himself to be put in nomination at the election in May. The many qualifications of Mr. Wyatt, both literary and professional, and the earnest and continuous attention which Mr. C. C. Nelson bestows upon the affairs of the Institute (devoting to it indeed a large portion of his time), give promise of increased usefulness and of an active development of the resources of this body, for promoting the best interests of architecture and the profession in general. Mr. Scoles has earned the best thanks of the Institute by his attention and unfailing urbanity. We have since been asked to say that Mr. Papworth has placed himself at the disposal of the body for election to the above office.

GOTHIC OR CLASSIC?

Mr. Tite said, at the meeting of the Institute to which we have already referred: I am anxious to put myself right with reference to some remarks which I made in the discussion on the diploma question, on the undue preference (in my opinion) given to mediæval architecture, and which remarks have been somewhat misunderstood. I was an early cultivator of mediæval architecture: I esteem it very highly, and I think I understand it; but all that I wanted to urge was that it was not reasonable to abandon the better styles of architecture (for many purposes) for what I considered the fashion of the day. That the study of classical architecture is neglected, is proved by the fact that there have been no competitors for the architectural medals of the Royal Academy, as stated by the Professor in a recent lecture. Now why is that? Surely because the young architects of the day are studying mediæval church architecture to the abandonment of other studies; and I presume, therefore, until the Academy can be induced to give a medal for a design in that style we shall have the same result. Such a state of things I greatly regret, because classical architecture gives us the best and most certain principles of feeling and thought in architecture. With regard to mediæval architecture, it is true we have become good copyists, but our forefathers did vastly more than this, for they urged on their thoughts and inventions,—they went on from excellence to excellence, and they often obtained it in the search after novelty. Young architects should study the principles of things, and apply them to expression, utility, and fitness in architecture. In the remarks to which I have referred, I found fault with the unfitness of modern mediæval churches for the purposes for which they were built. I quoted one which, although elegant and beautiful, was anything but a Protestant church. I stated, amongst other things, that on the south side of the deep chancel of that church there was a range of sedilia. Now of what Protestant use could they be? The rubric says the minister shall "stand on the north side of the altar;" and even among Roman Catholics they are obsolete. Such ornaments are not only useless but expensive, and inconsistent with the purposes to which the churches are applied. Then again I have seen lately, in two large squares near Belgrave-square, large masses of building in which classical architecture would have given a better church than those which have been built there. I allude to Warwick-square and Chester-square, composed of masses of regular Italian buildings; and, forming one side of each square, irregular Gothic churches with spires are placed, which appear to me incongruous and out of place: and inside they are not adapted to those vast congregations which frequent them. That these are the opinions of men as well able to judge as myself, is proved by the remark of Mr. Petit, the learned ecclesiologist. He says,*—"There are good reasons why we should rather make the best of our old churches, than materially alter them or destroy them, to build others in their room. The impression they are calculated to produce more than compensates for some inconvenience in their form or arrangement; but there seems no reason why we should ever plan or build a new church of an inconvenient form, or in any way unsuited to our own manner of worship. If, for instance, it is desirable that all the congregation should be within sight and hearing of the minister, why should a church ever be built in which a part of the congregation is hidden from him when he performs any part of the service in the usual place? And this must be the case in every church having aisles which terminate at the division between the nave and chancel. If we find that galleries are useful and convenient, why should we build churches that will not bear galleries, or to which they are a disfigurement? If we professedly adopt high-pitched roofs as suitable to our climate, why should we ever combine them in such a manner as to leave a lodgment for snow or rain? There may be difference of opinion as to the advantage of an unbroken area, or the expediency of galleries; still they serve my purpose in illustrating the proposition I would advance, which is, that an architect ought not to abandon a convenient arrangement on account of its ugliness, but rather try to get rid of the ugliness without giving up the convenience. If, then, a feeling that his first object is to make his building fully answer its primary purpose, and a determination that nothing shall be allowed to interfere with this object, be referrible to a spirit of utilitarianism, I conceive that so far, at least, an architect ought to be a utilitarian."

That is the opinion of a modern ecclesiologist of great learning and judgment; but I will quote also the opinion of Sir Christopher Wren. He was called upon to build the City churches, and he gives this opinion on the subject.† He says,—"Churchwardens may be careless in speedily repairing drips, but they will usually whitewash the church and set up their names, but neglect to preserve the roof over their heads." He next proceeds to discuss the capacity and dimensions of the proposed new churches, and a mode of calculation to determine them from the number of inhabitants for whom these churches were to be built, which he calculated at 400,000, or five times as many as were burnt out in the City. The churches, therefore, he says, must necessarily be large, and if they were built to hold 2,000 persons each, the accommodation would fall very short of the requisites; but, he adds, in our reformed religion it would seem vain to make a parish church larger than that all who are present can both hear and see the preacher. The Romanists indeed may build larger churches—it is enough if they hear the murmur of the mass and the elevation of the host; but ours should be fitted for auditories. He considered it to be hardly practicable to make a single room so capacious, with pews and galleries, as to hold above 2,000 persons, and all to hear the service, and both to hear distinctly and see the preacher. He endeavoured to effect these objects, he says, in building the parish church of St. James, West-

* *Vide* the *Builder*, January 26, 1856—Mr. Petit's address at the Architectural Exhibition.

† *Vide* Elmes's "Life of Wren," and the "Parentalia."

minster, which he presumed was the most capacious, with these qualifications, that had then been built; and yet at a solemn time when the church was much crowded, he could not discern from a gallery that 2,000 persons were present.

I was rather more urged to express the opinion I did, by not desiring to see classical architecture neglected merely in obedience to a present fashion. I believe that fashion will to a certain extent pass: I may be mistaken, but it appears to me that the universal application of mediæval architecture and forms is an error and a great mistake. I simply suggest that as my opinion; and I regret that that which formed so important and so necessary a subject of study in my early life should be at the present day neglected for something which, though beautiful in its way, has not so many claims upon our attention, and is not so well adapted to our forms of religious worship. I have no desire whatever in the least to interfere with the views of others; but those who choose to adopt these views conscientiously will find in me a man to think for myself. I am glad to have this public opportunity of saying a word upon this matter, because by one of our most eminent professors of architecture I have been a little misunderstood. I only offer this as a matter of explanation and not of discussion at the present moment.

The following is Mr. Scott's letter previously mentioned:—

In a society which supposes each of its members to hold his own individual opinion, and to express them freely as he pleases, it may appear unnecessary to notice mere manifestation of feelings which every one knows our respected friend entertains; but coming *ex cathedrâ* from the chair of our Institute, and from our parliamentary representative, they may, if unanswered, appear to acquire more weight than belongs to them, and be viewed not as the feelings of an individual member only, but as those of the Institute as a body; in which case it would naturally become the duty of those who hold contrary opinions to make a formal protest, or to separate themselves from the society.

Mr. Tite contented himself in his address at the preceding meeting with a general expression of regret that the love of Pointed architecture was becoming too exclusive, but with some compliments to its favourers on their success as compared with their fellow-labourers in France. He commences his second series of remarks with a somewhat stronger expression of his regret, especially that we do not keep ourselves to the buildings for which our style is suited. Warming as he proceeds, he accuses us of being mere blind copyists, incapable of thinking for ourselves, and winds up by showing that our style is unfit for any purposes at all, unless it be for Roman Catholic churches. Now, would it not have been better to have acknowledged this opinion at the outset? We can readily understand that the majority of those who were firmly grounded in the old state of things before our movement had made much progress, are likely to disapprove of what we are doing. It is so with every movement, whether in art, science, or politics: the movement party are invariably maligned and opposed by those whose prepossession they disturb. It is an understood thing, and no one wonders at or complains of it. Mr. Tite, however, takes a higher ground: he admits at first that, in some respects, and in some cases, we are right, and meets us on this ground, but at last winds up by denying that we are in the right anywhere, unless it be in Roman Catholic churches!

I will, however, crave your patience while I follow him into particulars. His first complaint is that our style is applied "to buildings for which Classical architecture is more fitted, such, for example, as town halls and markets." I rejoice to hear that there is such cause of complaint! *I* have long been complaining that it was *not* applied to such buildings, for which it seems to me so eminently adapted. Where, for instance, are finer town halls to be found than in the great mediæval cities of Germany and Flanders; and where better market houses than the *halles* of the Flemish towns? They are only too good and too noble for us; but surely a style which produced *them*, and which has produced equally appropriate buildings for the humblest purposes of trade and husbandry, will not fail in giving such modifications of its nobler conceptions as will meet our circumstances, whatever they may be. Only give us the chance, and I think we can show whether town-halls and markets are unsuited to our style.

Mr. Tite next complains that in building churches in towns we do not respect the style of the "elegant" houses adjoining. I sincerely wish we could say much for the elegance of our town houses! They certainly carry out Lord Bacon's axiom. If they are built *to live in*, they assuredly are not generally built *to look at*; though it is the misery of our lot that we are hourly compelled to look at them! Be this, however, as it may; it is inherent on a period of change that such discordances of style should exist. The architects of the seventeenth century did not scruple to build in their own Renaissance style because surrounded by Gothic buildings: they even patched up the latter in their own style. No change would be made in anything were this principle to be admitted. It is simply the principle of obstruction, which comes ill from the chairman of an institute like ours, which professes to aim at progress.

If, however, our vice-president merely means that we build in our *towns* churches better suited to *rural* situations, I heartily join with him; but is this his own criticism? has he not, or might he not, have learned it from ourselves? I can refer him to able articles on the subject from the pens of leading members of our movement, in which he will find it impartially discussed, and our errors severely exposed. Surely, he will hardly venture to say that Gothic architecture is suited to the country, but unfit for towns!* that it is unsuited to be placed near houses 70 or 80 feet high! I confess I have never heard want of height quoted as one of the defects of Gothic architecture. I do not know whether he refers to the church in Gordon-square as being unfit for such a position, but if he will look out from the side of Hampstead-hill, he will find that this *alone* among all the churches of London (St. Paul's and Westminster Abbey only excepted) is seen rising predominantly over the house-tops, and is a conspicuous object without the aid of a tower. All that keeps us from raising our town churches above the "elegant" houses around them is *our poverty*; a hindrance which would apply equally to any style, excepting that a Gothic church would be vastly improved if we could afford to make it tower above our houses, while an Italian church would probably be thrown out of all proportion by the operation. Our misfortune is independent of our style. We are compelled to build *town* churches with *country* means, and are then laughed at for building country churches in our towns. If we had the funds which were expended a few years back on some of the worst of our "classical" churches, we should not dread the proximity of houses 70 or 80 feet high, nor fear to be accused of building churches only suited to the country. But even if we have in some cases deliberately fallen into the error (which I think has sometimes occurred), that has nothing to do with the style, for no one will accuse Gothic architecture of falling short of the *classical* in *loftiness*.

Mr. Tite then proceeds to compliment the builders of some of the great City warehouses, and further on imagines what some Gothic architect would have made of them. Has he ever seen the *noble* and almost *majestic* mediæval warehouses in some of the ancient German cities? A nobler type for buildings of their kind can hardly be conceived: they have rather too much roof for modern purposes, but are designed with a perfect appreciation of their use, and obtain their noble aspect solely from the simplicity and truthfulness with which their uses are provided for. Some of the finest warehouses I have seen in England and Scotland, built by persons who never thought about building in any style, but simply thought of doing *well* and *efficiently* what they were about, have struck me as having a strong family likeness to these stern and noble structures; and they certainly look better than the huge, over-corniced, though handsome, fronts in the city of London. It is curious that while Mr. Tite lauds our City warehouses in the same breath in which he speaks of the *small projection* in French street architecture, as showing that their architects lean "to the wants of the place and the times," Mr. Fowler very justly complains of their enormously projecting cornices as reducing, in narrow streets, the sky as seen from the street to one-half! He might also have animadverted on the *frightful danger* they incur.

After some very judicious remarks upon *fitness*, and on making a building suitable to its purpose, sentiments which, by the way, he will find admirably enlarged upon by Mr. Pugin in several of his works, and laid down as the key-note of Gothic as distinguished from *modern* architecture—Mr. Tite returns to churches, selecting one which he has seen in the neighbourhood of a manufacturing town as a beautiful piece of copying, but as failing in all its practical uses. Surely, however, he will not argue that the mistakes of an individual architect are to be taken as condemnatory of the style he happens to be working in; or what style would escape? "The congregation *could not hear*;" but is this usually the case with Gothic churches? The very reverse is more frequently the fact. Nor could they "*sit with comfort*;" but surely a seat may be made comfortable or uncomfortable in any style! There was "*no ventilation*;" but is Gothic architecture opposed to ventilation? The "*warming* was defective:" surely a few more hot-water pipes would not have marred the style! The clergyman *complained of the reading-desk*:" what clergyman does not complain of his reading-desk, whatever be the style? It is said that every new incumbent of every church wishes to inaugurate himself by moving the pulpit: then why not complain of his reading-desk? Let him alter it to his mind, and it will not, I dare say, be less "Gothic" than at present, or less like what it would have been in Edward III.'s time! "Indeed, the church is so inconvenient, that *the people would rather stay away than go to it*;" but this may be the fault of the people and the clergyman as much as of the church; yet after all this, the church is "far more beautiful than the architects and masons of Edward III.'s time *could have made it!!!*" Really this *is too* complimentary! What! more so than *Exeter cathedral*; than *St. Stephen's chapel*; than the west front of *York*; than all the churches of Lincolnshire, or the church of St. Ouen, or the *façade* of Rheims? If so, I do pity the taste of those who would rather stay away than go to it! I would willingly bear a little cold, or sit in an uncomfortable seat, for the luxury of seeing such a building!

Now I think I happen to know the church alluded to. It is, if I am right, a very nice, simply designed church. It is generally (it is true) in the form of an old church, but is absolutely free from slavish copyism: instead of being a most accurate and elegant imitation of the style of Edward III. it comes home to my recollection as a somewhat severely simple adaptation of that of Edward I. Instead of being far more elegant than the old people could have made it, all little elegancies of workmanship are carefully eschewed. It is rather ascetic than elegant in its character. Instead of being a specimen of "*identical copying*," and having "no ventilation," it has the novel feature of the clerestory devoted to newly constructed ventilators in lieu of windows. Its seats are unquestionably faulty, as much an exaggeration of *lowness* as the seats of thirty years back were of *height*; and the hot-water apparatus (whether or not from being constructed as a type of Edward III.'s days) does not answer. My own impression was, that this arose not from the style of the apparatus, but from the engineer having been chary of his pipes. There are possibly a few ritual affectations about the chancel which would be as well modified; things which usually depend more on the fancy of the clergyman than the architect, and certainly have nothing to do with the style; one thing, however, I observed, which I much liked—a large and cleverly-contrived recess in

* It is an unfortunate admission on the part of our opponents that Gothic architecture, while it harmonizes with the works of God, clashes so severely with the modern works of man.

the chancel for the organ, such as I have never seen in any church, ancient or modern, and which certainly did not strike me as a specimen of copying or of "*want of all thought.*" The clergyman, however, not only complains of his reading-desk, but of his pulpit. "Being made of stone, it is so cold he cannot put his hand upon it!" Did this ingenious priest never think of the expedient of lining the top with cloth or velvet, which is usual even with wood pulpits? Surely a pulpit may be made either of wood or stone, whatever be the style of the church! It is usual to give the clergyman his choice, and I generally find them choose stone, forgetful of their hands; and among old pulpits I think I have seen more stone or marble ones of the Renaissance than of the Mediæval periods, and I do not at this moment recollect any of the time of Edward III. The last complaint is described "as a most enormous mistake:" it is that the altar-rail only allows room for twelve communicants. It may be better to allow more, but if Mr. Tite will look into it at such a time, he will find that it really makes no practical difference, or very little, whether the rail be long or short, if the rule of the church be carried out of repeating the words prescribed to *each communicant*, or even to two together. If, however, the indecent custom be admitted of repeating them only to each "rail" of communicants, I admit that time is saved by making the rail long, but it is a custom more honoured in the breach than in the observance. Finally, however, we come to the "sweeping clause," which condemns all the forms of Gothic architecture as suited to the Roman Catholic religion and unsuited to our own; and on this ground, in Mr. Tite's *sincere opinion*, he thinks "the architecture which was learnt in Italy was much better suited than that now in fashion. So we are to go into Italy to learn Protestantism! The Popes then were sadly mistaken when they built St. Peter's. Little did they think they were erecting the type of Protestant architecture. I will not, however, follow out the subject: the fallacy of it is too obvious.

One word, however, on the subject of copyism. It is unquestionably one of the great vices of our day, and the more it is run down the better; but let us have fair play. *Laudari a laudato Viro*, is what we all desire; and we equally rebel against being blamed by those who wallow in the same mire with ourselves. Now, the classic architects have no kind of excuse for their copyism. They have been at work for three centuries, and yet too often work like schoolboys: not only every detail is most abjectly copied, but they actually scruple not at copying nearly whole buildings at a time! If we are copyists, we have learned to be so in their offices, where copying is, with some bright exceptions, the sum and substance of architecture. They use *now* the very arrangement of leaves they find in ancient capitals, excepting that they fail of their spirit: even the triglyphs and guttæ, the symbols of transition from wood to stone when the Dorians adopted the materials of the Pelasgi, they copy to this day with scrupulous accuracy, and learn with infinite pains their proper proportions in decimals of minutes! and yet they have the conscience to accuse us of copying, because while learning and reviving the long neglected arts of our native country, we do not at once strike out into new developments. We have had first to make ourselves masters of our grammar, but already we develope more, we copy infinitely less, than they do after three centuries of training. I am one of those who have been behind the scenes, and have been put through all the facings of classical practice; and, while I admire genuine classical architecture quite as much as our excellent vice-president (though I think another style more suitable to ourselves), I know too well the practice of modern classicism not to be fully aware that *ours*, with all its faults, is freedom itself compared with the copyism which preceded it. Our aim is *not to copy* but to *develope*, and to render our style the truthful expression of the wants and circumstances of our day; and to effect this great object will be the constant aim of,

Yours, &c.

GEO. GILBERT SCOTT.

SUGGESTIONS AS TO THE EAST.

THE East, the land of mystery, is now opened to us; and, if not too late, we would suggest several subjects of inquiry.

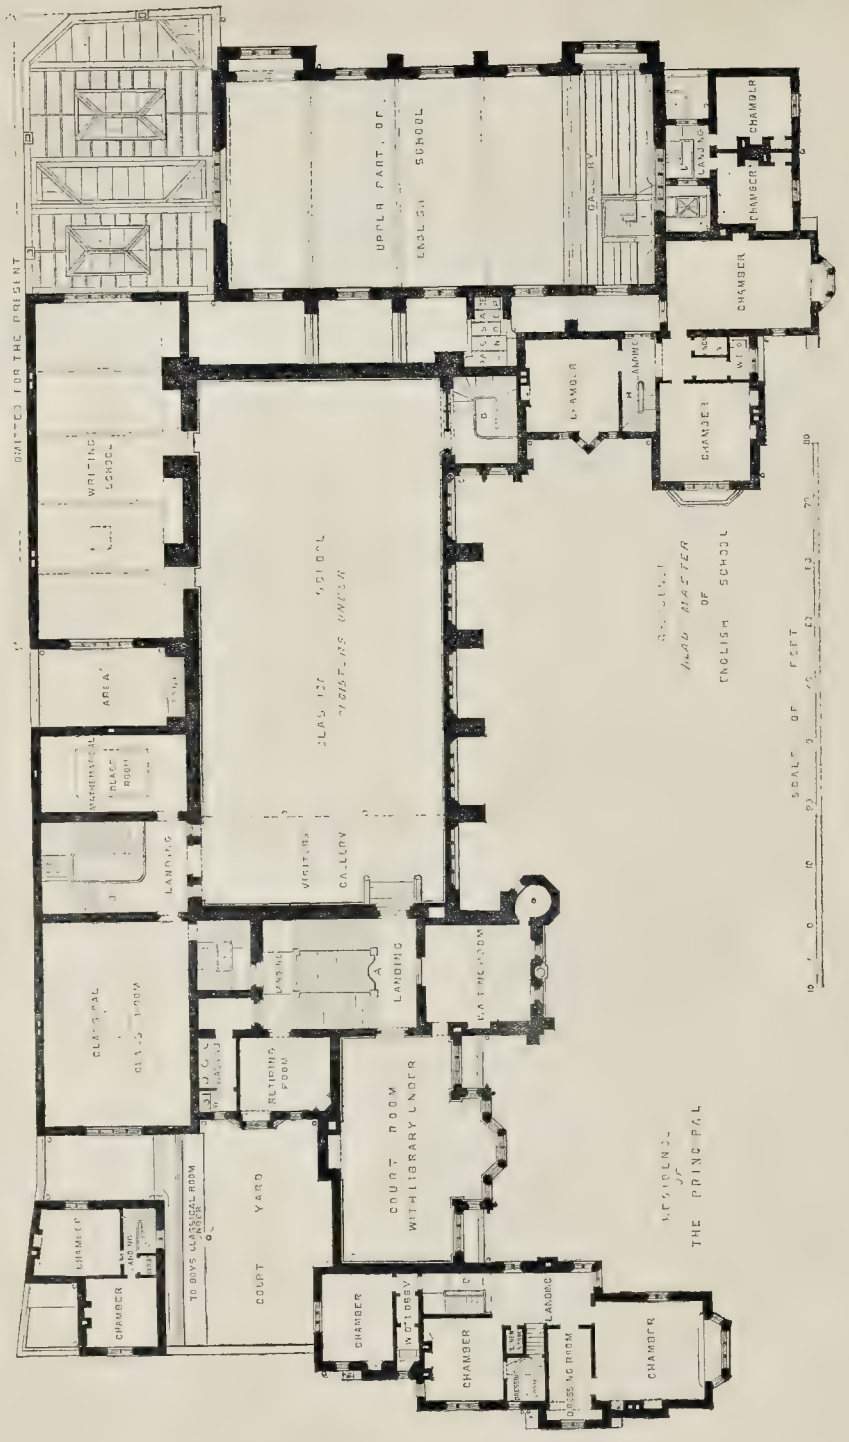
The geology of a country should be known in order to understand correctly the past and present history of a people. We therefore hope some competent person will inform us as to the order of stratification from the Dardanelles, and on throughout the whole extent of the Black Sea, and the adjoining portion of Asia Minor. The general features are known, but we wish for details. The Sea of Marmora, with its islands and shores of marble, declares the character of its geology in its name: something interesting may however be told as to the rocks found in contact with the marble beds, as also of the extent to which the marble quarries have been worked in times past, and are now worked. Then, as to the shores of the Bosphorus, and the foundations of Constantinople, how far does the clayslate extend, and the limestone beds found at Kulali? We know that coal is worked at Erekly, and Murray gives rather an odd account of the coal-beds, where he states;—"The coal-seams vary in inclination, the average being at an angle of about 30 deg. with the horizon. They crop out over the entire field on the sides of the mountain-ridges, 1,500 to 2,000 feet high, and are much broken by faults. *No evidence of volcanic action has been discovered.*" We have put this last paragraph in italics. It requires explanation. "Seams of coal" at "steep angles" and "mountain ridges" are evidence of "volcanic action," even without the "*faults.*"

The geology of Sinope, Samsoon, and Trebizonde may be correctly ascertained. We do know that much of this coast is oolitic; that the peninsula of Sinope is very like our own island of Portland, in size, in form, and in geology; and we also know that there are many traces of volcanic action, basaltic and other dykes having ruptured the strata. But no map that we have seen represents with any degree of accuracy this portion of Asia Minor. Spurs and ranges of mountains, from 3,000 to 7,000 feet high, can be seen from the deck of a vessel, having snow upon them in May, with the thermometer at 85 deg. in the shade. There is plenty of work for the geologist here. At Trebizonde, the celebrated 10,000 came out from their wanderings upon the sea. A correct knowledge of this country would raise our wonder at the marchings of ancient armies, and increase our admiration for the generals who commanded, and whose commissariat did not fail. The naturalist will find that the bees of this district continue to collect and store up "*mad honey*," as in the days when it proved fatal to the Greeks. We were told it is honey from the wild azalia. Georgia and Circassia present mountains, and, no doubt, minerals, we know little about. Then there is the Crimea: our return transports may bring home samples of the various rocks, and specimens of the fossils so abundant in the oolite and chalk. We should then have visible evidences of the rock cut through in the trenches, and of the fatal Crimean mud. The caves of Inkerman and the ruins of Sebastopol can yield trophies as interesting to science as broken muskets, or as disabled cannon are to national glory. Napoleon I. would not have neglected such hints. Napoleon III. and John Bull may probably "care for none of these things." What is John in his governing capacity? John Bull, the man of science, may think and act with more judgment. Pictorial *sketches* we have had,—good and bad,—more than enough: we wish now to obtain accurate scientific details. These the geologist, the botanist, and conchologist alone can give. The field is wide, and, for the first time in modern history, is fully open. At Constantinople, and throughout Asia Minor, the architectural student may visit tombs, palaces, and mosques, and live: he may study at leisure the construction of Santa Sophia: he may see the eight porphyry columns from the Roman Temple of the Sun; and the four "green granite" columns from the Temple of Diana, at Ephesus, with other wonders, "too numerous to mention." He will see how said columns are bound and braced with copper hoops and bars; how said building has given way, and shrunk beneath the ponderous dome, piers having cracked and floors sunk. Turbaned, but obsequious Turks will tout for "*backshish*," like our own cathedral vergers, and offer bits of the glass mosaic to relic-hunters; or said Turks will knowingly and cunningly point to the cross, as it was carved by the Christian builders, thinking thereby to draw an additional infidel sixpence. We should like to know, from one competent to judge, what is really the effect of the exterior of Santa Sophia: it surely must have some features of grandeur. There are also the Hippodrome, the aqueducts, the fountains, and the palaces,—these latter, huge shams having marble steps and marble columns to support wooden entablatures and shingle pediments. We hope our suggestions may not be too late, but that they may be in time to prompt examination and inquiry. Specimens of Turkish bricks, tiles, and earthenware pipes, as used in collecting water for domestic use, will add value to an architectural museum. Any account of existing Turkish waterworks will be useful; and a sample of water from "*the sweet waters of Europe*," for analysis, may serve to throw light on the name.

ST. OLAVE'S GRAMMAR-SCHOOLS.

IN our last volume (XIII. p. 564) will be found some particulars of the foundation of the School of St. Olave's and St. John's, Southwark, with a description of the buildings recently erected, under the direction of Messrs. Allen, Snooke, and Stock, architects. The engraving in our present number shows the entrance-tower, with the court-room and residence of the principal on the left-hand side, and part of the classical school, with cloisters under it, on the right.

This valuable school was first instituted by Henry Leeke, of St. Olave's, a brewer, who bequeathed, in 1560, 8*l.* per annum for that purpose. In 1571, a charter of incorporation was obtained from Queen Elizabeth, who ordained that it should be called "The Free Grammar-school of Queen Elizabeth, of the parishioners of the parish of St. Olave, in the county of Surrey," and that sixteen men of discretion, and most honest inhabitants in the said parish for the time being, should be governors thereof. In 1579, the churchwardens assigned to the governors a field called Horseydowne, now Horslydown, containing sixteen acres. This field in process of time was built over, and the leases having expired, the yearly revenue derivable therefrom, and from various other donations and bequests, is about 3,400*l.*



The old school and masters' houses stood in Churchyard-alley, near St. Olave's Church, and were removed in 1830, to make the approaches for London-bridge. A new edifice was then erected on the south side of Bermondsey-street, but the ground being required for railway extension, this also was removed in 1849.

Considerable difficulty having arisen in selecting a new site, it was not till 1852 that the governors were enabled to take possession of their chosen spot, and commence operations.

The new buildings, situate in Queen Elizabeth-street (late Back-street), in the parish of St. John, Horslydown, were commenced in April, 1853, and completed by Mr. Jay, the contractor, in November, 1855: the total cost, including fittings, was under 24,000*l.* The principal materials employed are red brick, from Sittingbourne, in Kent, with blue Staffordshire headers in diapers, and Hare-hill stone, from Messrs. Smith's quarry, near Leeds, Yorkshire. The buildings comprise a court-room, library and offices, large classical and English school, with various class-rooms appurtenant to each, two residences for the principal of each school, and porters' lodges; and they afford accommodation for 800 pupils. It will be seen on the plan that a small part of the design on the right-hand side has yet to be completed. The letters from A to J mark the various staircases.

ASSISTANT ENGINEER FOR DUBLIN.—We have received some comments on the recent election of an assistant engineer at Dublin. The salary is 250*l.* per annum: there were fifty-two applicants.

ST. OLAVE'S GRAMMAR SCHOOL: PLAN OF PRINCIPAL STORY.

GRAMMAR SCHOOL OF ST. OLAVE'S AND ST. JOHN'S, SOUTHWARK.—MESSRS. ALLEN, SNOOKE, AND STOCK, ARCHITECTS.

THE MEDIÆVAL REVIVAL QUESTION.

I REGRET that Mr. Scott should have given a somewhat personal tone to his remarks on my paper, not because it gives me the slightest offence or annoyance,—which I assure you I am far from feeling,—but because it seems likely to confuse the main question.

At the same time I will not deny that he is justified in the line he has taken. I had in some measure rested my case on my own impressions: he naturally wishes that these should not be taken at more than their proper value, and accordingly charges me with having changed my views, with having preached a virtue which I do not practise—namely, patience—and with having allowed my opinions to be biassed by personal considerations, on which account they must be received with caution. Such, I presume, is the drift of his argument.

That my views have changed during the last fifteen years, is no more than I admitted. Few who have pursued a course of study on any subject for that length of time, or who have observed what was passing around them, can say that they have not changed their views in some respects. I stated, "that when few modern Gothic works of merit were in existence, I thought the revival possible, and that a careful study of ancient examples might enable us to work in the ancient spirit." But, after having seen many new Gothic works of great merit, I considered that the attempt to revive the style would not be successful. As soon as I am convinced, by the full success of the Gothic movement, that I am wrong, and that I have mistaken a surmountable difficulty for an impossibility, I shall again change my opinion, and have great satisfaction in confessing it. My judgment is grounded not upon the amount of the progress already made, but upon the direction it has taken. It appears to me to tend rather to mere conformity with mediæval types, than to development of mediæval principles. The progress already made, though very great and most creditable to the energy, talent, and research of those who have attained it, I do not consider to be marvellous, nor more than was to be expected from their exertions. It was probable that after a long course of study among ancient models, some new buildings should appear, not only correct as to general forms and details, but in a considerable measure imbued with the spirit of their types. Many correct Gothic buildings have sprung up, and these I consider as having no small degree of merit. Some have caught the spirit of the mediæval period. These I look upon as possessed of merit of a very high order; but I cannot recognise any such development of mediæval architecture as, without losing its Gothic character, shall meet the wants, conform to the refinement, and express the spirit of the present age; and, in searching for the cause of this deficiency, I thought I discovered it, not in any want of genius or industry on the part of our own architects, but in the nature of Gothic architecture itself.

Mr. Scott, in noticing my first publication on church architecture, says, "Throughout the whole of the book, he seems to take it for granted that our future churches will be Gothic." From this your readers would be led to infer that I recognised or advocated no other style. I find, however, that I said in my 1st vol. p. 44, "The Italian is, perhaps, better adapted for a church than Gothic, where it is necessary to enclose a wide area under a single roof, or to have two tiers of windows on account of galleries, or when the front must range with modern houses." I can assure you, when I prepared my paper for the architectural exhibition, I quite forgot that I had so pointedly referred to the very contingencies which I then brought before the notice of my hearers. After describing some churches of the Italian style, in the neighbourhood of Nice, I remarked (Vol. I. p. 41), "And even in England there are many situations where the horizontal lines of the Italian would harmonize better with the scenery than the more aspiring forms of Gothic." In Vol. I. p. 211, I observe, "The Roman or revived Italian, though grounded on inconsistent principles, nevertheless offers some beauties and advantages unattainable in other styles, and in towns will sometimes harmonise the best with surrounding buildings." In Vol. I. p. 89, I urged strongly, at least strongly enough to call down the wrath of the ecclesiologist, what I have often urged since, the attempt to form a pure and complete round arched style, having the character rather of the Italian than the Norman.

The object of my work was not to revive Gothic architecture, but to offer such suggestions as might tend to the improvement of Church architecture in general, which I by no means considered to be synonymous with Gothic, however probable I might think it that Gothic or mediæval churches alone would be built for some time. I could not easily write on Church architecture without giving my chief attention to the Gothic styles, or dwelling upon their beauties; and if I have given any useful suggestions to the builder of a Gothic church, I am heartily glad of it, and would willingly do so again. If people are determined to build Gothic churches, I can only wish them to be as good ones as possible.

I hardly think my judgment has been warped by any personal feeling against the ecclesiological party. They certainly handled my first publication somewhat roughly, but I have since had no great reason to complain of them. We have often met rather as friends than enemies; and if we have now and then exchanged a rap or two, I hope it has been without malice. I have specially to thank them for their review of my last work, and their full and fair statement of many of the propositions which I most wished to bring under discussion; nor do I quarrel with the strong terms in which, on several points, they have expressed their disapproval. I am sure they will take my part when I am accused of fickleness or inconsistency, and will admit that, to the best of their knowledge, I have continued pretty steadily *qualis ab incepto*.

It was hardly necessary to bring my friend Mr. Winston's name into the discussion, but I may safely leave him to fight his own battles, if he thinks it worth his while; merely remarking that his perfect knowledge of his subject, and the care, labour, and study which it has cost him, might fully justify an occasional demonstration of intolerance on his part, which on mine would be quite unwarrantable.

If any bitter feelings have influenced my judgment, they have been caused by the ruthless tide of restoration which has swept over our ancient monuments, and in so many cases confused or obliterated the most authentic records of their history.

Mr. Scott assures us of the enthusiasm and earnest zeal which exist among the authors and promoters of the Gothic movement. I most sincerely rejoice that their devotion has not entailed upon them the necessity of any heavy sacrifice as regards their interest, prospects, or reputation. They have not been struggling without the favour or encouragement of friends. The style which they are labouring to restore to its perfection is that which has been selected for nearly every new church during about a quarter of a century, and seems still likely to retain its predominance. I cannot flatter myself that I have been in any degree instrumental, as Mr. Scott intimates, in urging or assisting them in their present course; but if so, I am happy to think I have done them no injury; and if I were to deny them my share of the praise to which they are so justly entitled, they would not feel the loss. No opinions expressed by me, or many more, can shake them from their position; nay, whatever may be the actual result of their labours, whether the re-establishment of the Mediæval Gothic as a living progressive style, or the introduction of one altogether new, they will in any case occupy a worthy and conspicuous page in the annals of architecture. They have already achieved no ordinary triumph. if they fail in the full attainment of the object they propose to themselves, it will be only because it involves an impossibility. I must, at least for the present, leave the arguments on the main question as they now stand. The imperfection I noticed in geometrical tracery is but one of many that cannot be avoided, however they may be disguised or modified. Mr. Scott's observation, that "No one has had much to do with architecture without knowing that little mathematical inaccuracies beset him in every style, which it is a part of his art so far to abate as to render them inoffensive," enables me to refer you to a proposition I suggested in my "Architectural Notes in France," and which, though I do not lay it down dogmatically, I think deserves some attention, namely, that a refined style requires a design providing for the strict mathematical observance of certain laws, expressed or understood, even though it may admit of inaccuracies in execution (p. 47, &c.);—in short, that a design should bear the test of accuracy instead of requiring the assistance or disguise afforded by inaccuracy. I do not suppose the proposition to be stated by me for the first time, though I do not remember to have met with it. I am sorry it did not suit my purpose to practise the patience I have preached by waiting forty or fifty years longer before expressing my opinions. I thought, if I had anything to say, I had better say it at once, even at the risk of being premature. However, as I am proved to have no patience myself, I do not feel justified in trespassing any longer on yours. J. L. PETIT.*

THE PROPOSED ROAD ACROSS ST. JAMES'S-PARK.

ON the motion of Sir Benjamin Hall, a select committee has been appointed to consider the best means of communication between those parts of the metropolis which lie north of St. James's-park and those parts which lie south and south-west thereof, and to report thereon to the house.

The committee consist of the following gentlemen;—Sir Benjamin Hall, Lord John Manners, the Chancellor of the Exchequer, Mr. Disraeli, Lord Robert Grosvenor, Lord Hotham, Sir Joseph Paxton, Mr. Stephenson, Sir John Shelley, Mr. Hutchins, Colonel Boldero, Mr. Drummond, Mr. Stuart Wortley, Colonel Wilson Patten, and Mr. Milnes.

Amongst the suggestions which have been sent to us is one from Messrs. Horner and Molesworth, who propose a *sunk* road under the park, and through the ornamental water:—"The road," they say, "would commence in Pall-mall, close to St. James's Palace, and would fall with an inclination of 1 in 24, until it reached the required depth. Where it crossed the Mall (or broad walk), the ornamental water, and the Birdcage-walk, it would be arched over: in other places it would be an open road, with retaining walls at the sides: the tops of the retaining walls would be coped with stone, just above the level of the ground, and would have a light iron railing fixed to the coping."

For our own parts we do not see the necessity for a carriage-way across of any sort. Opening the gates at Marlborough House, in Pall-mall, at Buckingham Palace, and Constitution-hill, would give all the accommodation required, and cost nothing.

The magnificent Mall, extending from the Palace-gates to Spring-gardens, is divided by ranges of trees into four alleys. Might not *one* of these be dedicated to the public throughout the whole line, and a way opened into Pall-mall at the end of it? The retirement of the palace need not be interfered with, while to the public the accommodation would be of incalculable benefit; but to make that advantage complete, there should be no restriction, as in Hyde-park, against Hackney vehicles. So far as the *drive* is concerned, perhaps there is some reason in the prohibition; but in the direct line, the distinction is insensate; and, as relates to a great commercial capital, not in the spirit of our free constitution. The road in the Regent's-park, where these absurd exceptions are not made, is not the less orderly.

The bridge and roads across St. James's-

* We have received the following note:—"Sir: I feel it my duty to correct an error I made in my paper on Mr. Petit's lecture. I alluded in it to a church spoken well of by Mr. Petit in his first book, but which a friend of mine had found to be very inferior. My friend has since told me that, though this was the case, I was mistaken as to the church he meant. I must, therefore, withdraw the statement so far as it helps my argument, to which I find that it is inapplicable; and I should be sorry to say anything which would appear intended to impugn Mr. Petit's judgment in a matter not affecting the argument in hand, though we may fairly differ in our judgment on facts as well as on principles.
GEO. GILBERT SCOTT."

park, designed by Mr. Pennethorne, are very handsome, and include a large amount of ornamental sculpture; but we must nevertheless continue strongly opposed to the proposed division of the park, and hope the committee will elect other means to give the thoroughfare required.

THE GOVERNMENT AND ARCHITECTS' REMUNERATION.

WE are informed that a Treasury minute has been drawn up to the effect, that in future 3 per cent. only is to be paid to the Government architects for public buildings! It needs no foresight to see that, should this be the case, the precedent will greedily be adopted by public companies, boards, &c. and the position of the architect be greatly injured. Some stir should at once be made by the profession to prevent the threatened evil. In the greater number of cases, the present received commission of 5 per cent. affords but bare remuneration for the proper discharge of an architect's duties. The Institute should at once move in this matter if the statement be found correct, and doubtless will do so.

THE BARRACK COMPETITION.

AT last we are able officially to make known the names of the successful candidates in the Barrack competition. 114 sets of designs were sent in, namely, eighty-nine for infantry, and twenty-five for cavalry; the estimated costs varying from 28,000*l.* to 230,000*l.* The designs fill six of the committee-rooms at the House of Commons, and show that many of the competitors have taken great pains in the matter. The following are the names of the successful candidates:—

For Infantry.

1. Mr. Geo. Morgan.
2. Messrs. Lockwood and Mawson.
3. Mr. John Jones.

For Cavalry.

1. Messrs. T. H. and M. D. Wyatt.
2. Mr. Geo. Morgan.
3. Mr. Wm. Young.

Mr. Morgan and Mr. Young have worked together to some extent, and it will be seen that they have had the good fortune to take three of the six premiums. The first on each list will of course be employed, when occasion serves, to carry out his design. Lord Monck was the chairman of the Committee of Selection, and Professor Donaldson was added to the committee to assist.

METROPOLITAN BOARD OF WORKS.

AT the meeting of 22nd ult. the Secretary, Mr. Woolrych, read the report, adopted by the committee of the whole Board, as to the appointment of officers, recommending, as two principal assistant clerks, John Pollard and Edwin Cresey, at 350*l.* per annum each. As assistant clerks, Wm. Tyler, at 175*l.*; C. F. Pocock, 120*l.*; W. P. Andrews, 100*l.*; James Pafe, 90*l.*; and George Edward Link, 80*l.* per annum. In the accountant's department, E. F. Browne at 180*l.*; Charles Nixon, 140*l.*; and Henry Edwards, 100*l.* per annum. That Mr. Thomas Lovick, Mr. John Grant, and Mr. Edwin Cooper, be appointed assistant engineers during the pleasure of the Board, at a salary of 350*l.* each, with an allowance of 50*l.* per annum for travelling expenses respectively. The following as clerks of works, at three guineas per week each, viz. John Douglas, W. Walker, J. J. Lloyd. E. Lacy, J. Robinson, and C. Andrews. That the following be draughtsmen, at three guineas per week: W. Graves, D. M'Laughlan, T. Granger, and H. Coffee; at two-and-a-half guineas per week—R. J. Hunter and E. D. Hacman. As engineer's clerks, W. Conquest, at 175*l.*; Thomas Graham, 150*l.*; and H. R. Merly, at 100*l.* per annum. As clerks to the accountant—principal clerk, Walter Newell, at 200*l.*; assistant, Henry Hale, at 150*l.* That Messrs. Smith and Son be appointed solicitors during the pleasure of the Board.—Some discussion ensued in reference to a proposal to substitute Mr. Donaldson as an assistant engineer instead of Mr. Grant; but the report was finally adopted by a majority of 21 to 15.

The appointment of a committee of works, to consist of fifteen members, was moved by Mr. Wright, pursuant to notice. It was not intended, he said, to delegate to such a committee any executive functions, or any of the powers of the Board itself. He wished to divide the metropolis into about fifteen districts, with reference to public works and to this committee.

Mr. Hunt submitted that they ought not to proceed with the improvements of the metropolis in particular parts, until they had before them some grand scheme for its general improvement, and had recommended that scheme for adoption. If the object of the motion was to let the public know that the Board was ready to receive plans for the general improvement of the metropolis, and then to proceed to select that which they thought best, he was prepared to support the motion of Mr. Wright.—Mr. Hows objected to hand over to such a committee the power which, as was implied in the very name of the Board, it ought itself alone to exercise.—Mr. Turner said it was impossible to consider any particular measure of improvement *per se*, till they had before them such schemes as might be offered for the improvement of the metropolis as a whole. Mr. Bidgood, Mr. Barslem, Mr. Hawkes, Mr. Corrie, Mr. D'Iffanger, Major Lyon, Mr. Hall, Mr. Ware, Mr. Harrison, Mr. Carpmell, and the president, having also joined in the discussion, *pro et con.* the motion for the appointment of the committee was put and carried.

Re Building Act.—On (this) Friday, February 29th, the Board will take into consideration a report from the committee appointed to consider the duties of the Board under the Building Act, containing the following recommendations:—

That the application of Mr. Charles Warr to erect in the Wandsworth-road certain dwelling-houses and shops beyond the general line of frontage be not granted.
That the application of Mr. George Needham to construct the eaves of four adjoining houses in the district of Hackney, in the manner described in such application, be granted.
That Messrs. J. H. Taylor and R. Parkinson be apprised that in the opinion of this Board they are continued by the Metropolitan Building Act as district surveyors of Tottenham and Hornsey, respectively, for the purposes of that Act.
That the hamlet of Penge be constituted a separate district, for the purposes of the Building Act.
That the parishes of Plumstead and Eltham be constituted a separate district, for the purposes of the Building Act.
That Putney and Roehampton be constituted a separate district, for the purposes of the Building Act.

At the Board on Friday, 22nd, it was ordered that the election for the new districts take place on Friday, the 7th March.

THE LEWISHAM DISTRICT-SURVEYORSHIP.

THE QUEEN *v.* BADGER.

AN appeal on the part of Mr. Badger was heard at the Court of Queen's Bench on the 23rd ult. to quash an order of the justices of Kent, for the removal of a district-surveyor from his office. The point in issue was, whether the justices had exceeded their jurisdiction.

Mr. Justice Coleridge delivered judgment, and said the Court was of opinion, after full consideration, that the justices had no jurisdiction in the matter, and that the order for removal of the surveyor ought to be quashed.

Lord Campbell's opinion was read, but as the learned lord's judgment stood alone, Mr. Justice Wightman and Mr. Justice Erle agreeing with Mr. Justice Coleridge in their judgment, the order was quashed.

Mr. Badger will therefore be reinstated.

THE METROPOLITAN BUILDINGS ACT.

HOT-WATER PIPES.

ON the 21st ult. Messrs. John Weeks and Co. of King's-road, Chelsea, appeared before Mr. Traill, at the Greenwich Police Court, to answer a summons taken out against them by Mr. Browne, acting in lieu of the district-surveyor, who was the architect for the alterations, charging them with having placed certain pipes for the conveyance of hot water nearer than 3 inches to the woodwork of the pews of the church of St. Paul, Deptford, contrary to sec. 1, rule 4, of the Metropolitan Buildings Act, 18th and 19th Vict. cap. 122.

The defendants acknowledged the fact, but contended that the provisions of the Act of Parliament did not apply in the case, inasmuch as the water to be conveyed through the pipes could not, by any possibility, be used at a higher temperature than 212 degrees, and that wood would not char under a temperature of 500 degrees.

Mr. Traill said it was not a question as to the degree of heat to be conveyed that the words of the Act of Parliament applied to, but the purpose for which the pipes were to be used.

Mr. Browne said the question had been fully discussed before a committee of the House of Commons, and the evidence of Mr. Braidwood went to show there was danger to be apprehended in such cases. Besides, although there might be no danger from water supplied at a heat of 212 degrees, yet the pipes might, at some future time, be used as a means of conveying dry heat at a much higher temperature.

Mr. Traill said he had no alternative but to make an order on the question, as the point raised called upon him to do no other than expunge the words of the Act of Parliament.

The defendants said it was a question of the highest importance, and affected nearly every church and well-finished house in which hot-water pipes were used.

It was suggested that the Board of Works might be induced to apply to Parliament for an amendment of the Act.

Notice required to Surveyor.—On Saturday last, Robert Danger, builder, was summoned by the District Surveyor of St. Pancras, to Clerkenwell police-court, for penalties incurred by commencing alterations to two houses without giving proper notice. The builder had called at the surveyor's office, and although Sec. 38 was pointed out to him, and the absolute necessity that his notice must be in writing, he refused to give any other than a verbal communication: he was accordingly fined, and had to pay the costs in both cases.

THE CONDITION OF THE THAMES.

INSTITUTION OF CIVIL ENGINEERS.

THE discussion of Mr. Robinson's paper was continued on the 5th and again on the 12th of February.

It was contended, that the health of the inhabitants should not be endangered on account of the conflicting claims of the Government and of the Corporation to the rights of administration, or of dealing with certain powers, by which alone a great benefit could be conferred upon or withheld from the metropolis; for there could be little doubt of the miasmatic vapours arising from the impurities held in suspension by or deposited upon the mud-banks by the waters of the Thames augmenting the spread of disease. It was, therefore, incumbent upon the contending parties rather to combine their forces for the execution of the works of improvement for the common weal.

Ague was formerly the prevalent disease; but the drainage of the land of the marshy districts near the river almost obliterated that malady: then followed fevers of various kinds; but they were diminished or prevented by abolishing cesspools beneath the houses, and by more rigid attention to house sewerage: then came cholera, the recurrence of which would doubtless be in some degree counteracted by ameliorating the state of the banks and shoals of the river, to whose noxious vapours much of the disease of the metropolis must be attributed, when it was considered how many millions of gallons of vapour were given off per day from the river alone. It had been stated that the mortality was three times as great on some parts of the coast and on the shores of muddy rivers, as in the inland districts; and there could be little doubt, that there would be a great accession of disease, but for the constant ebb and flow of the tide. It was therefore much to be doubted, whether any plan by which that incessant change in the water of the river would be to some extent arrested, would be beneficial to the general health of the metropolis.

There could be little doubt also of the advantages to be derived from such shore works as would give to the bed of the river an uniform capacity. The propositions of Wren, Rennie, Mylne, Wyatt, Trench, Martin, Walker, and Page, all had that object in view, and it was most desirable that the Government and the City should settle their differences, in order to the execution of some definite and comprehensive plan.

Recurring to the plan proposed in the paper, it was contended that the scheme of raising the sewage from the mouths of the present sewers would be so expensive as to amount to a prohibition, especially if such power was provided as to enable all the storm-waters to be raised. Besides, if the sewage was all dammed back to the extent that would be necessary for such a system, large portions of Lambeth and Westminster would be rendered uninhabitable.

With reference to an address [by the City solicitor], remarkable not only for the humour and vivacity with which the statement had been given, of the long and close intercourse between the Corporation and the river, and the litigation now induced by the pretensions of the Government, but which had even raised from his bed the venerable genius of the stream, and induced him to unveil his griefs, it was doubted whether the confidence had been fully given; whether, in these conversations, which had probably taken place in the "cool tranquillity of dewy eve," and under the genial influence of City hospitality, Old Father Thames had not made some remonstrance, in a tone of complaint, of sundry negligences on the part of his old friends; of the utter neglect of the grand plan of Sir Christopher Wren; the entire disregard of architectural propriety, or of uniformity of

line, exhibited by the warehouses and wharfs; vast shoals and mud banks on all sides; several of the bridges in a state of jeopardy; and that dire foe "vested interest" allowed to rise up as a lion in the path, barring all improvement. The Corporation had only themselves to blame for all this; but as it appeared that there was such confidential communication between that plain-spoken old gentleman Father Thames, and the worthy energetic legal representative of the Corporation, it was to be hoped that, henceforth, all good plans for amelioration would receive active support and assistance in the City;—for instance, that concessions would be granted by the Corporation to persons desirous of improving their water-side premises, merely on the production and approval of their plans, instead of obliging them, as at present, to obtain the sanction of their neighbours, which was virtually a prohibition, because every man knew that he would be obliged to follow the example of his more energetic neighbour, or he would soon find his premises at the bottom of a mud trap, and out of the reach of the river.

The complaints against Government interference were but too well founded, as was, unfortunately, felt by all who had Bills before the House, for any works on the banks of the Thames. The Bill might go on very smoothly until the third reading, when a sleek gentleman made his appearance with an application merely for the insertion of a little clause for the protection of the rights of the Crown; which meant, that all plans should be submitted to, and be approved by, various heads of "Circumlocution" Offices; the inevitable result being, that the unlucky wight seeking to have his plans approved, wasted his time, and then had to pay a good round sum for some imaginary right supposed to be conceded to him, for doing something which could be of no earthly use to him, or for proceeding without let or hindrance to some place whither he had no intention of or interest in going. Now if he was thus mulcted for the welfare of the nation, or the benefit of our sovereign lady the Queen, no one would grumble very much; but when it was known that the money so obtained only went to fatten "the red-tape worms," the matter was beyond endurance.

ARCHITECTS' RESPONSIBILITIES.

SYMPSON *v.* LLOYD.

IN the Court of Exchequer Jan. 29, Mr. H. T. Cole showed cause against a rule for a new trial, which had been granted on the ground that the verdict which passed for the defendant at the trial at Bristol before Mr. Justice Williams was not justified by the evidence. It appeared that the plaintiff was an attorney, and that he had employed the defendant, who was an architect, to prepare plans and drawings for, and to superintend, the alteration of a house near Weston-super-Mare, on which he contemplated an expenditure of nearly 3,000*l.* The works were extended over a period of six years, and, on their completion, the defendant sent in his bill to the plaintiff, who, although he had occasionally complained of delay on the part of the defendant, did not make any direct or serious imputation on him. The plaintiff, however, disputed the amount of the bill, which was 322*l.*; and, after some legal proceedings, he settled the action through a friend and agent, by paying a sum of money which, with past payments, amounted to 230*l.* With this settlement the defendant deemed that his connection with the plaintiff ceased; but the plaintiff then brought this action against him, in which he claimed compensation from the defendant *for alleged neglect of duty as architect, and for the delay in the prosecution of the works occasioned by the absence of working drawings and plans.* At the trial the plaintiff succeeded in establishing his case to a trifling extent, but the jury disregarded the evidence, and, acting on prejudice, gave a verdict in favour of the defendant. When the report of the learned judge was read, he certified that he thought the verdict ought to have been for the plaintiff for nominal damages, but added that he could not regret the verdict which the jury had given. It was now contended, for the defendant, that the jury were justified in the course they had taken, as it was clear that the claim of the plaintiff was included in the settlement of the defendant's action against him, and that as the jury were the best judges of the facts, their finding ought not to be disturbed, or, at all events, it could only be so on payment of costs.

Mr. Serjeant Kinglake and Mr. Karslake, who appeared for the plaintiff, were not called upon to support their rule, for

The Chief Baron was of opinion that the report of the learned judge was conclusive, and that, the jury having taken a wrong view of the evidence, the case must be sent down to a second trial, unless the defendant would consent to a *stet processus*, the result of which would be that neither party would get his costs. There was no doubt that the plaintiff had made out a case, but it was one of a most trumpery description, and one which entitled him to damages of the smallest, the lowest, the meanest amount. A farthing, or any smaller sum by which the jury could have signified their contempt for his cause of action, might well have been awarded as damages; but to the verdict, with some amount of damages, the plaintiff had made out his title, and the jury were not to be allowed to find for the defendant in defiance of the law and evidence. It might be that the Court would gladly deprive the plaintiff of his costs though he might show himself to be entitled to a verdict; but the Court could not make a law for a particular case or allow a jury to do so. The judgment of the Court, therefore, was, that the rule for a new trial must be made absolute, but without costs, as the verdict was so clearly wrong; but the better way for both parties would be that the defendant should agree to a *stet processus*. Judgment accordingly.

COMPETITIONS.

Darlington Cemetery.—In reply to the advertisement from the Burial Board, which appeared in our columns, thirty-two competitors entered the field, some of whom sent eight or ten designs, making a total of 252 drawings. These were all hung in the Mechanics' Hall for about a month, when the Board selected five designs marked "Labor et spes," (two) "Ad rem cum Deo," "L'esperance," and "Excelsior" (which was also the motto adopted by two other competitors). After satisfying themselves that the plan could be carried out for the estimated amount, the Board selected "design No. 1" marked "Labor et spes;" but have not yet agreed as to the recipient of the second premium. The successful competitor is Mr. Pritchett.

Luton Schools.—Sir,—surely the advertisement for designs for the new National Schools at Luton, Beds. must be intended as a hoax, merely to see whether architects are become totally imbecile, as they offer no inducement, but charge five shillings for a plan of the site to candidates for the *honour* and *mental* as well *manual* labour, and the *materials* required to produce these designs. Now, suppose this Committee were offered the *privilege* of sending one cwt. of tea, sugar, or raisins, one score pair of boots, one hundred tin kettles, or half a hundred straw bonnets, to an unknown *Committee*, and ordered to pay the carriage, and five shillings for a printed description of the articles required in competition, what would they think of the sanity of the advertisers?

AN ARCHITECT.

METROPOLITAN IMPROVEMENTS.

AT a Court of Common Council, held in the City on the 21st ult. the chairman of the City improvements committee brought up the report upon the reference to consider of the appropriation of the site of the Fleet prison and other vacant ground belonging to the City. It stated that the committee were of opinion that no steps should be taken for the appropriation of the site of the late Fleet prison until it be determined whether anything is to be done respecting the removal of Newgate-market, and the arrangement of the markets of the City generally; and whether any alterations are likely to be made with respect to the Central Criminal Court and the gaol of Newgate, so that the site might remain available for any great and comprehensive improvements which may hereafter be agreed upon. After some discussion, the report was agreed to. A report by the City Lands Committee, on the construction of new City law-courts, was then considered. This report, after some preliminary explanation and detail, recommended that the offices lately used for the transaction of the Bridge House business and the Guildhall kitchen, with the adjoining offices, should be converted into new courts, agreeably to plans accompanying the report, and at an estimated expense of 7,500*l.*, and that in the mean time no expense should be incurred in making alterations in the existing courts of law. In the course of the discussion which ensued, Mr. Bunning, the City architect, stated that adequate arrangements for the accommodation of attorneys would be made in the law courts, and that the crypt under the hall would undergo no defacement or injury by being used for the purposes of a kitchen two or three days in the year, especially as the cooking apparatus by gas might be adopted. This report also was agreed to. A voluminous report on Blackfriars Bridge repairs was then made by the Bridge House estates committee, detailing the enormous sums of money expended in repairing Blackfriars Bridge from time to time, and recommending that the unsightly water-ways under the fifth and sixth arches of Blackfriars Bridge, and the dolphin piles and booms connected therewith should be removed, and that in lieu thereof iron ribs should be placed under these arches as shown by the model accompanying the report, at the estimated expense of 17,000*l.* This report was ordered to be printed.

Notices of Books.

The Food of London. By GEORGE DODD, author of "British Manufactures," &c. London: Longman and Co. 1856.

THE supply of food to a great city is, indeed, amongst the most remarkable of social phenomena,—full of instruction on all sides. And, perhaps, the most wonderful of all its characteristics, at least so far as regards the supply of food to London, is the fact, that there is no organised commissariat—no individual responsibility,—that, in fact, "nobody does it." Yet there are *nine hundred millions* of daily rations annually supplied, and by never failing daily, weekly, or other periodical instalments, within the bounds of our immense metropolis! Here is a grinding-mill, of two-million-and-a-half jaw-power, ever at work, and grist ever going into its hoppers and grinders! Not only, indeed, is abundance provided, even while hundreds may be perishing from want of the means to purchase it; but, as Mr. Dodd remarks, the rations are so infinitely varied as to meet every caprice of taste; and if a gourmand or an epicure only wish, once or twice perhaps, for "a dish of peacocks' brains, or of stewed humming-birds, or dove's hearts," doubtless, if his pockets be well lined, "his taste will be gratified: it will simply be a question of price." That London is better supplied without a commissary-general's department than with one who can doubt? Yet how differently such matters are managed in Paris! What a heavy responsibility rests on the shoulders of the authorities and the Government there, even because of a very partial and limited intermeddling with the City's supply. But probably the poor of Paris reap some immediate benefit thereby, which those of London lose in consequence of the want of some such ruling power. The London poor were lately made to pay nearly double price for sugar to their tea and coffee for a time, simply in consequence of certain selfish, greedy, and over-reaching speculations on a great scale amongst the London merchants. Perhaps it would have been well for the London poor had the speculators been compelled by some over-ruling and despotic authority to disgorge their ill-gotten gains, or rather, had they been prevented from reaping so illegitimate and iniquitous a harvest. Yet we should not like to see much intermeddling with the food supply of the people for all that. Our own present freedom of trade, however, or want of interference with its regular routine, did not always exist. In times of old, the corporation of London not unfrequently thrust in a charitable and kindly hand between the poor and their necessities or their oppressors. Thus Stow tells us of two very bad seasons in succession, 1392 and 1393, when the people sickened by eating nuts and apples, wanting better food, and when the mayor and aldermen advanced corn at very low prices to the poor. Again he tells us that the pillory and a pair of stocks upon it at the cage on Cornhill was "for the punishment of bakers offending in the assize of bread, and for millers stealing of corn at the mills." Some such implements for behoof of our modern adulterators, not only in the baking line, but in hundreds of other branches of business connected with the food supply of the metropolis, might have a *wholesome* effect on scoundrels, as well as on their victims, even now.

Mr. Dodd's volume is a very elaborate one, and full of research, as regards both the ancient and the modern supply of food to London. Much of it, however, unavoidably, relates to the metropolis only by inference, and more properly belongs to the subject of the food of England, or of Britain, or the British Isles. The author is chary, and most properly so, of presenting general or aggregate calculations as to slump quantities, or costs, in the matter of supply. Indeed, it must be very difficult, or nearly impossible, correctly to estimate the total supply of almost any one single article, derived from every particular source. Accordingly, he more frequently gives us exact details

of the sale of certain special markets, or of the conveyance by certain particular routes or railways, leaving us rather to infer the probable sum-total, than to be guided by any given figures. Thus we are informed, that "the quantity of milk now brought to London by rail, is prodigious, chiefly by the Eastern Counties Company: in 1854, the conveyance of this company exceeded three millions of quarts." Again; — "the seven railway companies brought nearly 1,200,000 head of live stock to the metropolis, in 1853:" — "in the year 1854, nearly 12,000 coal-laden ships arrived, bringing 3,400,000 tons of coal; and as the railways brought nearly 1,000,000 tons more, the figures show how extensively large was the aggregate quantity." In the first half of 1855, the South-Eastern Railway brought up 16,000 sacks of wheat, together with 21,000 sacks of flour; but some of the other lines far exceed this limit. Vessels from foreign ports, too, frequently bring enormous cargoes of 2,000 or 3,000 quarters at a time. There are 2,500 bakers' shops in the metropolis at present, all "doing" a greater or lesser number of "sacks" a week, — say from ten to twenty, as frequently advertised. A round guess has been made that London disposes annually of 700 to 800 tons of mere watercress, or fifteen millions of bunches of that wholesome little article. In assisting towards the washing down of the more solid provender, one firm alone, Messrs. Truman, the brewers, are said to possess four vats that will contain 80,000 gallons each, and store vats, altogether, for 3,500,000 gallons. The store in spring at one of these vast establishments, has even reached 4,000,000 gallons. The author gives a list of fifteen of the principal brewers of London. "Some computers," he observes, "have guessed that there are 1,200,000 barrels of beer and ale consumed in London annually; while another computer has set down 2,000,000 barrels as the probable quantity brewed in London; and a third has named about a thousand million tumblers' as a probable quantity,—estimates but little accordant, and tending to show how difficult it is to arrive at correct results on such a subject. If, as there seems not much doubt, the two great breweries send forth 50,000 gallons per day each, the magnitude of the trade is rendered sufficiently apparent."

In the estimations of a careful and discreet writer such as this, one cannot but confide with much more surety and satisfaction than in the slap-dash of more daring and *effective* authors. In all the 524 pages of Mr. Dodd's volume, the interest never flags; and the abundance of research makes itself obvious in every page. The portion of his work devoted to old London usages, in respect to food and drink, to "meals," and manners, and to social life in general, is particularly interesting, and replete with substantial "entertainment," — "for man" at least, though not for "beasts." The question of food for the body is made to supply food for the mind.

VARIORUM.

MR. TIMBS's "Year-Book of Facts in Science and Art," for 1855-6, has been issued by Bogue, of Fleet-street. It is illustrated with a wonderfully good likeness of Sir Roderick Impey Murchison, and is really a most useful and interesting publication, in which all the more important facts (and theories too, occasionally) in science and in art that have been elicited in the course of the past year are recorded in moderate compass and in a get-at-able form. All who peruse it will derive refreshing and pleasant reminiscences of the progress of science and art throughout the year: even the facts one has aided in contributing to the store acquire a new interest when thus seen ranged in their new rank and file, and stored away in an easily available shape, for future reference.——Under the title of "Chamouni and Mont Blanc" (published by Cornish, High Holborn), Mr. Eustace Anderson gives a pleasant account of his ascent of the monarch of mountains, on the 15th of August, 1855,—an ascent described in the journals at the time. Mr. Anderson condemns the present system pursued as to guides, which prevents travellers having the assistance of those in whom they have confidence, unless it happens to be "their turn" on the roll.——Hardwicke's "Shilling City Guide" is a pocket directory, containing a list of public companies, assurance offices, and a variety of useful information.——Mr. Fairbairn's new book, "Useful Information for Engineers" (Longman and Co.) is certainly not misnamed. It will have our attention at greater length before long.

Miscellanea.

ILLUMINATING CANDLES.—Your correspondent—"Deborah H."—may *illuminate* her candles, of whatever kind they may be, by dissolving a lump of *spermaceti* of the size of a filbert in 1 ounce of rectified ether; then adding 5 ounces of *spirits of wine*, and using the mixture as the menstruum for her colours. *Mineral pigments* should be avoided as much as possible; and with the softer varieties of *composites*, one colour should be allowed to *dry perfectly* before another is laid on near it, otherwise sharp outlines will be unknown, and the whole will present the attractive appearance best expressed by the word *smudgey*.—W. L. S.

RAILWAY COMPETITION AND CHEAP FARES.—In course of the apparently reckless and ruinous competition which has been going on of late between the Great Northern and the North-Western Railway Companies, a result has even here been realized which fully confirms the truth of what we have so often urged as to the profit of comparatively low fares when contrasted with high, although in the present instance such confirmation could hardly have been anticipated, and indeed could scarcely be expected long to hold good. From Doncaster to London, previously to the present competition, the average weekly passenger traffic yielded about 60*l.* drawn from 40 passengers. During the first week of the cheap trains, the sum realized (from 556 passengers) was 104*l.* 2s.; and although, doubtless, a rush might be expected at the outset which would not be very likely to continue for any length of time, nevertheless, at the close of last week, the receipts at the same station for the up-trains during the week amounted to no less than 146*l.* 17s. derived from 775 passengers. An agreement to refer the dispute back to Mr. Gladstone has probably put an end to the present competition; but it ought to teach every railway company a lesson in the science of profit and loss.

THE SOUTH-STAFFORD WATERWORKS.—The turning of the first sod of these works at Lichfield by Lord Ward, took place on Friday in last week. The district which this company proposes to supply with water, extends from Walsall on the north to Dudley and Rowley Regis on the south, and from Westbromwich on the east to Bilston and Sedgley on the west. It includes, besides the towns above named, Lichfield, Wednesbury, Darleston, Willenhall (if not supplied by the Wolverhampton Waterworks Company), Tipton, and Oldbury, containing an aggregate population of upwards of a quarter of a million of souls. It is proposed in the first instance to make provision for a daily supply of four million gallons, which will be collected at Lichfield in a reservoir capable of holding sixty million gallons, and pumped up from thence to a reservoir of similar capacity at the Moat Hill, near Walsall, from which it will flow by gravitation to reservoirs at Wednesbury and Dudley, for the supply of the district, the pipes to be laid alongside the South Staffordshire Railway. The contract for the construction of the reservoirs at Lichfield and Walsall was announced to have been taken at the half-yearly meeting held in September last, and although some delay occurred, the contractors engage to complete the works in the course of the present year.

THE IRON TRADE.—The ironfounders in Glasgow number about fifty, and we observe that another has just opened in St. James'-street, Paisley-road. Within twenty miles of Glasgow there are also about as many more; so that the consumption of pig iron in this neighbourhood is now upon a very extensive scale, particularly for the production of castings for railways, gas and water works, buildings and bridges. ——Mr. Mickle, of Willington, has obtained a patent for the economising of fuel in iron smelting by the dry distillation of coal, and the use of coke and gas in the blast furnace as fuel, causing, it is said, a much larger production of iron, of improved quality, with an average saving of 7s. to 15s. per ton of pig metal.——Mr. E. Ripley, of Troy (U.S.), has taken out a patent for a method of casting metals, which consists in a peculiar arrangement for quickly withdrawing the air from the mould, so as to insure a better filling up of the same.——Mr. A. Warner, of New Broad-street, has taken out a patent for combining sheet-iron or steel with sheet-lead, zinc, tin, copper, or their alloys. Any two sheets to be combined have a coating of soldering material placed between them, and they are subjected to heat while pressed in a flat state until completely united.

ARCHITECTURAL INSTITUTE OF SCOTLAND.—The Architectural Institute met on Monday, the 18th, Mr. P. Wilson, architect, presiding. A paper was read by Mr. T. Davies, on the relative merits of wrought and cast-iron, as applied to beams for building purposes. Mr. Davies then entered into calculations of the strength of different sections of cast-iron beams; the result of which was, he considered, for general purposes, the most eligible section of beam is that having a web from ⅓ to ½ of the sectional area, and flanges from 3½ to 1, or 3 to 1. The paper was illustrated by a series of tables and diagrams. It was agreed that the Institute should consider about being at the expense of further experiments on the subject, which Mr. Davies consented to superintend. Mr. John Murray, advocate, then read a paper on "The Laying-out of Open Spaces in Towns." Mr. Murray, after discussing the subject generally, stated as his opinion that while large spaces like West Princes-street-gardens and Queen-street-gardens, were most advantageously enclosed and laid out, at other places, where there was no great extent of ground—such as the spaces at Nicolson-square, and at the crossing of Walkes-street and Melville-street—there ought to be no enclosure, but the open space laid down with stone pavement.—*Edinburgh Post.*

ARCHITECTS' BILLS.—At the Cardiff County Court, in course of last week, an action was brought by Mr. George Chittenden, architect, against Mr. V. W. Pritchard, a gentleman resident at Crofta, near Llantrissent, for payment of 11*l.* 18s. for attendances and advice respecting a dispute between the defendant and his builder, Mr. Waller, of Cardiff, and for making certain drawings for additions and alterations to his house at Crofta. The sum of three guineas had been paid into court by defendant. In course of the evidence led, it was proved to the satisfaction of the judge, by the evidence of the plaintiff himself, that he delivered the ground-plan in dispute to the defendant personally, pointing out to him afterwards, on his asking plaintiff for the one-pair plan, dotted lines on the ground-plan, which indicated what defendant required. In respect to this ground-plan, defendant denied, on oath, that he ever either instructed or received any such plan or drawings of any description, from plaintiff, although he admitted that he had consulted him, and for the advice given had paid in the three guineas lodged in court as adequate compensation. The judge expressed his dissatisfaction with certain portions of the defendant's evidence on the one hand, and his favourable impression of the plaintiff's on the other, and at once gave a verdict for the plaintiff.

THE SCRIPTURAL MUSEUM.—The project for the establishment of a Gallery of Scriptural Illustration, with the view of awakening an interest in the study of the Scriptures, and collecting materials for their elucidation, and for the confirmation of their historical accuracy, is assuming a definite form. Rules and regulations have been printed, and the promoters meet at the rooms of the Palestine Archæological Association, in Hart-street, Bloomsbury, where the Rev. Mr. Edwards receives communications and contributions. Amongst the subjects embraced in the collection, are Landscape Scenery of Palestine, Models of Jerusalem, &c. Sacred and Domestic Antiquities of the Israelites, Assyrians, Egyptians, &c. &c. A scheme of lectures will also be organized in connection with the Institution.

SANITARY PROGRESS AT CROYDON. — From printed mortality tables, &c. for the parish of Croydon, for the years ending December 31, from 1848 to 1855 inclusive, it appears that a large proportion of the zymotic class of diseases, occurring at Croydon, prevail in those districts without drainage or water supply. The total number of deaths from all causes last year was 508, which is less by 112 than would have occurred at the average rate of mortality per annum for the last seven years, allowing for increase of population. The births for the year were 747. The total number, of houses in the parish is now 4,287. Of this number there are in the special district 3,296; and of these supplied with water, 2,046; showing still without water supply 1,250; and probably 200 or 300 above that number in the special district unconnected with the drains. Notices of 178 new houses were received and approved in 1855.

THE ARCHITECTURAL EXHIBITION.—In the report last week, the printers turned Mr. Theodore *Phyffers*, the sculptor of the pleasing group called "The Heavenly Chorus," into Mr. Phyggen. We gladly correct the error, and add that the same artist exhibited some wood-carving deserving notice.

LONDON AND MIDDLESEX ARCHÆOLOGICAL SOCIETY.—A meeting of this Society was held at the French Gallery, Pall-mall, on Tuesday evening last, Mr. Beresford Hope presiding, when several interesting papers were read, of which we will give some particulars next week. The meeting was well attended.

RELICS AT BOW.—On the 6th of February, as some workmen were excavating at Mr. Hemming's Iron Church and House Manufactory, Bow, they struck against a large stone, which proved to be the cover of a coffin of the same material cut out of the solid. On opening it the skeleton was found quite perfect, and, from the size of the bones, appeared to be that of a largely-proportioned man. The arm-bones were crossed, and the whole in good preservation. The coffin was found in a firm but moist loamy soil some 4 feet below the surface, and lay due east and west, the head of the skeleton being towards the west. In close proximity an urn was dug out: this contained several small bones, and was of a dark grey pottery, with a diameter at the base of between 4 and 5 inches. Its original shape could not be made out, as the workman's tools had broken it in pieces. A smaller urn or vase of red pottery was likewise discovered. This was much mutilated, but, from the remains, appears to have been very elegantly fashioned in the bowl, with an attenuated neck and a curved handle leading from the top rim to the body of the urn. The ground in which these remains of another age were found was for many years the fair-field, and at one time I believe the site of a monastery. The coffin and urns themselves would, however, appear to belong to the time of the Romans.—JOHN NICHOLLS.

IMPERIAL HOTEL ON SITE OF NATIONAL GALLERY.—It is reported that the bill for an Act to establish at Charing-cross a gigantic English hotel is in a fair way of being passed. The proposed capital for it is 1,000,000*l*. At first sight it certainly seems rather a wild notion to buy the National Gallery; but we have no reliable information on the subject.

ARCHITECTS' BENEVOLENT SOCIETY.—The annual general meeting of this excellent society will be held in the rooms of the Institute of Architects, Grosvenor-street, on Wednesday, the 12th of March, to elect officers and council for the year, and for the general purposes of the society. It is hoped there will be a good muster. The subscribers propose dining together afterwards.

FIRE AT LEEDS INDUSTRIAL SCHOOLS.—With reference to this occurrence, the architects, Messrs. Perkins and Backhouse, wish us to say, that "the origin of the fire is a mystery, for it had no connection whatever with any hot-air flue by which the building is warmed." It commenced in the foul-air extraction-flue, under the raised desks, the platform of which has perforated risers for the exit of the air. The warm-air flues and the extraction-flues for ventilation have no connection whatever. The damage done by the fire is not very serious.

FALL OF A STAIRCASE AT CHELMSFORD.—At the Shire Hall, Chelmsford, on Thursday in last week, while a crowd of persons were collected on the stone staircase leading to the petty sessions room, the staircase fell, carrying those on it down to the flight of stairs below, where one person was killed, and several were severely injured.

CAREY-STREET IMPROVEMENTS.—I notice a movement being made with these anxiously-looked-for and much-required improvements, purposing to carry them out according to the plan in the Sixth Report of the Office of Works, *i. e.* connecting the Strand with the west end of Cheapside, proceeding at once with that portion between Carey-street and Fetter-lane. I therefore suggest that levelling the street should be made a principal feature, in order that so noble a thoroughfare as is contemplated may not be otherwise deteriorated, as in the case of common streets; to facilitate which, I propose a simple plan, viz. that every proprietor of the several buildings on the line of street should contribute to the work proportionately, either by labour under proper direction or by the value thereof. If adopted, it will be of great public benefit in preventing accidents, as well as materially adding to the effect of the street.—W. F. H.

ARCHITECTS IN BOLTON.—In the *Bolton Chronicle* of the 16th ult. I was struck with another of those very interesting accounts that have so lately opened the eyes of the profession to at least one subject connected with it, "competitions," and which you have so ably commented upon at different times. The report I refer to in the above paper is that of the Board of Guardians for the Bolton Union. It appears they are proposing to erect a new union-house, and after a series of squabbling meetings, have come to the resolve to advertise for plans for the same. So far good; but of course these worthy individuals do not do their business by halves: the architect's remuneration must form one item for their discussion, and accordingly they have arrived at the conclusion that 5 per cent. is far too much, and 2 per cent. is quite sufficient. I think such conduct as this of the Bolton guardians should not pass unnoticed, and I am sure I cannot do better than commit the matter to your notice (knowing your zeal in advocating the rights of the profession) to benefit my brother architects.

ONE OF THE VICTIMISED.

DISCOVERY AT MOYSE'S HALL, BURY ST. EDMUND'S.—An archæological discovery, of some local interest, has been made at Moyse's Hall, now occupied as the police-station. The question as to the connection of the eastern side of the adjoining inn with the western division of Moyse's Hall, has been settled by the discovery just made of the original staircase to the upper floor in the first arch between the western and middle alleys, with its perfect well, lighted by two small apertures, one pointed and the other square, and having a doorway into each alley. It is the intention of the authorities, it appears, to preserve this curious staircase, to remove the white-wash from the masonry, and to clear away such obstructions to the view of the whole crypt as can be removed without inconvenience.

SLAG, AS TO CASTING AND ANNEALING.—The liquid slag is conveyed to the casting-table, or mould, similar to metal casting, poured out, and immediately a heavy polished iron roller is passed over the whole surface; the roller rests on two edges, or grooves, equal in height to the intended thickness of the slab or tile, so as to spread out the mass into an equable sheet, and gives a flattened form to a shapeless yielding mass. The quantity of slag cast at once depends on the size of the table: as soon as the slag has solidified, the door of the annealing oven is opened, and the slab, or tile of slag, is thrust from the table into the oven. The ovens are very deep, so as to allow several slabs to lie in them edge to edge; and the oven is closed up very tightly when full, the heat allowed to decline gradually, so that by slow cooling the slag is annealed. On the floor of the building a railway is laid, along which the casting-table is wheeled from one oven to another, as it is necessary that the table should be placed close to the oven into which the slab is removed for annealing so soon as solidified. It will clearly be seen that this manufacture much resembles that of plate-glass, but does not require, in every stage, so much care, experience, and attention as to colour, freedom from specks, veins, wrinkles, mist, or cloudiness, but simply the manual labour of casting, rolling, or pressing into iron moulds of any form or shape, and annealing. As regards the simple manufacture of slag, after reading the evidence of Mr. Davison, of the Dowlais Ironworks, and others, and witnessing the samples produced at Dr. Smith's lecture, and the manufacture of the thin slabs, to represent slate, by Messrs. Chance and Co. who can doubt the practicability of the manufacture becoming general?—W. G. E.

RAILWAY SERVANTS.—It appears from a return just published, that on the 30th June, 1855, the following persons were employed on the railways of the United Kingdom then open for traffic:—viz. 204 secretaries and managers, 33 treasurers, 140 engineers, 356 superintendents, 193 storekeepers, 181 accountants and cashiers, 823 inspectors or timekeepers, 2,183 masters of stations, 322 ticket-collectors, 158 draughtsmen, 7,732 clerks, 1,132 foremen, 3,157 engine-drivers, 3,488 deputy-drivers or firemen, 3,237 guards or breaksmen, 21,247 artificers, 2,836 switchmen, 2,470 gatekeepers, 1,622 policemen, 14,498 porters, 7,172 platelayers, 22,449 labourers, and 2,324 miscellaneous adjuncts. This makes a grand total of 97,952 against 90,409 on the 30th June, 1854:—viz. 80,877 in England, 11,403 in Scotland, and 5,672 in Ireland. The length of line open for traffic was 8,116 miles, and the number of stations 2,798. The total number of persons employed on railroads not open, on the 30th of June, 1855, amounted to 38,546; the length of line in course of construction being 879 miles, and the total length authorized, 4,481. Of these 38,546 persons, 104 were secretaries, 16 treasurers, 181 engineers, 238 superintendents, 55 accountants, 331 inspectors, 61 draughtsmen, 110 clerks, 601 foremen, 216 policemen, 47 porters, 4,962 artificers, 31,370 labourers, and the remainder storekeepers, besides 171 adjuncts of no special vocation. The total number of persons employed on all railways, open or not, was, on the said 30th of June last, 136,498, against 135,810 in 1854: and of these 104,292 were employed in England, 17,388 in Scotland, and 14,818 in Ireland.

ECHO IN ROOMS.—A correspondent from the Menai Bridge asks for "some plan to lessen the echo in a school-room, the size of which is 53 feet by 30, 14 feet to the wall-plate, and 32 feet to the ridge, open-timbered roof, boarded floor, the windows having tumbler casements 6 feet above the floor." The judicious disposal of drapery in such cases often lessens the evil. We understand that a very remarkable cure of a similar annoyance has been recently effected by this means in the new vestry-hall at Paddington.

CAMBRIDGE ARCHITECTURAL SOCIETY.—At the first meeting of the Lent term, held on 20th February, the Rev. W. M. Campion in the chair, some notes on Mediæval illumination and Missal painting were read by Mr. R. W. Brundrit, of Christ's College, who exhibited some magnificent foreign specimens.

THE PLYMOUTH SCHOOL OF ART.—This school, according to the local papers, promises to be a successful undertaking. The accommodation at present provided does not meet the wants of the town, and the managers have been obliged to refuse admission to new applicants.

GREAT BLAST AT HOLYHEAD.—A blast which has required the labour of six men for the last ten months, and 6½ tons of powder to explode it, was let off in the quarry belonging to the new harbour works on Wednesday before last, in presence of the chief engineer and a numerous staff. It is calculated that the quantity of stone loosened by the explosion will be 60,000 tons.

NEW CHURCH IN SOUTHWARK.—A new church is to be erected in Union-street, Blackfriars-road, one of the worst parts of the densely-populated parish of St. George the Martyr, Southwark. The new church will be dedicated to St. Michael.

THE HOMES OF THE PEOPLE.—We may congratulate ourselves on the adoption of this subject for lectures. At Darlington, a few days ago, Mr. Joseph Pease delivered a lecture "On Homes and Habitations."

TENDERS

For West Bromwich Union Workhouse. Messrs Briggs and Everal, architects. Quantities supplied by Messrs. Batstone and Hunt:—

Wilkes, Dariaston	£20,830	0	0
McKenzie, Wellington	17,500	0	0
Hardwick and Son, Birmingham	17,212	0	0
Stokes, Birmingham	17,177	6	0
Wilson, Handsworth	16,896	0	0
Cox and Son, Tipton	16,812	10	0
Heritage, Handsworth	16,471	15	0
Trow and Sons, Wednesbury	16,083	10	3
Parnell, Rugby	15,039	10	4
Ferguson, Nottingham	13,950	0	0

For alteration of premises and building a warehouse for Messrs. W. and J. Freeman, 15, Millbank-street, Westminster. Mr. John Turner, architect. Quantities supplied by Mr. Charles Freeman:—

McCurry, Pimlico	£1,065	0	0
Nick and Son	1,054	0	0
Wilson, Pimlico	1,044	0	0
Tombs, Westminster	960	0	0
Wardle and Baker	900	0	0
Greig, Pimlico	826	0	0
Farmer, Westminster	825	0	0

For extensive alterations at the Devon and Exeter Hospital. Mr. J. Hayward, architect:—

Moass and Bradford	£9,350	0	0
Stafford	9,078	0	0
Mason	8,832	0	0
Ware (accepted)	7,948	0	0

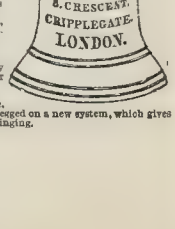
For plastering mansion for Mr. Hartley, at Fairy-hall, Mottingham, Kent. Mr. Thos. Turner, architect:—

Carter	£1,707	0	0
Denison	1,674	0	0
Pottifer and Sons	1,610	0	0
Todd	1,218	0	0

TO CORRESPONDENTS.

"A Bell" thanks!—"J. P."—"R. D. C."—"J. H. C."—"M. and N. H."—"J. D. J."—"E. A." (will find a reply as to clock tower on another page). "Inquirer" (we see no reason, in the statement given, why an architect who sends in two designs should not receive both 1st and 2nd premium).—"J. S. S."—"F. W. O."—"G. E. S."—"Subscriber from beginning."—"J. R."—"A. C."—"S. and H."—"W. O."—"P. G. S."—"G. K."—"E. W. T."—"W. B. A."—"J. B." Bells (in type).—"J. W." (ditto).

"*Books and Addresses.*"—We are forced to decline pointing out books or finding addresses.



NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

NOTICE.

FROM and after the 1st January, 1856, the *entire postage* upon all newspapers sent to France, and Foreign countries *via* France, must be prepaid: the stamped copy of the paper is of no avail.

ADVERTISEMENTS.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheels ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives superior tone and facility for ringing.

CLERK of the WORKS. — The Vestry of the Parish of St. Mary, Rotherithe, will meet on the 4th day of MARCH next, at the COMMITTEE-ROOM at the Workhouse, Deptford Lower-road, at HALF-PAST SIX o'clock in the evening precisely, to appoint a fit and competent person to execute the duties of CLERK of the WORKS for this Parish. Such officer will be required to reside in this parish, and to devote his whole time and attention to the duties of his office. The salary will be £1 15s. per week. A thorough and practical acquaintance with the making of drains, laying of drain-pipes, bricklayers' work, and other similar works, will be a necessary qualification. The duties can be ascertained on application at the Vestry Clerk's Offices, 61, Paradise-street, Rotherithe.—Written applications for the office, in the handwriting of the candidates, with testimonials, endorsed "Application for Office of Clerk of the Works," must be sent or delivered to the Vestry Clerk, on or before the 3rd day of MARCH next, and the candidate must attend personally at the time fixed for the Vestry.
By order,
R. SHAPTO HAWKS, Vestry Clerk.
Rotherithe, 22nd February, 1856.

CARPENTER WANTED, to undertake the REPAIRS of several HOUSES, &c. &c. A clever tradesman, with a good recommendation, and above the age of 40, only will be employed; also married, without family: the wife will have to take charge of a lodging-house, and must understand plain cooking, washing, &c. Wages, 24s. per week, and rent free. Apply, by letter only, to T. C. Office of "The Builder."

THE MERTHYR TYDFIL LOCAL BOARD of HEALTH are desirous of receiving applications for the appointment of SURVEYOR to the said Board. He will be required to give the whole of his time to the Board, receive plans for building, inspect and measure all work done by the Board and their contractors, make out the accounts, and perform the duties required by the Public Health Act. Salary, 120l. per annum.—Applications to be addressed to Mr. JAMES WARD RUSSELL, Clerk to the said Local Board, on or before SATURDAY, the 15th day of MARCH next.
Merthyr Tydfil, February 28, 1856.

AN APPRENTICE WANTED, by a Working Master, in the Plumbing, Painting, Glazing, Papering, Gas-fitting, &c. One who has a slight knowledge of the trade preferred. Address, J. H., 96, Castle-street, Leicester-square.

TO PARENTS AND GUARDIANS
WANTED, at a Patent Office in Chancery-lane, a well-educated Young Man, to LEARN the BUSINESS, who can write a good hand, and is quick and active in his habits. Good references are indispensable. No premium is required, his services being considered in lieu thereof.—Address, J. M. 29, Chancery-lane.

WANTED, in a Builder's Office, by a Surveyor, of many years' practice as a Measurer and Estimater of all kinds of building work; and thoroughly conversant in Book-keeping and Accounts, a PERMANENT SITUATION. A moderate salary only expected.—Address, A. B. Mr. W. Holmes, Plumber, &c. Church-street, Stoke Newington.

TO BUILDERS' CLERKS.
WANTED, by a London Firm, a steady YOUNG MAN, who has been accustomed to the routine of a Builder's Office. Application by letter stating age, particulars, and salary required, to be addressed to B. C. Office of "The Builder."

WANTED, by an Architect and Surveyor, in Norfolk, an ASSISTANT, capable of making working drawings (chiefly Gothic), measuring up work, and a little land surveying. The salary required, and present position, to be addressed, in writing only, to M. A. at the Office of Mr. Papworth, 14a, Great Marlborough-street, London, and none will be answered except those preferred.

WANTED, a Person of good practical experience in building generally, well understands working drawings, can design or copy, wishes to meet with a SITUATION as MANAGER, or INSPECTOR of WORKS, or the management of a builder's business, or a gentleman's estate. Would undertake to collect rents, keep accounts, &c. No objection to the country, or to go abroad. Unexceptionable references will be given, and good security for any situation of trust.—Address, A. B. to Mr Clark, News Agent, at the Crystal Palace.

TO BUILDERS
WANTED, a SITUATION, in a Builder's Office, by a Young Man, who is fully capable of taking out quantities, measuring up works, and the general routine of the office. References unexceptionable.—Address, S. S. 47, Essex-street, Strand.

TO CARPENTERS AND BUILDERS
WANTED, by a Young Man, aged 22, a SITUATION as IMPROVER in a Carpenter or Joiner's shop. Wages not an object.—Address, A. B. 3, Harvey's-buildings, Strand.

TO CARPENTERS AND BUILDERS
WANTED, by a steady, active Young Man, aged 22 a SITUATION as IMPROVER in a Carpenter's and Joiner's shop. Wages not so much an object.—Address, E. D. 35, Clark-street, Stepney, London.

TO MANUFACTURING UPHOLSTERERS AND HOUSE-DECORATORS.
WANTED to APPRENTICE, a genteel YOUTH, in an establishment where he will have the opportunity of obtaining a thorough practical knowledge of the various branches of the trades. A liberal premium will be offered.—Applications, by letter, to Mr. HENRY HODGE, Architect, 7, Castle-terrace, Keutish-town.

TO BUILDERS, CONTRACTORS, &c.
WANTED, by an experienced Man, a SITUATION as TIMEKEEPER, and to make himself generally useful in the counting-house. Wages, 26s. per week. Address, Z. Office of "The Builder."

TO ARCHITECTS AND OTHERS
WANTED, a SITUATION as OUTDOOR SUPERINTENDENT of WORKS, by one having a thorough practical knowledge of building in detail; at present acting up works and can make working drawings. Reference to Local and provincial architects, by whom he has been employed several years.—Address, J. B. 131, Albany road, Kent-road, London.

WANTED, a RE-ENGAGEMENT as CLERK of WORKS: a thorough practical man, having just finished large public works. The highest testimonials.—Address, M. A. at the Office of "The Builder."

TO BUILDERS AND PLUMBERS.
WANTED, a SITUATION as THREE-BRANCH HAND, by a Young Man aged 23. Has been fourteen years in the trade.—Address, H. R. Mr. Hellen's, 25, Gray-street, Webber-street, Blackfriars-road.

TO ARCHITECTS OR BUILDERS
WANTED, a SITUATION as GENERAL or WORKING FOREMAN of MASONS, by one of active business habits, good plain draughtsman, can take out quantities, set out work, &c. Testimonials and reputable reference from last employer.—Address, A. R. 16, North-street, Lambeth, London.

TO ARCHITECTS OR BUILDERS.
WANTED, by an experienced practical Man, a SITUATION as CLERK of WORKS, SHOP or GENERAL FOREMAN of WORKS.—Address, A. B 28, Gibson-street, Lambeth. Character will bear the strictest investigation.

TO SURVEYORS, CONTRACTORS, AND OTHERS.
WANTED, by a practical STREET MASON, a SITUATION as FOREMAN of FOOTWAYS and ROADS. The advertiser has had many years' experience in the above line, and can have good reference as to ability. Age, 40. Country not objected to.—Address, W. B. 13, Spring-garden-place, Elizabeth-street South, Pimlico.

NOTICE TO STEAM SAW-MILL PROPRIETORS.
WANTED, by a Young Man, a SITUATION as CIRCULAR SAWYER. Can work either segment or plate saw. No objection to town or country.—Address, post-paid, to W. D 32 Baring-street, New North-road, Hoxton.

WANTED, a SITUATION, as SHOP OUT-DOOR FOREMAN, or STAIRCASE HAND, by a steady Man, aged 34. Good reference given.—Address, S. H. E. J. Jackson, 2, Cumberland Row, Knightsbridge.

TO BUILDERS, PLUMBERS, PAINTERS, &c.
WANTED, by a married Young Man, aged 26, a permanent SITUATION as PAINTER, GLAZIER, and can do plumbing and paper-hanging; has no objection to doing general repairing. Wages, 4s. per day. Good reference can be given if required.—Address, A. B. C. 13, Norfolk-street, Shoreditch.

TO CARPENTERS, JOINERS, &c.
WANTED, to place a YOUTH as IN-DOOR APPRENTICE.—Apply to R. M. at the Office of "The Builder."

WANTED, a RE-ENGAGEMENT as SHOP FOREMAN, by an active Man, who has had a shop of from thirty to forty men under his management, also a steam saw-mill. Two years' character from last place of engagement.—Address, G. E. M. 2, Bear's-place, New North-road, Islington.

N.B. No objection to the country.

WANTED, by a Gentleman, aged 27, a SITUATION, in an Architect and Surveyor's Office, at the West end. Is desirous of draughtsman, has a fair knowledge of quantities but can finish up entirely. Salary, 100 guineas per annum.—Address, K. L. Office of "The Builder."

TO ARCHITECTS, SURVEYORS, OR ENGINEERS
THE Advertiser, who has just completed his articles, is desirous of IMPROVEMENT, and wishes an ENGAGEMENT. Has been in the above profession five years. Salary a secondary consideration.—Address, ALPHA, 4, Victoria-street, Paddington.

TO CIVIL ENGINEERS, ENGINEERING SURVEYORS, &c
THE Advertiser, who can undertake surveys, take levels, trace and "cut up" plans, with neatness and accuracy, is desirous of meeting with EMPLOYMENT, in either of the above professions. Salary is not an object. A reference can be given, and a testimonial of ability produced.—Apply, by letter, E. J. H. Post-office, 2, Upper Charles street, Westminster.

TO BUILDERS AND OTHERS.
THE Advertiser, aged 31, a thoroughly competent FOREMAN and CLERK, well versed with the general routine of building and office work generally, is a good draughtsman, quick estimater, measure up work, take out quantities, &c. &c. is desirous of an immediate ENGAGEMENT.—Address, W. H. at Campbell's Coffee-house, No. 3, Mount-street Lambeth.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.
THE Advertiser, an ARCHITECT and SURVEYOR, wants a SITUATION in either of the above Offices. Salary moderate. References given.—Address, pre-paid, BETA, at the Office of "The Builder."

THE Advertiser wishes to meet with a Person practically acquainted with the MANUFACTURE of GENDER, and willing to undertake the management of a mill. Address, J. H. care of Mr. John Bracher, 2, Walbrook-buildings.

TO ARCHITECTS AND SURVEYORS.
THE Advertiser is desirous of a SITUATION in either of the above Offices; is a good plain and perspective draughtsman, and accustomed to assist generally in taking out quantities.—Address, to the care of R. M. 34, Windsor-terrace, City-road.

TO ARCHITECTS
THE Advertiser, who has had fifteen years' experience, is desirous of a RE-ENGAGEMENT, in a London Office. Is well acquainted with colouring, perspective, mediæval, and Italian detail, and is considered a good draughtsman. References good. Salary moderate.—Address, Q. E. D. 8, Bloomfield-terrace, Pimlico.

THREE YOUTHS, from 14 to 18 years of age, required for an ARTIST'S STUDIO. None need apply but those who have a decided taste in that direction. No premium required, but specimens of ability absolutely requisite.
N.B.—Also two experienced Assistants in Oil Decoration.
Apply, from Ten to Four, at 8, Amelia-terrace, St. Peter's-street, Islington-green.

TO CONTRACTORS, BUILDERS, AND ENGINEERS.
THE Advertiser, having been engaged in superintending extensive works of this character, and thoroughly acquainted with measuring, valuing, and estimating all kinds of artificers' works, and making plans and working drawings of every description, is open to an ENGAGEMENT.—Address, E. L. at Mr. Nash's, Stationer, No. 4, Upper Weymouth-street, Marylebone.

TO BUILDERS, &c.
EMPLOYMENT WANTED in a BUILDER'S OFFICE, or to take charge of a small business, by an active middle aged man, who has a thorough practical knowledge of building in all its branches; can take out quantities, estimate, measure up and value works fixtures, and dilapidations, and wishes to make himself useful. Unexceptionable references for integrity and ability. Salary moderate.—Address, J. C. 3, Beech-lane, Beech street, Barbican. N.B. No objection to the country.

TO PARENTS AND GUARDIANS.
AN Architectural Firm in a good practice in the Midland Counties have a VACANCY for an ARTICLED PUPIL.—Address, Messrs. PARSONS and DAIN, St. Martin's, Leicester.

TO LAND SURVEYORS, AGENTS, AUCTIONEERS, &c. IN THE COUNTRY.
A TRADESMAN, who is prepared to pay a handsome premium, if adequate advantages are secured, wishes to PLACE his SON, nearly eighteen, for about three years, in a good ESTABLISHMENT, in a healthy part of the country (not in a large town), and where he would be boarded, lodged, and well treated on the premises. No sceptic or Papist need apply, nor any but principals.—Address, stating proposals, to T. B. Marylebone Literary and Scientific Institution, 17, Edwards-street, Portman-square.

TO ARCHITECTS.
A GENTLEMAN, desirous of improvement, who has had nine years' experience and understands perspective, wishes to meet with an ENGAGEMENT, in the Office of a London Architect, of good practice. Satisfactory testimonials can be given.—Address, M. C. Office of "The Builder."

TO ARCHITECTS.
A GOOD DRAUGHTSMAN, competent to make complete sets of working or finished drawings, in either Gothic or Italian, and per-pectives in outline or colour, is open to an ENGAGEMENT.—Address, M. 34, Albany-street, Regent's-park.

A GENTLEMAN, aged 30, a good Book-keeper, Accountant, Correspondent, and Draughtsman, desires an immediate ENGAGEMENT. Has just left the Metropolitan Board of Works, through a reduction of staff. Salary less an object than immediate employment. Superior references and testimonials.—Address, X. X. 11, Pembroke-terrace, Caledonian-road.

A GOOD and Practical DRAUGHTSMAN, accustomed to quantities, measuring up works, and land surveying, is OPEN to an ENGAGEMENT. Good references.—Address, W. H. J. 10, Stratford-place, Camden-town.

TO ARCHITECTS' ASSISTANTS.
AN ASSISTANT is REQUIRED in an ARCHITECT'S and SURVEYOR'S OFFICE. He must possess first-rate qualifications, and thoroughly understand levelling and land surveying.—Application, with testimonials, to be made by letter only, to A. B. care of W. Clements, Stationer, Wood-street, City.

TO ARCHITECTS.
A GENTLEMAN is desirous of a SITUATION in an ARCHITECT'S OFFICE, who has an extensive Gothic practice, as he is fully competent to take the entire management of that department. Is a good draughtsman, and can give unexceptionable references.—For further particulars apply to E P. 33, Bayham-terrace, Camden-town.

TO AUCTIONEERS, SURVEYORS, LANDED PROPRIETORS, AND OTHERS.
A GENTLEMAN, respectably connected, of considerable experience in building and house property in general, is desirous of an ENGAGEMENT, with a view to a partnership or otherwise. Has had the management of a large estate in the vicinity of London, in laying out ground, forming roads and sewers superintending advances to builders, and collecting ground-rents to a large amount; is also much acquainted with brickmaking. Unexceptionable references. Security, if required.—Address, O. G. Office of "The Builder."

A BUILDER'S CLERK, who understands taking out quantities, drawings, &c.; with the usual routine of the office, and practically acquainted with the building department, is desirous of an ENGAGEMENT in the above capacity.—Address, S. Barton's Post-office, Holloway.

TO BUILDERS.
A YOUNG MAN wishes to IMPROVE himself at the BENCH, for one or two years. Wages moderate.—Address, S. MONK, Plough, Old-road, Stepney.

AN ARCHITECT requires in his Office an experienced ASSISTANT,—not a mere Colourist or Draughtsman, nor a young man full of promise, but one who has the talent to design good and original Street Architecture, and who is practically qualified to carry out a work to completion, including plans, sections, detailed drawings, and specification, &c. Apply by letter, with full particulars, salary, &c. to F. G. at Warren's Library, London-street, Fitzroy-square.

TO ARCHITECTS, &c.
A NEAT and expeditious DRAUGHTSMAN is desirous of a RE-ENGAGEMENT in town. Understands the getting out of perspective, finished, working, and detail drawings, and the routine of an office. Good references.—Address, A. B. 9, Elizabeth-street South, Pimlico.

TO ARCHITECTS.
A YOUNG MAN who has been upwards of three years in the profession, and is acquainted with the ordinary duties of an office, as well as perspective drawing, &c desires an ENGAGEMENT.—Address SERLIO, care of Mr. C. Barker, 3, Brobin-lane, City.

A DRAUGHTSMAN and WRITER, for eighteen years past engaged by the most eminent engineers and surveyors, on extensive plans and drawings of every kind, is now OPEN to an ENGAGEMENT.—Apply by letter, to CYRUS, 15, Charing-cross.

A COMPETENT BUILDERS' CLERK, expert at measuring off works, taking out quantities, estimating, and the general routine of the Office, is open to a RE-ENGAGEMENT. Address, Mr. WRIGHT, 10, Crawford-street, Bryanston square.

TO CARPENTERS, &c.
A YOUNG MAN, aged 22, is desirous of learning the above trade. A premium will be given.—Address, S. S. Post-office, Woolford, Essex.

PELICAN LIFE INSURANCE COMPANY, established in 1797.
70, Lombard-street, City, and 57, Charing-cross, Westminster.

DIRECTORS.

Age.	Without Profits.	With Profits.	Age.	Without Profits.	With Profits.
15	£1 11 0	£1 15 0	40	£2 18 10	£3 6 5
30	1 13 10	1 19 3	50	4 0 9	4 15 7
35	2 4 0	2 10 4	60	6 1 0	6 7 4

For Prospectuses and Forms of Proposal, apply at the Offices as above, or to any of the Company's Agents.
ROBERT TUCKER, Secretary.

THE PERMANENT WAY COMPANY, 26, Great George street, Westminster, have now published a Second Edition of their CIRCULARS, which may be had post-free upon application. Among other recent important Inventions, the Company beg to call particular attention to Prime's Patent for Casting Railway Chairs, Pole's Patent Improved Fish Joint, and Dr. Boucherie's improved Process for Preserving Sleepers, Fencing, Telegraph Posts, &c from decay.—Every information may be had upon application to CHARLES MAY, F.R.S. the Manager; or to WILLIAM HOWDEN, Secretary.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Praed-street, Paddington.

BATH, PORTLAND, and ROMAN CEMENTS GROUND and LUMP HYDRAULIC BLUE LIAS LIME.

The LONDON and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being excavated in its pure and unadulterated state, from quarries on their own property. The Company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or shipped from their wharf, direct to all parts.—Agents required, and a liberal discount allowed. Orders received by Mr. RIALLMARK, 80, Old Broad-street, City, or by RICHARD WINTER, Cement Works, Dunball, Bridgewater.

BATH CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

PORTLAND CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL, Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Firebricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Fozzolano.

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON.
BRICK, LIME, and CEMENT MERCHANTS,
SOUTHAM BLUE LIAS LIME DEPOT.

Bath, Portland, Lias, and Roman Cements; Parian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewage Pipes, Fire Goods, Vitrified Blue Bricks, White Building Bricks, White Enamelled Pans and Traps, and every description of Building Material.

N.B. Lump and Ground BLUE LIAS LIME delivered in boat-loads direct from the Works in Warwickshire, to any part of the river or canal.

SOUTHAM BLUE LIAS LIME DEPOT, No. 14, SOUTH WHARF, PADDINGTON.

TATHAM & CO. have REMOVED to the commodious supply of the above very superior BLUE LIAS LIME, which for the last two years has been extensively used at most of the large works constructed during that period, are now in hand, and any orders they are favoured with will command their best attention.

Boat-loads of either Lump or Ground Lime can be delivered direct from the Works in WARWICKSHIRE to any part of the Rivers Thames or Lee, alongside any wharf on canal, or by boat or rail to any part of the kingdom.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders addressed to No. 14, SOUTH WHARF, PADDINGTON, will receive the best and most prompt attention.

31, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers extensively supply the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, the heaviest concrete, or plain work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Accounts of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be altogether avoided. This White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped HUBBUCK LONDON PATENT. And when so marked, the quality is guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BOORMAN, WILD, and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their contiguity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confidently hope they shall be able to supply the public with a first-rate article, in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be affixed to the head of each cask. Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.

Agents in London: Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

DOVERCOURT CEMENT WORKS, HARWICH, ESSEX.

JOHN PATTRICK being now the only ROMAN CEMENT Manufacturer at Harwich, hereby informs the public that he continues to carry on a Wholesale Business, and offers to Contractors, Builders, &c. by the freight or half freight, ROMAN CEMENT of best quality upon advantageous terms.—Application either at Harwich or to his Agent, GEORGE MORRIS, 30, New Ormond-street, Queen-square, London.

P.S. Inland London trade will in future be supplied from Messrs. ROBINS and CO. Scotland-yard, Westminster, instead of Whitefriars.

NOTICE.—BLUE LIAS LIME.—L. B. PEARSE and CO beg to inform Architects, Engineers, Builders, and Contractors generally, that they have now accepted the AGENCY for the above valuable HYDRAULIC LIME, from the original quarries, Stockton, Warwickshire, and are now supplying direct from the works in their own boats, at a reduced rate.

L. B. PEARSE and CO. beg further to give notice to consumers, that they have erected, at a considerable expense, large buildings and machinery for grinding lime and cement, so as to insure genuine quality and large supply, at their extensive premises, situate on the Great Northern Railway, York-road, King's-cross.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Three Grey Stone, or Grey Chalk, free on board at Works, 1s. 5d. per ton.

Small ditto, ditto, 4d. per ton.

Barges loaded in a few minutes.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London. March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GIBBS, CANNING, and CO.'s BLUE VITRIFIED BRICKS, PIPES, TUNNELS, BENDS, and FIRE GOODS.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

GREAVES'S BLUE LIAS LIME.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

NOTICE.

SOUTHAM HYDRAULIC BLUE LIAS LIME.

WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump into boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants Builders, contractors, and others supplied with every description of building material at the lowest market prices.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH (perfectly non-absorbent) STUCCO CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road. Office, 4, George-yard, Lombard-street.

BRICKS, LIME, WHITING, TILES, FLINTS, GRAVEL, &c.—Messrs. MEESON and CO. supply stocks, plokings, rough stocks, place, red kiln bricks, pavions, &c. &c. on low terms, to any part of the Thames, the various canals, the River Lea, &c. or by rail to any station on the Eastern Counties line, or any railway connected with it. Also, flints for building boundary walls, stables, cottages, &c. by using which one-third of the expense may be saved. Also, lime, chalk, chalk rubbish, gravel, loam for foundries, &c. &c. Whiting of the best quality, lime, and white pebble flints, fire-stones may be obtained at Messrs. MEESON'S Wharf Kilns at Bow-bridge, Stratford, Essex; or from the Works at Gray's, Essex.—Orders, by letter, to Messrs. MEESON and CO. Gray's, Essex, executed with despatch.

REMOVED FROM CRITCHILL-PLACE, NEW NORTH-ROAD HOXTON.

BRICK MOULDS (improved), Steel-face Stocks and Plates, with Screw Stock Pegs, used four seasons. Various sizes kept on hand. References where in use. Brick Mill Work and Implements.—J. LEACH, Millwright and Engineer, 9, St. Peter's-square, Hackney-road, London.

THE BEST HERTFORDSHIRE MALM SECONDS:
THE BEST WHITE SUFFOLK and RED FACINGS:
DEEP-RED RUBBING BRICKS.
Also COWLEY and KENT STOCKS, in any quantity.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY
(Within a short distance of the five bridges).
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

WHITE SUFFOLK PERFORATED BRICKS.—Messrs. J. EASTWOOD and SONS take this opportunity of informing their customers and the trade, that they have made arrangements for the Manufacture of White Suffolk Perforated Bricks. In curing defects common to bricks of this description, care has been observed to produce them of a true and perfect shape, of an even and beautiful surface, and free from fire-flawns.—J. EASTWOOD and SONS, Belvedere-road, Lambeth.

WHITE SUFFOLK and RED FACING BRICKS.
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malms, Seconds, Cutters, Paviors, Shippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE, 5, ADELAIDE-PLACE, London-bridge.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. D. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

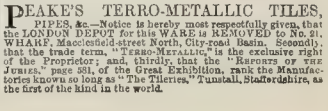
Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Orange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

CHEAP WHITE BRICKS for FACING HOUSES (Beard's Patent).—These Bricks are of excellent make and colour, are imperishable from frost.—For particulars, apply PATENT BRICK WORKS, Lawford-road, Rugby.

THE PATENT BRICK-MACHINE COMPANY invite orders for their IMPROVED MACHINES, the only ones that manufacture solid bricks equal to hand-made, will actually be at work in a field near London, accessible by railway, where it may now be seen with bricks of last season.

H. C. MOUNT, Secretary.
37, King William-street, City, February, 1856.



PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of as fine quality as hand-made, with 3-horse power; one man to feed the machine with clay, and boys to remove the bricks. For a plate and description, see "Practical Mechanic's Journal," for January 1st, 1856.—And further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

BRICKMAKING by MACHINE, awarded the Gold Medal of Honour, at the Paris Exhibition.—To CONTRACTORS, BRICKMAKERS, and EXPORTERS.—CLAYTON'S PATENT BRICKMAKING MACHINE combining his recent improvements, will be in operation for public view, on MONDAY and TUESDAY next (the 3rd and 4th of MARCH), at the Manufactory, Atlas Works, Upper Park-place, Dorset-square, London. HENRY CLAYTON, Patentee.

TO BRICKMAKERS.—For SALE, a quantity of IRON WHEELING PLATES, navvies' barrows, wheels, &c.—Inquire of H. HARGRAVE, 82, High-street, Shadwell.

TO BRICKMAKERS and BUILDERS.—TO BE SOLD, a BRICKFIELD, in IPSWICH, consisting of superior WHITE and RED EARTH. There are about 3½ acres of land, a good cottage, tile shed, kiln, all the plant, and 30,000 of earth raised.—Apply to WM. P. RUDKINS, Ipswich.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 7d. per foot; above 100 feet, 6d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. R. LAWES, 1, Adelaide-place, London-bridge. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Tewkesbury-road, Badge Farm, London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 361, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTERS' PATENT WIND-GUARD. This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at his Office, 85, Fenchurch-street, London.

By Her Majesty's — Royal Letters Patent.

DUPREE and CO.'S DEFIANCE WINDGUARD and VENTILATORS, &c. for the perfect cure of Down-draft Smoky Chimneys, suitable for Public and Private Buildings requiring a constant change of air.

Also

SHIP VENTILATORS, requiring no attention, imparting about six times the quantity of fresh air than any other in use.

Also

VENTILATING ROOFLIGHTS, for Slate or Tile Roofing, without Paint or Putty.

Prospectuses sent on application.

London Depôt—ESNOUF and MANGER, 141, Minories, City.

HANDS'S PATENT ECONOMISING KILN is the only simple and effectual mode to use the heat, for drying moist moulded clays, stand at any season, in time of burning and cooling the kiln, with perfect ventilation.—Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

TO THE COMMISSIONERS OF THE BOARD OF HEALTH AND TO ALL PERSONS INTERESTED IN THE SMOKE QUESTION.

HANDS'S PATENT is the only simple and certain remedy for the SMOKE NUISANCE: it has combined, where necessary, the advantages of a draught process and perfect ventilation, without a particle of complicated machinery. Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

CHAS. MACINTOSH and CO. Patentees of the VULCANIZED INDIA-RUBBER, and GENERAL MANUFACTURERS of WATERPROOF, AIRPROOF, and ELASTIC RUBBER GOODS beg to inform all persons who desire to correspond with them direct, that their SOLE ESTABLISHMENTS are No. 3, Cannon-street West, London, and Cambridge-street, Manchester. This notice is necessary, as the term "Macintosh Depôt, Macintosh Warehouse, &c. is frequently adopted both in London and the country by vendors of India-rubber goods, who deal in articles not of the manufacture of CHAS. MACINTOSH and CO.—Goods manufactured by CHAS. MACINTOSH and CO. are stamped with the name of the firm.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT. —Second Testimonial.—"March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

TO ENGINEERS, MILL-OWNERS, &c.

N. Woolwich Elastic Steam-packing, Canvas and India-rubber), at 1s. 4½d. per lb.

S. W. SILVER and CO. INDIA-RUBBER WORKS, North Woolwich (opposite H. M.'s Dock-yards), having considerably extended their manufacture in order to meet the daily increasing demand upon them for this effective and durable article, are enabled to offer the very best material at the reduced price of 1s. 4½d. per lb. for sheet and rope.

Testimonials may be seen at S. W. SILVER and CO.'s Warehouses, Nos. 3 and 4, Bishopsgate-street (opposite London Tavern), where orders for Steam Packing, also Buffer Springs, Pump Clacks, and the various India-rubber appliances, will meet with prompt attention.

CAUTION.—S. W. S. and Co. have found it necessary to stamp all their manufacture, thus—"S. W. SILVER and CO. WORKS, NORTH WOOLWICH."

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Bed-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagnelle tables.

Diving-dresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.

Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions, Inflatable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.

N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 60 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster.

No. 1 quality, inches diameter, and price per yard.

⅜	½	¾	1	1¼	1½	1¾	2	2¼	2½	2¾	3 in.
9d.	11d.	1s.1d.	1s.3d.	1s.5d.	1s.7d.	1s.9d.	2s.	2s.3d.	2s.6d.	2s.9d.	

Super-extra stout quality.

2	2¼	2½	2¾	3 inches.
2s.	2s.3d.	2s.6d.	2s.9d.	3s. per yard.

No. 0. A cheaper hose, to bear a low pressure for gardens and agricultural purposes, at greatly reduced prices.

1	1¼	1½	2	2½ inches.
9d.	10d.	11d.	1s.	1s.3d. 1s.6d. per yard.

The hose is Burnettized at an extra charge of 3d. per yard. Union Joints, Branch Pipes, and Jets, are also supplied.

MANUFACTORIES—65, PRINCE'S-STREET, LAMBETH, and BRUNTON'S WHARF POTTERIES, COMMERCIAL-ROAD, LIMEHOUSE.

Terra-cotta Chimney-pots of various patterns and sizes, also Red Earthenware Drain-pipes, at greatly reduced prices.

R. RICHARDS and CO.
PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barves, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 18-in. diameter, kept ready for use at reduced prices.

N.B The above can be worked either by hand, horse, or engine power.

Iron Pails 12s per doz. painted.
Ditto ... 14s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to JOHN WARNER & SONS'

PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating lever, the cumbrous entrance and expensive slings and guides are unnecessary, rendering the price considerably less than Pumps made on the old plan.

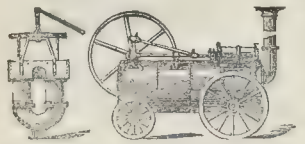
Lifting and Force Pumps for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

B. FOWLER & CO.'S PORTABLE PUMPS,

3-inch to 9-inch Barrels.

Plain or Sliding Telescope Suction,



ON HIRE.

SINGLE AND DOUBLE PUMPS,
all sizes,
to any depth, for Hand or Steam Power.

Patent Double-action and General Pump-makers, Builders' Smiths, &c.

WHITEFRIARS-STREET,
Fleet-street.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars Bridge (Surrey Side).

STEAM-ENGINES on SALE, new and second-hand, from one to twenty horse power, a 10-horse Jukes' smoke burner, and a variety of machinery, consisting of boilers, tanks, three-throw pumps, lathes, planing and drilling machines, screw presses, a 30-inch paper-cutting machine, &c. &c Apply to D. W. ASH, 187, Southwark-bridge-road, Newington Causeway, where the above can be seen.

PUMPING and WINDING ENGINE.—TO BE LET on HIRE, or for SALE, a nearly new strong and simple PUMPING and WINDING STEAM ENGINE, of 10-horse power, by Medwin and Hall, with a pair of 10-inch pumps and all the driving gear complete. The contractor for whom it was fitted up will make a considerable sacrifice on the cost price, or let the whole on hire.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, 92, Blackfriars-road.

STEAM-ENGINES for SALE.—A Six and a Ten horse High-pressure. Also, a Donkey Engine.—Apply to JOHN DUFF and CO. Engineers, Glasgow, Makers of Land and Marine Engines, Boilers, Derrick and other Cranes, &c.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns, commencing at 3s per foot super together with every requisite for its correct and adaptation, can be obtained of Mr. BUFF, 2, Charlotte-row, Mansion House, or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

SUPERIOR LAND DRAINAGE.—AGRICULTURAL DRAIN-PIPES of all sizes, and in any quantities, can be SUPPLIED, either by water or land carriage, at a reduced rate, by applying to L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

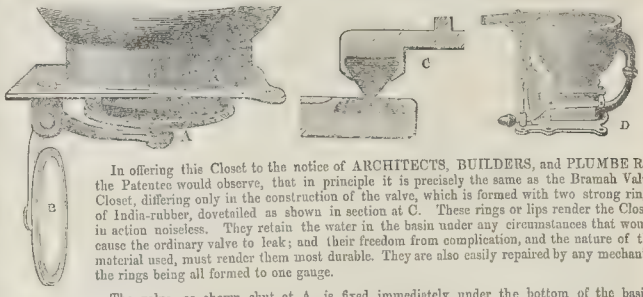
By her Majesty's  Letters Patent.

THE PATENT ARCHITECTURAL POTTERY COMPANY, POOLE, DORSET, Manufacturers of PLAIN, GLAZED and COLOURED BRICKS, CASINGS, &c.; also of Patent TESSELATED, MOSAIC, and other FLOOR TILES. The above Bricks are for the exterior and interior of buildings, conservatories, baths, reservoirs, &c. They are of the nature of superior Dutch Clinkers, and vitrified throughout. The object of the Patentees in producing these articles is to supply a brick which will not absorb moisture, and which will resist the action of the strongest acids. The tiles are made of the same material, and possess the same properties. The Patentees have also introduced a method of producing Bricks and Tiles of any required colour throughout the body, so that they may be cut or worked to any pattern without destroying the colour. The Patentees are prepared to execute orders for the above goods to any extent, and to any design. The Bricks are manufactured to any size, and shapes, glazed or not, may be had at a few days' notice. For samples, prices, &c. address the Secretary to the Company, as above.

JENNINGS'S PATENT DRAIN-PIPES.

For full particulars of these Pipes, and their advantages, AS COMPARED with the old-fashioned Socket and Half-Socket Pipes, see *Builder* of February 9.

For testimonials, &c. see *Builder* of the 9th, 16th, and 23rd ult.



Architects and Engineers describing these Pipes in their specifications will have the GREAT satisfaction of knowing that, in case of stoppage, they afford every facility for examination, as also for the introduction of Junctions, &c. without the slightest disturbance to the Invert or General Drain.

Prices per foot run, including the Patent Chairs and Saddles:—

4-inch.	6-inch.	9-inch.	12-inch.	15-inch.
6d.	8d.	1s. 1½d.	1s. 10d.	3s.

THE USUAL TRADE DISCOUNT ALLOWED.

JENNINGS'S PATENT DOUBLE-SEATED VALVE-CLOSET.

In offering this Closet to the notice of ARCHITECTS, BUILDERS, and PLUMBERS, the Patentee would observe, that in principle it is precisely the same as the Bramah Valve Closet, differing only in the construction of the valve, which is formed with two strong rings of India-rubber, dovetailed as shown in section at C. These rings or lips render the Closet in action noiseless. They retain the water in the basin under any circumstances that would cause the ordinary valve to leak; and their freedom from complication, and the nature of the material used, must render them most durable. They are also easily repaired by any mechanic, the rings being all formed to one gauge.

The valve, as shown shut at A, is fixed immediately under the bottom of the basin. B shows the valve open, the centre or flat part being filled in with enamelled ware, made to correspond with the basin it may be fixed under. D is an elevation of the Closet finished, and it is made to work with or WITHOUT wires and cranks, according to the situation it may be fixed in, EXPOSED TO FROST OR OTHERWISE.

G. JENNINGS has such confidence in this Closet, that a written warranty for seven years will be given with every Closet sold.

Illustrated Particulars and Prices of JENNINGS'S Self-acting and other Water-closets, Urinals, Lavatories, Pumps, Sluice-valves, Fire and other Cocks, Gully-traps, Shop-shutter Shoes, Earthenware Drain and Soil Pipes, &c. &c. can be had free, on application, or by post, on enclosing two stamps to

GEORGE JENNINGS, SANITARY ENGINEER, GREAT CHARLOTTE-STREET, BLACKFRIARS.

ESTABLISHED, 1795.

JOSEPH CLIFF,

WORTLEY, NEAR LEEDS, YORKSHIRE.

London Wharf, No. 4, Great Northern Goods Station, King's-cross,

M. B. NEWTON, Agent.

MANUFACTURER OF GLAZED STONEWARE TUBES, SOCKET, HALF-SOCKET, OR BUTT-JOINT; BENDS, SUCTIONS, TRAPS, INVERTS, URINALS, CLOSETS, &c.

CIRCULAR PIPES, from 2 inch to 54 inch diameter.
EGG-SHAPED, from 6 by 4 inches to 36 by 28 inches.

The Proprietor begs to call the especial attention of Engineers and Surveyors to HIS LARGE PIPES for DRAINAGE and WATER-CONDUITS, which can be made of any required strength or thickness.

FIRE CLAY RETORTS have been made at these Works for UPWARDS OF THIRTY YEARS, and have attained to the highest excellency, both in quality and internal smoothness; respecting which unexceptional reference can be given.

Bricks, Lumps, Tiles, Chimney-Linings, Terra Cotta. Chimney-Tops, Windguards, &c. &c. also in Stock.

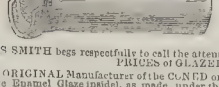
GREAT REDUCTION IN GLAZED STONEWARE PIPES.

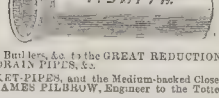
STEPHEN GREEN,

IMPERIAL POTTERIES, LAMBETH.

S. G. wishes to call attention to his WHOLE and HALF-SOCKET PIPES, made on the principle of PILBROW'S IMPROVED REBATED SOCKET-END, which fully secures a joint free from obstructions, and meets the demand for removing Pipes at any point.



5s. 6d. each; if fitted with PATENT AIR-TIGHT VALVES, 1s. 6d. each extra.



Also to his IMPROVED REGISTERED CLOSET-PAN, with an impervious White Glaze inside, and formed to insure a Flush of Water over the entire Internal Surface. Made with or without STEPHEN GREEN'S PATENT AIR-TIGHT VALVE on the top of the Trap.

N.B. Prospectuses, with Prices and Terms, forwarded post-free, as also Prospectuses of STEPHEN GREEN'S PATENT SELF-ACTING FLUSHING CLOSET, complete, with Seat and Riser, &c.

GREAT REDUCTION IN PRICE OF SMITH'S DRAIN-PIPES.

THOMAS SMITH begs respectfully to call the attention of Contractors, Builders, &c. to the GREAT REDUCTION in his PRICES of GLAZED STONEWARE DRAIN PIPES, &c.

T. S. is the ORIGINAL Manufacturer of the CURVED or REBATED SOCKET-PIPES, and the Medium-backed Closet-pans (with superior White Enamel Glaze inside), as made under the direction of Mr. JAMES PILBROW, Engineer to the Tottenham Local Board of Health, with which he is now supplying several large towns.

N.B. Half-socket Pipes same prices, which obviate all difficulty arising AT ANY TIME from the Inspection of Pipes in the event of the unusual circumstance of a Stoppage occurring, or a Junction being required to be inserted.

DRAWINGS AND LISTS OF PRICES FORWARDED FREE ON APPLICATION.

MANUFACTORIES,—71 and 72, PRINCES-STREET, LAMBETH; and ALBION POTTERY, OLD FORD, BOW.

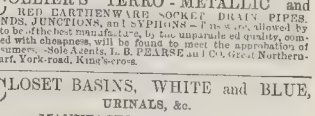
PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 29, Old Fish-street, near St. Paul's, London.—Price for Closet and Apparatus complete, from 25s. and perfect action guaranteed.

SUPERIOR STONEWARE GLAZED PIPES of a quality not to be surpassed—I. and W. STURGE respectfully invite attention to the very superior character of their stone ware, which for cheapness are such as must give great satisfaction,—the price being also lower than many in the trade, viz. 2½ per cent. discount off the list for cash. Junction Bends, &c. Traps and Gags of the first quality. Yorkshire Paving, Sinks, Sills, &c. all at low cash prices.—I. and W. STURGE, Bridge Wharf, City-road.

N.B. A small extra charge is made upon goods required to be delivered.—October 1, 1855.

LYTCHETT POTTERY.—For SALE by PRIVATE CONTRACT, the LEASE and PLANT of the above Premises. The lease consists of about forty-seven acres of land and a good cottage. The land contains a large quantity of very superior clay for pottery and fire goods. The drain-pipes made from the clay are equal, if not superior, to any yet in the market; and the bricks also will bear comparison with any yet made. The plant comprises three pottery kilns and two brick kilns, with pipe machines, pug-mills, and all other necessary apparatus. Lytchett Pottery is 9 miles from the South Western Railway, and 3 miles from the port of Poole. For further particulars, and to view, apply to H. P. FISHER, Bramford.

GREAT REDUCTION in the PRICE of STONEWARE POTTERY from this date.



VICTORIA POTTERY, LEIGH, near SOUTHEND; London Establishment, Falcon Wharf, Bankside. DAVID MOUNTAGUE, Manufacturer of every article of Lambeth POTTERY, having now further reduced the prices, begs to direct the attention of Builders, STONEWARE PIPES &c. &c. on the most advantageous terms. The new lists of prices will be forwarded on application as above.—Feb. 11, 1856.

IN BANKRUPTCY.—WITHOUT RESERVE TO TIMBER MERCHANTS, SHIP-BUILDERS, BUILDERS, CARPENTERS, &c. &c.

MR. NEEMAN is instructed by the assignees of Messrs. Fossey and Steel, bankrupts, to SELL by AUCTION with reserve, on the PREMISES, Norway Wharf, Millwall, Poplar, on TUESDAY, MARCH 11th, at SEVEN o'clock precisely, all the extensive and valuable STOCK-IN-TRADE, comprising a variety of Baltic and foreign timbers and small deals, Norway and other spars, Memel in logs, &c. planks, and cut into scantlings, boards, battens, prepared well in and cut into scantlings, boards, battens, prepared yellow and white deals, lining boards, Dantzic lights, oak laths, &c. also a four-wheel phaeton, timberjarris, carriage, and other trade implements, sundry timber fittings, &c. &c.—May be viewed two days previous to, and morning of sale, and catalogues had on the Premises, and of the Auctioneer, 3, Crooked-lane, London-bridge.

TO LAND and BUILDING SOCIETIES and OTHERS.—Votes for the County of Kent.—Eligible Freehold Building Land, land-tax redeemed, near to the entrance-gates of the Royal Arsenal, Woolwich.

MESSRS. CHURCH and SON are favoured with instructions to OFFER FOR SALE, by PUBLIC AUCTION, at the TOWN HALL, Greenwich, on THURSDAY, MARCH 13, 1856, at THREE for FOUR o'clock in the afternoon, SEVENTY-SEVEN PLOTS of Valuable BUILDING LAND, in convenient lots, to be let, most eligibly situated on the high-road, Plumstead, within five minutes' walk of the Lower Entrance-gates of the Royal Arsenal, and immediately adjoining the local station of the North Kent Railway. This land offers advantages to large and small capitalists rarely to be met with. It forms part of the Griffin farm and gardens, it is in high state of cultivation, and is pleasantly situated on light gravel. Each lot will have a frontage on an excellent new road, which it is proposed to extend to Plumstead-common, as a direct communication from Plumstead road, and will or title the purchaser to a vote for the county of Kent. Plans, with particulars and conditions of sale, may be had on the Premises; of Mr. H. Davis, Solicitor, Red Lion-square, Holborn; at Garraway's Coffee House, Cornhill; Robson's Rooms, London; and of the Auctioneers, Woolwich and Blackheath.

SALES BY AUCTION.

CHELMSFORD, ESSEX.—To Shippers, Colonists, Schools, and Public Establishments.—To BE SOLD by AUCTION, at CHELMSFORD, on the Premises of the Patent Oven Company.

VALPY and STOKES, on THURSDAY, 6th MARCH, 1856, by order of the Proprietors, about FORTY of FITCH'S PATENT OVENS, in lots, for immediate clearance; also, a quantity of Old Iron, Smiths' Tools, Fixtures, Sash Weights, Grindstones and Sundries. These well-known and valuable Ovens are in use, from the No. 1 to No. 4 size, and will take four or FIVE dozen 4lb. loaves each. Purchasers may depend on their being sold without reserve, as the Premises are to be cleared for a large family. The No. 2, which is calculated to cook for 150 persons daily; and they are constructed in a most substantial manner, of cast and wrought iron, with the best workmanship. Within view of the Steamers and Colonists' Catalogues may be obtained of the Auctioneers, Chelmsford, Essex.

NOTICE to CABINET-MAKERS.

MAHOGANY and TIMBER MERCHANTS, &c.—The new LIVERPOOL PERIODICAL SALE by AUCTION of MAHOGANY and other TIMBER, Woods and Dye-logs at Liverpool, will take place on FRIDAY, the 7th MARCH, at TWELVE o'clock at noon, in the Brokers' Sheds, Brunswick and Toxteth Docks, Liverpool.—For catalogues containing full descriptive particulars, apply to EDWARD CUNNIS, Broker, 6, East Side, Queen's Dock, Liverpool.

TO TIMBER MERCHANTS, SHIP and COACH BUILDERS, CABINET-MAKERS, JOINERS, ASH and other TIMBER, TO BE SOLD by AUCTION, by

MR. T. BAXTER, on TUESDAY, MARCH 4th, 1856, at TWO o'clock, at the GEORGE INN, Beckenham, Kent; comprising Thirty very fine large Elm Trees, and Forty fine Thirty-five feet Ash ditto. Two large Beech, and Three fine large Limes, Horse Chestnut, &c.; all recently cut down, and lying on Beckenham Park Estate at Beckenham, Kent. May be viewed two days preceding the Sale by applying to Mr. Winson, Kent-house-road, near Penge; or to the Carpenter on the Estate, Yard near the Lodge; at Lamplounes Inn at the Lower Castle, Deptford; Crooked Billet, Penge; at the Place of Sale; and of the Auctioneer, 4c Burnley, Kent.

ESSEX and MIDDLESEX.—Paulshim Lodge, Dagenham.—Valuable Detached Enclosure of Arable Land, and Five Houses in the Rectory-walk and Church-walk.

MESSRS. BRUEL and SONS have received instructions to SELL by AUCTION, at the MART, London, on TUESDAY, MARCH 25, at TWELVE, a very desirable VILLA RESIDENCE, known as Paulshim Lodge, with convenient requisite outbuildings and useful fruitful kitchen grounds, together with a small pasture adjoining, pleasantly situate in the Church-walk, within the manor of Dagenham, four miles from Romford, and 14 from Ilford, at both of which are stations on the Eastern Counties Railway; a valuable detached enclosure of productive Arable Land, known as Mill Field, containing 8a. 3r. 3p., in the occupation of Mr. Thomas Ware, at 12l. per annum; also, a desirable Leasehold Property, comprising five houses in Oldham-gardens, Basingstoke-road, Clerkenwell, let to respectable tenants at rents amounting to 24l. 10s. per annum. Possession of the residence and the land upon completion of the purchase. Particulars and plan may be obtained of Messrs. DAVIDSON and BRADBURY, Solicitors, 18, Basinghall-street; at the Auction Mart; and of Messrs. Farrer and Sons, 25, Gresham-street.

Sixth Sale of the Surplus Property belonging to the North London Railway Company, with Votes for the County of Middlesex.

MESSRS. BEADEL and SONS have received instructions from the Directors of the above Company to SELL by AUCTION, at the MART, on TUESDAY, MARCH 11th, at TWELVE o'clock, in 28 Lots, the North Portion of the valuable FREEHOLD SURPLUS PROPERTY adjoining the Railway, Camden Town, comprising several freehold Plots, let on rents amounting to 62l. per annum; also well-placed ground-rents arising from houses in Bromley-place, Great and Little Royal Ingleside-ps, Grimes-street, and Frederick-place. Also Shepherd's Nursery, and a plot of Freehold Land in Hollingbourne-lane, Balsam. Particulars may be obtained of Messrs. Tanner, Pearman, Hart, & Sons, Solicitors, Guildford-street; of Messrs. Rosser, 10, Camden-crescent, Camden-town; at the Auction Mart; and of Messrs. Beadel and Sons 25, Gresham-street.

Extremely valuable first-class Freehold Building Ground, Camberwell, Surrey.

MR. LEIFCHILD has received instructions for the undermentioned SALE by AUCTION, at GARRAWAY'S, on TUESDAY, MARCH 11, at TWELVE PRECISELY, in one lot, a very important FREEHOLD ESTATE, containing about 8a. 2r. 32p. of productive pasture-land, on the south side of Peckham High-road, in the parish of St. George Camberwell, this most desirable property abuts on the Lordship-lane, and Southgrove, and on a public footpath from Grove-hill; its situation is eminently agreeable and salubrious, being in the immediate vicinity of Camberwell-grove, Champion-hill, and Denmark-hill, directly fronting East Dulwich, with a fine view of the Crystal Palace. Every part of this valuable estate is peculiarly adapted for building purposes of a high character, for, in addition to its delightful and healthy aspect, the convenient extent of area so near to London, it contains rich earth, capital quality, and two good roads through it, with the necessary sewers in a great depth, which, from a careful anticipation of the daily increasing demand in this popular and healthy district for residences of a superior class, will be found ready for immediate use, and, upon a close inspection, with particulars and conditions of sale, may be had at Garraway's; of Messrs. Davidson & Bradbury, Solicitors, 18, Basinghall-street; of Mr. Russell, Solicitor, 59, Coleman-street; and at the Offices of Mr. Leifchild, 69, Moorgate-street City.

FARRINGDON STREET EXTENSION.—Building Materials of Ten Houses.

MESSRS. PULLEN and SON have the honour to announce that they will SELL by AUCTION, on the PREMISES, on MONDAY, MARCH 3rd, at TWELVE, in Lots, by order of the Improvements Committee of the Corporation of the City of London, all the valuable BUILDING MATERIALS of TEN HOUSES, SHOPS, and PREMISES, in Tallmadge-street and Peter-street, Frederick-well, comprising 300 loads good bricks, slate and pan tiles, and slates, capital oak and fir timber, in roofs and floors, sashes, doors, partitions, floor boards, shop fronts, lead gutters and pipes, stone paving, shell copers, gasfittings, and various useful trade fixtures; also, two large iron doors, 6 feet by 2 feet 6 inches and stone-work of strong room, Leslie's gas purifier in one case, two pier glasses, a counter three large carved oak mantels, 30 brass lamps, and sundry surplus stores. May be viewed on Saturday. Catalogues had at the Architect's office, Guildhall; and of Pullen and Son, 80, Fore-street, Cripplegate.

TIMBER SALE.—At GARRAWAY'S Coffee House, Change-alley, Cornhill, on FRIDAY, 7th of MARCH, 1856, at FOUR o'clock precisely, 100,000 Baltic and Co quail Deals and Battens, 500 loads of Baltic and Colonial Timber, with other wood goods. Further particulars, and Catalogues to due time, by CHURCHILL, MACMILLAN, & Co. Wood Brokers, 3, Cannon-street.

TO BE LET by TENDER, on a Rebuilding Lease, certain PROPERTY, situate in the front of Heathstreet, Barking-side, Essex. For further particulars, apply to JOHN PERKINS, London-wall.

SUPERIOR BUILDING LAND TO LET, near Carlton-hill, St. John's Wood, and Kilburn-gate; 110 feet above the Thames; commanding views of Hampstead and Richmond; adapted for detached and semi-detached villas, of 60l. to 100l. yearly value. Leasehold for ninety-five years. Rent 8s. per foot frontage; average depth, 95 feet.—Address, Mr. BALL, 44, Regent-street, Piccadilly.

TO BE LET on Building Lease, the HALL and PREMISES belonging to the Worshipful Company of Weavers, opposite the entrance to Guildhall, in Basinghall-street, a suitable site for the erection of Offices on a large building. Frontage, about 37 feet; depth 120 feet. The Court will meet at the premises for receiving TENDERS for the same, on TUESDAY, the 4th MARCH next. The premises may be viewed by permission of the tenants, and further particulars may be obtained of JOSEPH JENNINGS, Esq. 3, Foley-place, Cavendish-square; and of Messrs. DAVIDSON and BRADBURY, Solicitors, No. 18, Basinghall-street.

TO BUILDERS and OTHERS. — An excellent SITE TO BE LET or SOLD, for BUILDING PURPOSES, with a good double frontage, situate in a leading thoroughfare, and in an established neighbourhood, well adapted for a pair and dwelling houses, or shops and dwellings. The most rising of the present erections may be used if sound, in erecting any new buildings that may be approved. Money will be advanced if required by the purchaser, or taken to carry out the undertaking, upon a satisfactory arrangement.—Inquire of Messrs. HOWARD and FOREMAN, Soho-square, Hill, Pemberton-row; Mr. EDWARD LOWTHER, 58, Red Lion-street, Clerkenwell; or of Mr. MURRELL, Auctioneer, 1, Wilbraham, Clive.

STRATFORD, ESSEX.—FREEHOLD LAND within three miles of London, exonerated from land tax, and free of tithe, TO BE LET on lease for a long term of years, in large or small plots, suitable for manufactories, building purposes.—Apply to Mr. W. H. DEAN, Auctioneer and Surveyor, Stratford; or to Mr GEORGE POWNALL, Surveyor, 37, Bloomsbury-square, London.

FREEHOLD ESTATE (near the Eastern Counties Railway Terminus, in Shoreditch) TO BE SOLD, consisting of Four Dwelling-houses, Three Shops with dwelling-houses, two cottages, shops adapted for beer licensed premises, stabling, &c. with capital drainage; is part to be let. Also, TO BE LET, a part, or the lease of the whole, of LARGE PREMISES, near the above, consisting of two workshops, about 60 feet long, forge, three stalling and other buildings, with a large yard, also three cottages adjoining.—Apply to Mr TURNBULL, 55, Worship-street, Finsbury.

FREEHOLDS TO BE SOLD, or LET on a Repairing Lease, at a rental; situate on the banks of the River Medway, near the Cross-bridge, Deptford, Kent, consisting of a capital Wharf and Premises, let on lease to the present occupier at 75l. per annum; and Sixteen Dwelling-Houses, which when repaired, would let at weekly rents amounting to 178l. 12s. per annum.—Particulars of Mr. W. S. FRANCIS, Surveyor, 17, Waithman-square, St. George's-fields.

TO PLUMBERS, GLAZIERS, HOUSE-PAINTERS, FURNISHING IRONMONGERS, BUILDERS, or any trade of respectability requiring commodious Shop and Premises.

TO BE LET on LEASE, a capital HOUSE, SHOW-ROOM, WORK-SHOP, STABLE, YARD, and PREMISES, situated well for business, in a large village about 10 miles from London within 12 miles of London; surrounded by all the building activities of a first-class railway station.—Apply to Mr. JOHN DAWSON, Auctioneer and Agent, Marlborough Chambers, 49, Pall-mall.

HAMPTON-COURT.—About Eight Acres of BUILDING GROUND TO BE LET, on ninety-nine years' leases, or LET on small or large plots, at rental equivalent to ground rents, or moderate rents or prices. An advance of say 5l. per cent low in value and the wants of respectable parties taking a desirable frontage. A small portion of the ground would be let for shops and cottages if desired; the residue for detached or semi-detached villas and a few houses of 40l. to 50l. per ann. SOLD (belonging to the same proprietor), a convenient FAMILY RESIDENCE, with six bed-rooms, at a moderate rent.—For plans, &c. apply to Mr. F. LETT, Architect, 36, Essex-street, Strand.

Guildhall, London, 29th February, 1856.

THE COMMITTEE for LETTING the BRIDGE-HOUSE ESTATES will meet at Guildhall on FRIDAY, the 14th day of MARCH next, at ONE o'clock precisely, to LET, for Terms not exceeding Twenty-one or Eighty Years, a Plot of Ground on the west side of Old Change, in the City of London. A plan of the ground and conditions for letting may be seen at the Architect's Office, Guildhall.

FERDINAND BRAND, C. Mptroller.

PUBLIC INSTITUTIONS.—LAND at NORWOOD, SURREY.—Twelve acres FREEHOLD within six miles of the City, FOR SALE. Well adapted for a public institution, a private residence, or Building Society. Land-tax redeemed. Well drained, healthy, peculiarly healthy, with extensive views.—Apply to Mr. PAGET, Estate Agent, 1, Woodcote-place, Chapel-rail, Norwood.

STRATFORD, ESSEX.—FREEHOLD LAND, within three miles of London, exonerated from land-tax and free of tithe, TO BE LET on LEASE, for a long term of years, in large or small plots, suitable for manufactories or building purposes.—Apply to Mr. W. H. DEAN, Auctioneer and Surveyor, Stratford; or to Mr. GEORGE POWNALL, Surveyor, 37, Bloomsbury-square, London.

HARROW.—FREEHOLD LAND.—TO BE SOLD, 10 ACRES, in a ring fence, and several other eligible plots of FREEHOLD LAND, on a moderate price and terms, near the Harrow Railway Station, surrounded by and interspersed by capital villas. Rent-tails are entitled to the privilege of the Harrow Railway Station, and the Great Western Railway Company offer to persons building houses of approved elevation, worth 50l. per year each, a free first-class pass between Harrow and Paddington, for twelve years. There is also abundant supply of excellent water, and very superior brick-earth on the land.—Apply to WILLIAM B. COOPER, Esq. Solicitor, 9, Verulam-buildings, Gray's-inn.

TO BUILDERS.

LEE, near BLACKHEATH.—FRONTAGES TO BE LET, for detached or semi-detached villas, on the Belmont Estate. This estate contains the finest sites for building purposes anywhere round London, and good villas are in great demand, and invariably let. Substantial and well drained, and a certain, healthy. Assistance will be afforded to respectable parties.—For particulars, apply to Messrs. J. and C. W. TODD, Manor-cottage, Lee, near Blackheath; Belmont, Lee, Kent, or Messrs. NELSON and INNES, Whitehall.

ALDERSHOTT CAMP.—PLOTS of LAND To LET on Building Leases, commanding good frontages and admirable sites, facing the principal new erections, and near the Queen's pavilion.—For particulars apply to Mr. THOMAS WHITE, Jun. near the Alliance Hotel, and opposite the permanent barracks, Aldershott Camp.

TO BUILDERS, CONTRACTORS, and OTHERS.—TO BE DISPOSED OF, a BUSINESS, carried on with good success, for seven years, and around Newport Pagnell, Bucks, by the advertiser, who are about to remove to another locality. The work is genuine, and are certain, and the whole trading and fixed premises for large operations. The Premises belong to the advertisers, and can either be purchased or taken at a moderate fixed rental.—Particulars will be forwarded on application to Mr. JOHN A. MARTIN, 7, Cumberland-street, Devonport, Devon.

February 23, 1856.

ARCHITECTS' BENEVOLENT SOCIETY.

PATRONS.

Sir Robert Smirke, R.A. George Stanley Repton, Esq.
PRESIDENT—Sydney Smirke, Esq. A.R.A.
TRUSTEES.

Sir Charles Barry, R.A. | Charles Robert Cockerell, Esq.
Philip Hardwick, Esq. R.A. | R.A.
TREASURER. William Tite, Esq. M.P. F.R.S.

NOTICE.—The ANNUAL MEETING of the above Society will be held at the Rooms of the Royal Institute of British Architects, 16, Lower Grosvenor-street, on WEDNESDAY, the 12th MARCH next. The Chair will be taken at THREE o'clock precisely. Information relative to the Society may be obtained of the Honorary Secretary, or of Mr. GOULD, the Collector, 8, Craven-court, Charing-cross.

JOHN TURNER, Hon. Secretary, 154, Walton-street, Grosvenor-place.

1st March, 1856.

ROYAL INSTITUTE of BRITISH ARCHITECTS.

Incorporated 7th William IV.

16, Grosvenor-street, Grosvenor square, London, Feb. 1856

Her Majesty having been pleased to grant her gracious permission that the ROYAL MEDAL be conferred on such distinguished architect or man of Science, of any country, as may have designed or executed any building of high merit, or produced a work tending to promote or facilitate the knowledge of Architecture, or the various branches of Science connected therewith, the Council of this Institute will proceed in January, 1857, to take into consideration the appropriation of the Royal Medal.

Gentlemen desirous to compete for the SILVER MEDALS of the Institute, and the SOANE MEDALLION, with its travelling fund, to be awarded for Essays, illustrations, and Designs, may obtain the necessary information on application to the Honorary Secretaries, by letter, prepaid, at the above address.

ROYAL ACADEMY of ARTS, Trafalgar-square.—NOTICE to ARTISTS.—All Works of Painting, Sculpture, Architecture, or Engraving, intended for the ensuing EXHIBITION at the ROYAL ACADEMY, must be sent in on MONDAY, the 7th, or TUESDAY, the 8th of APRIL next, after which time no Work can possibly be received, nor can any Works be received which have already been publicly exhibited.

FRAMES.—All Pictures and Drawings must be in gilt frames. Oil Paintings under glass, and Drawings with wide margins are inadmissible. Excessive breadth in frames as well as projecting mouldings may prevent Pictures obtaining the situation they otherwise merit. The other regulations necessary to be observed may be obtained at the Royal Academy.

JOHN PRESCOTT KNIGHT, R.A. Sec.

Every possible care will be taken of Works sent for exhibition, but the Royal Academy will not hold itself accountable in any case of injury or loss, nor can it undertake to pay the carriage of any package.

The prices of Works to be disposed of may be communicated to the Secretary.

SCHOOL of ART and TRAINING SCHOOL, MARLBOROUGH HOUSE, Pall-mall.—The Spring Session will commence on the 3rd of MARCH, and terminate on the 15th of JULY. Hours of study—Morning, Ten to Three. Evening, Seven to Nine, daily, except Saturdays. Fees for Morning and Evening, 4l.; for Evening, 2l. per session. The School for Female Students not in training, is at 37, Gower-street, Bedford-square.—For prospectus's, apply at the Head Master's Office, Marlborough House.

ART UNION of LONDON (by Royal Charter). Prizeholders select for themselves from the Public Exhibitions. Every subscriber of One Guinea, will have besides the chance of a Prize, an impression of a Plate of Harvest in the Highlands, engraved by J. T. Willmore, A.R.A. from the important and well-known Picture by Sir E. Landseer, R.A. and Sir Augustus Callcott, R.A. The Prints are now ready for delivery.

GEORGE GODWIN, } Honorary
LEWIS POCOCK, } Secretaries.

444 West Strand.

BOARD of TRADE DEPARTMENT of SCIENCE and ART — INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.
Head-Master—R. BURCHETT, Esq.

The Courses of instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a correct Art-education, to develope its relation to the requirements of trade and manufacture, and its application to the common uses of life. Special courses are arranged in order to qualify Schoolmasters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects:—Freehand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still-life, &c, the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the Sciences, processes of China and Enamel Painting, Drawing and Engraving on Wood, and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees 4l. per session, or part of the session. For Evening Classes only, 2l. per session.

The Class for Practical Geometry and Perspective, or that for Modelling and Casting, may be attended separately on payment of a fee of 1l. per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. Mian. Fees per session,—Advanced Class, 2l. and 4l.; Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall mall, London.

COMPETITIONS.

TO ARCHITECTS.

MIDDLESEX INDUSTRIAL SCHOOL.

The Committee of Visitors appointed under an Act of the 17th and 18th Vic. cap. clxx. to provide an Industrial School for the Juvenile Offenders of the County of Middlesex, invite Architects and Others, by PUBLIC COMPETITION, to furnish PLANS and ESTIMATES for such building, to be forwarded, sealed up, and addressed to the Chairman of the said Committee, at the Sessions House, Clerkenwell, on or before SATURDAY, the 26th day of APRIL, 1856. Each set of plans is to be marked with a motto or device, and the name of the author is not to appear, but to be put in a separate sealed letter, bearing on the outside a corresponding motto or device. A premium of 150l. will be paid for the plan which shall be considered the best, 100l. for the second, and 50l. for the third. Particulars as to the site, with a printed copy of instructions, and the conditions upon which the premiums are offered, may be had upon application to me, at the Sessions House, any day between the hours of ELEVEN and FIVE o'clock. Dated this 5th March, 1856.

CHARLES WRIGHT, Clerk to the Visitors.

GRANTHAM BURIAL BOARD.—EXTENSION of TIME for PLANS, &c. The period for sending in Plans for Chapels, Lodge, and Entrance Gates, is EXTENDED to SATURDAY, 22nd MARCH. Plans are also requested for PLANTING the GROUND and LAYING OUT the ROADS and WALKS thereon. Only about one-third is consecrated, one-third unconsecrated, to be sent in by the same time, for which, an additional premium of 5l. is offered. The ground is an oblong square of 220 yards by 120 yards. Entrance, west. By order of the Board,

ROBT. HY. JOHNSTON, Clerk.

Grantham, February 20th, 1856.

BOLTON UNION.—NOTICE to ARCHITECTS, &c—PLAN for a NEW WORKHOUSE.—The site of the intended New Workhouse for the Bolton Union not having yet been determined on, the advertisement requiring Plans to be prepared and forwarded, is for the present WITHDRAWN.

JOHN WOODHOUSE, Clerk to the Guardians.

Union Offices, Acresfield, Bolton, 21st Feb. 1856.

CONTRACTS.

TUNSTALL LOCAL BOARD of HEALTH. To BUILDERS.—CONTRACT for ALTERATIONS of TOWN-HALL. The Tunstall Local Board of Health are desirous of receiving TENDERS for the necessary WORKS required in the Alterations and Improvement of the Town-hall. Drawings and specifications may be inspected at the Office of the Local Board, Amicable street, Tunstall, from MONDAY, the 3rd, to SATURDAY, the 8th of MARCH; and further particulars may be obtained, on application to Mr. G. T. ROBINSON, Architect, 23, Upper Parade, Leamington.—Tenders to be delivered to me, sealed and endorsed, on or before TUESDAY, the 11th of MARCH next.—By order,

Tunstall, 20th February, 1856. J. LOWNDES, Clerk.

BURSLEM LOCAL BOARD of HEALTH. CONTRACT for FURNITURE and FITTINGS.—The Burslem Local Board of Health are desirous of receiving TENDERS for the SUPPLY of the necessary FURNITURE and FITTINGS for the New Town-hall. Drawings and specifications may be inspected at the Offices of Mr. G. T. ROBINSON, Architect, 23, Upper Parade, Leamington, from MONDAY, the 3rd, to SATURDAY, the 8th MARCH; and at the Public Offices, Moorland-road, Burslem, from MONDAY, the 10th, to SATURDAY, the 15th MARCH.—Tenders to be delivered to me, sealed and endorsed, on or before TUESDAY, the 18th MARCH next.

By order, J. LOWNDES, Clerk.

Public Offices, Moorland-road, Burslem, 20th Feb. 1856.

CONTRACTS.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London District hereby gives notice, that sealed TENDERS, addressed to the Director-General of Contracts, will be received at the War Department, Pall-mall, on or before the 26th MARCH next, for the REPAIR of FIRE-ENGINES, BUCKETS, and for executing the WORKS and REPAIRS of the Royal Engineer Department in the London District, viz.: LONDON, WINDSOR, CROYDON and CHARLTON, HOUNSLOW and HAMPTON-COURT; for a period of three years from the 1st APRIL, 1856, to the 31st MARCH, 1859. Printed schedules and forms of TENDER may be obtained at the Royal Engineers' Office, 11, James-street, Pimlico, between the hours of TEN and FOUR o'clock from the 1st to the 15th MARCH inclusive. The War Department reserves to itself the right of rejecting the whole or any of the Tenders.

Royal Engineers' Office, London District,
February 27, 1856.

TO CONTRACTORS and OTHERS.—The Committee for BUILDING a CHURCH at BYKER, Newcastle-on-Tyne, are desirous of receiving tenders or offers for the PURCHASE of the STONE on the Site. The superficial extent is one acre, and the depth of good stone considerable, with very little baring. The purchasers will have to work out the stone within a limited period, and to comply with such other conditions as the committee may require. Besides the ordinary modes of conveying away the stone the purchaser may have the facility (made by an arrangement with the proprietors) of a joining private railway, terminating at a convenient wharf, which possesses every convenience for shipping stone on the River Tyne. Mr. GILBERT, or Mr. YOUNG, Schoolmaster, Byker, will show the site, and offers may be addressed to the Rev. T. R. GREEN, St. Mary's place, Newcastle-on-Tyne.—Byker, Feb. 25, 1856.

ST. SAVIOUR'S DISTRICT.—To CONTRACTORS, BUILDERS, and OTHERS.—The Board of Works for St. Saviour's District, are desirous of receiving TENDERS for the performance of the Works in connection with the separate ENTRIES from Houses and Buildings into the MAIN SEWERS, and other Works connected with drainage and sewerage within the District, for the term of one, two, or three years. The Tenders to be based on the schedule of prices printed for the purposes of the Board; a copy of which can be had upon application at the Board room, on Deptford-bridge, or the requisite number will be forwarded by post on receipt of a letter requesting the same to be sent in, or schedule returned. The Contractor will have to enter into a contract according to the printed form attached to such schedule, and he and two sureties to execute a joint and several bond in 500l. each, and for the performance thereof. All persons tendering must fill in the printed forms of tender, with names of sureties annexed to schedule, and must send in their Tenders to the Board sealed up and endorsed "Tender for General Works," on or before TWELVE o'clock at noon on the afternoon of WEDNESDAY, the 12th of MARCH instant. The Board will pay the expense of the contract, that of the bond must be borne by the Contractor. The Board do not bind themselves to accept the lowest or any Tender.—By order of the Board,

HERBERT STURMY, Clerk.

Board-room, Emerson-street, Bankside, March, 1856.

TO MASONS, PAVIORS, BUILDERS, CONTRACTORS, AND OTHERS.

THE VESTRY of the PARISH of ST. GEORGE-IN-THE-EAST hereby give Notice, that they will meet at the Board-room of the Workhouse, Charles-street, Old Gravel-lane, on THURSDAY, the 13th day of MARCH, instant, at SIX o'clock in the afternoon precisely, to receive TENDERS for the supply of MATERIALS and the execution of all PAVING and MEASURED WORKS, required for the repairing and paving the carriage and footway pavement of the several streets and places; and also for the supply of Materials and the execution of the Jobbing and Measured Works required to the sewers and drains within the said parish. Contracts to be for one year from the 25th MARCH, 1856. Tenders must be sent in on the basis of schedules of prices obtainable at the Vestry offices between the hours of TEN and FIVE, on payment of 5s. for each schedule, such sum to be returned on the receipt of a bond fide Tender. Any Tender not upon the printed form of the Vestry will be rejected. The parties whose Tenders may be accepted for Paving will be required to enter into a bond with two responsible sureties in the sum of 200l. and for Sewers and Drains in the sum of 50l., for the due performance of the contracts. The expense of the bond and contract will be borne by the Vestry, and the Vestry do not bind themselves to accept the lowest or any Tender.

By order of the Vestry, W. L. HOWELL, Clerk.

Vestry Office, 40, St. George-street, 3rd March, 1856.

TO BUILDERS.

PERSONS desirous of TENDERING for ADDITIONS and ALTERATIONS to the FARMHOUSE in the occupation of Mr W. PARSONS, and new FARM BUILDINGS, at Elsfield, near Oxford, on the estate of Colonel North, M.P., may see the plans and specifications at Mr. W. PARSONS', Elsfield. The Tenders are to be delivered at the Office of Mr. J. F. CLARK, Architect, Newmarket, on or before SATURDAY, the 22nd day of MARCH; and the lowest or any Tender will not necessarily be accepted.

WATERING.—The VESTRY of the Parish of SAINT LUKE, CHELSEA, will meet on TUESDAY, the 18th day of MARCH, in the Board-room of the Manor House, King's-road, at ELEVEN o'clock in the Forenoon, to receive TENDERS from persons desirous of CONTRACTING to PROVIDE MEN, HORSES, and WATERING CARTS, from the 25th inst. to the 24th day of SEPTEMBER next, both days inclusive. Detailed particulars, and conditions, together with a form of Tender, may be had, on application at my Office. Sealed Tenders, signed by the proposed Contractor, with the names and description of two sufficient sureties for the performance of the Contract, to be left at my Office, on or before MONDAY, the 17th day of MARCH. The legal charges of the Contract to be paid by the Contractor upon the execution of the same; but no Tender will be received or accepted, unless made on one of the printed forms.—By order, CHARLES LAHEE, Vestry Clerk.

Office, Manor House, King's-road, March, 1856.

[For remainder of Contracts see next page.

CONTRACTS.

THE DIRECTORS of the MIDLAND RAILWAY COMPANY are prepared to receive TENDERS for the SUPPLY of about 2,000 Tons of FISHING PLATES, or about 1,500 Tons of FISH-BOLTS, and 1,000 Tons of CHAIRS, to be delivered on the Line of the Company's Works at Derby, on or before SATURDAY, the 6th June next. Tenders and Lists of the SECRETARY of the STORES COMMITTEE must be addressed as to be received not later than TUESDAY, the 11th of MARCH, 1856.

By order, JOSEPH SAUNDERS, Secretary.

Derby, March 1.

METROPOLIS LOCAL MANAGEMENT ACT.—MASONRY AND PAVING WORKS.—The Vestry of the Parish of ST. MARYLEBONE are prepared to receive TENDERS for the following WORKS, viz.:—For PAVING with Yorkshire Paving Stones and Kerb Paving and Channels, for [illegible] and for the Forms of Tender and further particulars may be obtained at the Contractors' Yards, Wells-street, Oxford-street, and at the Vestry Office, Marylebone-lane, where the Tenders are to be delivered and endorsed "Tenders for Masons' and Pavers' Work," and deposited on or before FOUR o'clock in the Afternoon of FRIDAY, the 21st day of MARCH next; and the Vestry reserve to themselves the right to accept or reject any Tender, or any portion thereof. Each Tender will be required to enter into a Bond with sufficient Sureties for the due performance of the Contract, and the Contractors will be required to sign the same before the Contracts will be sealed.

By order, CHARLES LAHEE, Vestry Clerk.

Offices, Manor House, King's-road, Chelsea, March 1856.

VESTRY of ST. MARY NEWINGTON, SURREY.—Contracts for the Supply of Flint, Pitching, Broken, Granite, and Yorkshire Stone, and other Road Pitchings, Gravel, Cartage, Horse-hire, &c., for the ensuing year. Forms of Tender and Specification may be had at the Vestry Office, Walcot-place, Lambeth. The Vestry will meet at the Vestry Hall, Walcot-place, on MONDAY, the 17th day of MARCH next, at Seven o'clock in the evening, to consider such Tenders as may be received, and willing to CONTRACT, for REMOVING ASH-HOLES, and Rubbish, and doing of such Paving, Curbing, Broken Granite, Gravelling, Repairing, and Asphalte Work, in the Parish, as may be required by the Vestry, from the 25th day of MARCH next, for a period of not less than one nor more than five years. CONTRACTORS will be required to perform all the Work of the Parish as the Parish Surveyor shall direct, and to keep the Roads, Streets, and Highways within the before mentioned period.—For further particulars and forms of Tender apply to the said Surveyor. Tenders to be sealed up and addressed to the Vestry Clerk, at the Vestry Hall, Walcot-place, Lambeth, and delivered at the Vestry Hall, Walcot-place, Lambeth, on or before the hour of SEVEN o'clock in the evening on the 17th day of MARCH next, and endorsed "Tenders for Paving Works," and "Tenders for Masons' Works," as the case may be. The Vestry will meet at the Vestry Hall, Walcot-place, Lambeth, on MONDAY, the 24th day of MARCH next, at Seven o'clock in the evening, to consider such Tenders as may be received, and to appoint Contractors for the several Works. The Vestry will require Sureties for the due performance of the Contracts, and will not be bound to accept the lowest or any Tender.

Dated this 1st day of March, 1856.

By order, HENRY CHESTER, Jun., Clerk to the Vestry.

1, Church-row, Newington.

THE STOCKTON GAS-CONSUMERS COMPANY, LIMITED, are prepared to receive TENDERS for MANUFACTURING, CONSTRUCTING, and ERECTING GAS-APPARATUS and BUILDINGS in the Borough of Stockton, in the County of Durham; and for supplying and LAYING, complete, about 15 miles of MAINS of differing forces, with the requisite Valves, Governors, apparatus complete of gauge-meter, station-meter, and [illegible] he mains and pipes, branches, outlets, and [illegible] mains, branches, outlets, and [illegible] son of retorts, with iron roof, shed, the brick arches and setting of retorts, purifier house, and foundations for purifiers, meter house, and [illegible] other purposes, meter house, and [illegible] the whole to be completed on or before the [illegible] next. Plans and specifications may be seen at the Gas-Works, on the premises of the Company, and at the Office of Mr. W. HUDLESTON, 31, Nicholas-street, Stockton, where Tenders may be delivered. The Gas-Works will be required upon the Contract to be taken down, and the land restored to its present state.

Stockton, March 4, 1856.

ELTHAM, KENT.—TENDERS are required for the ERECTION of Public OFFICES at Eltham, Plans and Specifications to be seen at the Office of Mr. THOMAS CHESTER HAWORTH, Solicitor, Eltham, on and after MONDAY, the 10th inst., and Tenders by SIX o'clock on THURSDAY, the 20th inst. The lowest or any Tender is not necessarily to be accepted.

TO GENERAL CONTRACTORS.

NORTH-COATS INCLOSURE, LINCOLNSHIRE.—CONTRACT, No. 1.—Valuable Quarries in the parish of the Inclosure of the Lordship or Manor of North-coates, in the County of Lincoln.—Lots for sale.—Notice is hereby given, that TENDERS for the EXECUTION of the following WORKS, viz. For the FORMATION of about two miles in length of NEW SEA BANK, the EXCAVATION of about [illegible] cubic yards of SEA BANK, the [illegible] of about [illegible] miles in length of NEW SEA SLUICE, [illegible] and stone, with [illegible] and all necessary Piling and Timber Frames and Timber. Plans and specification of the said works have been prepared by Messrs. MACHAN and FOWLER, Architects and Surveyors, [illegible], and may be inspected by Contractors at the Office, [illegible] day of MARCH, 1856, at their Offices, where all necessary information may be obtained.—Tenders for the whole of the works are to be delivered [illegible] TWELVE o'clock at noon, on WEDNESDAY, the 26th day of MARCH, 1856, endorsed "Tender for North Coates Sea Wall and Sluice Works."

CHARLES NORTH, Valuer.

South Moreby, March 5, 1856.

Ample security will be required, and the Valuer will not be required to accept the lowest or any Tender [illegible].

TO SCAVENGERS.

THE VESTRY of the PARISH of ST. LUKE, CHELSEA, will meet at the Board-room, at the Manor House, Kings-road, Chelsea, on Thursday, the 13th day of MARCH next, at Two o'clock precisely, to receive TENDERS for the [illegible] CONTRACT from the 25th day of MARCH next to the 24th day of June, 1857, inclusive, lying at my Office as above, for CLEANING all the Squares, Streets, Lanes, Courts, Mews, Alleys, Public Passages, Ways, Thoroughfares, and Places under the jurisdiction of the said Vestry. The Vestry do not bind themselves to accept the lowest or any Tender. Each Tender must be accompanied by two sufficient Sureties, with the names and description of two sufficient Sureties for the due performance of his Contract, to be [illegible] before or at the Vestry, on MONDAY, the 17th day of MARCH. The usual clauses of the Contract to be [illegible] on the execution of the same; and no Tender will be received or accepted, unless made on the Printed Form to be obtained at my Office.

By order, CHARLES LAHEE, Vestry Clerk.

Offices, Manor House, King's-road, Chelsea, March, 1856.

CONTRACTS.

LILLESHALL CHURCH, SALOP.—Builders are invited to TENDER for the RESTORATION and PARTIAL REBUILDING of the Parish Church of Lilleshall, near the Lilleshall station on the Shropshire Union Railway.—Plans and specifications can be seen, on application to the Rev. H. G. BUNSEN, Vicar, at Lilleshall; or at the Office of the Architect Mr. NORTON, 24, Old Bond-street, London, on and after MONDAY, the 10th inst. Tenders to be sent to Mr NORTON, on or before the 24th inst.

SURVEY of TIPTON PARISH.—The Tipton Local Board of Health are prepared to receive TENDERS for the SURVEY and LEVELS of the Parish, the whole of the work to be done in conformity with the requirements of the Local Board of Health, in London. Conditions may be seen at the Board's Offices, Church-lane, Tipton, on MONDAYS, WEDNESDAYS, and FRIDAYS, between the hours of NINE and ELEVEN a.m. Tenders will be received by the Board, on or before the 20th day of MARCH, 1856. The Board do not bind themselves to accept the lowest or any Tender.

GEO. M. WARING, Clerk.

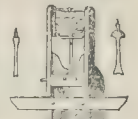
JOHN PARKIN and CO. late BLAKE and PARKIN, NEW MEADOW STEEL WORKS, SHEFFIELD, MANUFACTURERS of CIRCULAR and MILL SAWS IMPROVED CAST-STEEL FILES, for the use of engineers and mechanics, PATENT HARDENED MACHINE KNIVES and CUTTERS, manufactured for planing and moving wood, for cutting paper, iron, stone, leather, &c made to any pattern or immediate with the utmost exactness. Warranted to work with a harder and finer edge than any other mode of temper.

INVENTORS of CORE-ANNEALED CAST STEEL for tans, piston-rods, &c. MANUFACTURERS of RAILWAY SPRINGS, BLISTER, SHEAR, and CAST STEEL, &c.



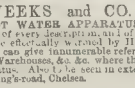
NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, FOWLS, JAMES, and CO. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 28, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

KIMBERLEY'S NEW PATENT MORTISING MACHINE occupies but little room, is most simple and durable, and complete within itself, with seven chisels and three core drivers, and being all iron, is almost impossible of injury or derangement.

Thousands who use it bear witness to it.



A Book sent by post, with full particulars, and a great number of testimonials.

See, also, Kimberley's Patent Flooring Cramps, Scaffolding Brackets, Dog Stretchers, &c. &c.

IRONMONGERY.
PFEIL AND STEDALL.
THE LARGEST STOCK AT
THE LOWEST PRICE,
5 AND 6, BROAD-STREET, BLOOMSBURY.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

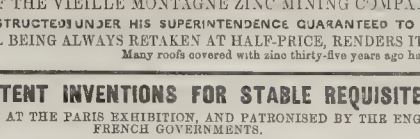
CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.



Many roofs covered with zinc thirty-five years ago have never required repairs.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original Inventors of the PATENT ENAMELLED MANGER, RACK, and WATER TROUGH AS ONE FIXTURE, to which they have made important additions, the main features of the same being explained in the following description and Engraving.

A represents the Patent Halter-staple and Collar rein, the ball of which is taken to the back of the manger-works with freedom and can be up or down the rude-bar, and is noiseless in its operation, as also a sure preventative against the most restive horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, made of galvanized sheet-iron, light and durable

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up, out of the way when not in use.

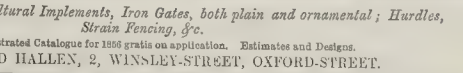
COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized and enamelled

IMPROVED SURFACE-DRAIN, with safety covers, Sinking Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

The New Illustrated Catalogue for 1856 gratis on application. Estimates and Designs.



COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

TYERMAN'S PATENT HOOP-IRON BOND FOR BUILDING PURPOSES.

TARIFF OF PRICES
Beyond the current Price of Hoop-iron.

The undermentioned Gauges are kept in stock; but any Gauge or width, will be supplied within a few days, at a small advance on the following prices:—

Gauge.	In. wide.	Per 1,000 ft.
No. 16	1¼	7s. 0d.
15	1½	7s. 6d.
15	1¾	8s. 0d.
15	2	8s. 6d.
15	2½	9s. 6d.

Plan and Elevation of Bond, showing Position and Form of the Claws.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching at intervals of 11½ inches on both sides alternately, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming reversed claws, which, when so bent, that a direct end grain of the iron is presented longitudinally, offering most powerful and effectual resistance, and which become, when built into the brickwork, embedded in the structure, preventing the possibility of longitudinal escape, and a complete and permanent bonding together of the whole building is thereby obtained.

Patentee—FREDERICK TYERMAN, Architect, 44, Weymouth-street.

Sole Manufacturers—THOMAS PERRY and SONS, Government Contractors, Bilston.

London Depôt—463, OXFORD-STREET.

JUDKIN'S IMPROVED GAS REGULATOR has the following advantages to recommend it to the consideration of all gas consumers:—
1st. It can be easily adjusted to supply gas at any required pressure below that of the street.
2nd. When once adjusted, it will admit of NO VARIATION in LIGHTS BURNING, whether they are few or many, whatever the fluctuation of pressure may be.
3rd. The light being purer by perfect combustion, the atmosphere is more healthy and agreeable.
4th. A saving of at least from 25 to 35 per cent in the consumption of gas is obtained.
ITS ADVANTAGES over other REGULATORS are as follow:—
1st. It is more simple in its construction.
2nd. It is never stopped or mis-operated by having less friction, as it works only on two steel centres, which are immersed in quicksilver.
3rd. It is not liable to get out of repair, and requires less attention than a meter itself.
N.B. A Testing Apparatus has been fitted up on the premises of the Patentee, 30 and 31, Corporation-street, Manchester, and 98, Fleet-street, London, for the purpose of demonstrating the above-named facts.

CONTRACTORS' RAILS.—FIFTY to SEVENTY TONS of CONTRACTORS' RAILS TO BE DISPOSED OF, in good condition.—Apply to MATTHEW T. SHAW, 61, Mansion-street, London, Contractor for Railway Plant, Stores, &c. (Late 13, George-street, Mansion House.)

TO IRONMONGERS, BUILDERS, &c.
PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanised ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 55, High Holborn.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab the beautiful stone now raised from the lowest beds of their quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 24, Surrey-street, Strand.

WHITEHALL WHARF, Parliament-street, Westminster.—Mr. FRANKLIN begs to invite the Sculptors, Marble Masons, Builders, &c. to inspect his extensive STOCK of Italian and Irish forest Marbles, which he is constantly importing in blocks and slabs, consisting of upwards of twenty different varieties, which he is enabled to offer at very reduced rates. Several large blocks of statuary, suitable for sculpture, &c. now landing.

TO SCULPTORS, BUILDERS, MASONS, &c.
B. FABBRICOTTI respectfully invites the Gentlemen connected with the Marble Trade to inspect his fresh STOCK, composed of statuary, vein, Sicilian, black and gold, dove, Bardilla, Sienna and Breccia, in blocks, and particularly call their attention to a large quantity of his best statuary, sixty blocks, of all sizes, just landed.
M. numerous vases and slabs, finely executed in Italy.
Carrara Wharf, Thames-bank, Pimlico.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.
THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a collection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Anne's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, Sea Foam, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, King's-cross, London, continue to supply the trade with all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

STONE, GRANITE, and MARBLE.—
BRAMLEY FALL, CAEN,
DARLEY DALE, FARLEY DOWN,
HARE HILL, HUDDLESTONE,
PORTLAND, and various Stones, in Block and Slab.
Yorkshire Paving, Landings, Steps, Sills, Sinks, Coping, &c.;
Granite Blocks, Squares, Curbs, Pitching, &c.
Valentia Slate Slabs, Grindstones;
Marbles, in Blocks and Slabs,
At FREEMAN'S Stone Wharfs, Millbank-street, Westminster; City-road Basin; and Deptford.

STONE! STONE! STONE!—To the Trade, Builders, and Others.—The Cheapest place in London for Paving, Sinks, Self-faced Slab, Hare-hill Slab, Steps, Landings, Bath Stone, Portland, Granite, Pitching, Curb, and every description of Stone, is at JOHN KNIGHT and SONS, Heron Wharf, Mile-end.—York Paving, 33s. 6d. per 100 feet; Slab for Hearths, &c. 4d. per foot super. Bath Stone, best quality, delivered in any part of London, is 7½d. per foot.—Terms, cash on delivery.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, old Broad-street. Manager—JAS. J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter. For terms apply to Mr C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

ANCASTER STONE, so remarkable for its free working quality, combined with great durability. Price, and cost of transit to any part, may be obtained, upon application at Mr. W. THOMPSON'S Office, Elmer-street, Grantham.

BANGOR WHARF, King's-road-bridge, Camden-town.—ST. NORFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, lime, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

YORKSHIRE STONE.—THOMAS TILNEY, Stone Merchant, Tanfield-place, Leeds, begs to inform Builders, Surveyors, and Local Boards, that he can supply direct from his Quarries, by water or railway, Paving, Landings, Steps, &c. got out to sizes, on the most advantageous terms. Prices sent on application.

YORKSHIRE and PORTLAND STONE.—ROBERT DANIEL, Victoria Wharf, Pimlico, London and Island Wharf, Leeds, begs to inform Contractors, Builders, Masons, and others, that he still continues to supply every description of STONE to any extent at the lowest current prices, comprising Park Spring, Harehill, Potternewton, Robin Hood, Portland, and Caen, in block and slabs of any thickness; Bramley Fall, Yorkshire paving, landings, steps, coping sills, sinks, grindstones, headstones, ledgers, marble slab, granite curb, &c.
Any quantity sent direct by rail to all stations, or by vessel to any port in the kingdom.
A list of prices sent on application.—Address, Victoria Wharf, Pimlico, London.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK-STREET, WESTMINSTER
Marble of all kinds and of best quality, in block and slab, Marble mortars, &c.

DARLEY DALE STONE.—This Stone, introduced by Sir Charles Barry at St. Edward's Grammar School, Birmingham, and well known as having been selected for
ST. GEORGE'S HALL, LIVERPOOL,
and numerous works, including the Railway Station, Birmingham; Borough Bank, Liverpool; Evesham-bridge; Mr. Beaufoy's Schools, Lambeth; and the Portico and Cornice of the Town-hall, Leeds; is kept in considerable quantity at the Darley Dale Stone Wharf, City Basin, London.—Apply to W. and J. FREEMAN, Millbank-street, Westminster; or GEORGE WALL, at the Quarries, near Matlock.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf, as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE.

BATH STONE.—HENRY STONE, QUARRYMASTER, begs to inform Architects, Builders, and others, that he still continues to supply the best COMB DOWN, HAMPTON DOWN, and BOX GROUND WEATHER STONE. Delivered in the trade at Box or Bath station on the most reasonable terms. H. S. begs to call particular attention to his Hampton Down Stone, it being of a very fine texture and rich colour, adapted for the internal decorations of mansions. Ashlar and Sawn Range Stone cut to order. Cargoes shipped in Bristol, and delivered to any part round the coast. Residence, WIDCOMBE, Bath.

YORKSHIRE STONE.
GEO. VINT and BROTHERS, IDLE, near LEEDS,
Beg to inform Architects, Surveyors, Contractors, Builders, and Masons, that their can supply to any extent all kinds of YORK STONE, including Paving, Bramley Fall, Park Spring, Robin Hood, Harehill, &c. of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS,
QUARRYMEN AND STONE-MERCHANTS,
BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCALES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

FOR MACADAMIZING ROADS.—The HARDEST and most DURABLE STONE.—The Proprietor of an extensive Quarry at Dunpennock Rock, containing Blue Elvin Granite, is open to contract for to supply any quantity of the above Stone, its durability having been tested, and proved to be 35 per cent. harder than Guernsey Granite.—For further particulars apply by letter to Mr. JOHN NEWTON, Norway-wharf, Hertford-road, Kingsland-basin.—Two Coal Waggons for Sale.

SLATE CISTERNS, SINKS, and every description of SLAB-WORK, in Slate, Roofing Slates, or Covering.—T. B. HANNAFORD is not only in a position to execute orders to any amount in the above, at extremely low prices, but guarantees a first-class material in all respects, similar to the slate he has used in fitting up and covering the principal mercantile and Governmental buildings in the City. A priced list sent on application.—TREVALGA WHARF, Ratcliff-cross.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Knee Stand at Brighton, Fortescue's Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1843. This beautiful material, handsomer and more durable than marble, is now fixing its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is unreasonably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of loo-tables, chiffoniers, consoles, &c.; baths, baptistries, altar-tablets, pilasters, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 20 and 20, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations.
FROM 2s. 9d. PER SQUARE YARD.
Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.
Apply to JOHN PILKINGTON, Pelonceau and Limmer Asphalte Office, Monumental-place, Pimlico, 14, Fish-street-hill, London.
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

O. McCARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.
W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No. 21 Wharf, Harrow-road, to 9, North Wharf-road, Paddington, have now on sale Coal Garden and Screened Gravel. For terms, &c. apply at the Wharf.
Contractors supplied to any extent.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to M. H. BLANCHARD, late of Coade's Original Works, and successor to them in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, in the adornment of our noblest buildings, and is the only tried material that is capable to stand the ravages of time unimpaired. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition. A large Stock of newly-designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

BLASHFIELD'S PATENT TERRA-COTTA, Manufactured at Mill-wall, Isle of Dogs.—Capitals Consoles, Tracery for Parapets, Balusters, String Courses, Friezes, Bas-reliefs, Vases, Statues, Chimney-shafts, and all other Architectural Ornaments modelled, finished, and burnt, in the best manner, and warranted to stand heat and frost, either in Buff or Red Colour. Prices extremely low. A great variety and large stock may be seen at BLASHFIELD'S Warehouse and Show-rooms, No. 1, Praed-street, Paddington.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface. It is not affected by sea-water, or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments without the least fear of any inconvenience to the inmates.
The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.
The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 63, King William-street City; and by the Manufacturing and Painting Agent, Mr FREDK. BRABY, Fitzroy Works, Newroad. In Manchester and Liverpool, by Mr. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Mr. ANDERSON and CO. In Timberbranch, and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.
The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint to contract.
For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

ROYAL POLYTECHNIC.—Astronomy, illustrated by a magnificent Dissolving Orrery and Diagrams, with appropriate Music from Haydn and Handel. Lecturers on the above, by J. H. Pepper, esq. every Wednesday and Friday, mornings, at two; evenings, at eight. N.B. The Lecture and Diagrams of Friday are entirely different from those of Wednesday. H for sketching.	BB ditto ditto.
H B hard and black for drawing.	BBB ditto ditto.
	BBBB ditto ditto.
M medium.	

Sold by all the principal Stationers in town or country.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest numerous. Designs and estimates furnished for ornamental windows, painted for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 10, 18, OXFORD-STREET.

CRYSTAL SHEET GLASS, first, second, and third quality, in cases about 200 feet each, suitable for pictures and superior glazing, from 3½. to 6d. per foot; Belgian sheet glass, in cases 200 feet each, 3rds, 38s; 4ths, 30s; squares, in boxes, 100 feet each, 6 by 4 to 10 by 8, 1½d.; larger sizes, up to 32 by 14, 2d.; ground-glass, in cases, 2½d. per foot; Crown and Sheet, British, Patent, and Hartley's Patent Rolled Rough Plate, English and Foreign Fluted, Stained Glass, Glass Slates, &c.; Sheet Lead, Pipe, White Lead, Oils, Colours, &c.

G. FARMILOE and SON, 118, St. John-street, West Smithfield.

FOREIGN and English Sheet, Crown, Plate, Patent Plate, Patent Rolled, and Cast Glass of all sorts. Sheet lead, Pipe, White-lead, Lead, Iron and Brass Pumps, Water-closet Cocks and Plumbers' Brasswork. Paints, Colours, Oil, and Turpentines of the finest quality, at wholesale prices. Lists on application at THOS. MILLINGTON'S Warehouse, 87, Bishopsgate-street, London. Established more than 100 years.

By her Majesty's — Royal Letters Patent.

THE ROYAL PATENT DECORATIVE GLASS COMPANY, 21, Castle-street, Southwark-bridge-road. NOTICE of REMOVAL.—REMOVED to No. 13a, CUMBERLAND-MARKET, REGENT'S-PARK, where machinery has been erected to carry on the manufacture of this most important branch of ornamental glass.

Orders can now be executed, with the greatest cheapness and despatch, by EDWARD BAILLIE and CO. 13a, Cumberland-market, and 118, Wardour-street, Soho (successors to M. Toussaint, Cartisser, and Co.)—Specimens of every description of Church Memorial Windows and Decorations, Glass Painting, Staining, and Embossing, may be seen as above. Designs and estimates upon application.—February 20, 1856.

By Royal — Letters Patent.

THE COSMOPOLITAN GLASS COMPANY, 296, Oxford-street.

REDUCED TARIFF.

CCC CROWN, 18 Tables, per crate, 30s.; H 15 oz. SHEET, 9d. per foot; FOREIGN SHEET, 260 feet cases, 34s. per case; CROWN or SHEET SQUARES, 100 feet boxes, 3d. per foot; HARTLEY'S PATENT ROUGH PLATE, from 6d. and PERFORATED VENTILATING GLASS, 1s. 6d. per foot; CRYSTAL SHEET GLASS, 4d., 6d. and 8d. per foot; FLASHED RUBY, 1s. GROUND SHEET, 3½d. ENAMELLED, 8d. per foot. Sashes primed and glazed, 3d. per foot.

Catalogues free, on application to the Managers, as above.

PLATE-GLASS.—Builders can be supplied with PLATE-GLASS of any size AT VERY REDUCED PRICES, upon application to the SOHO PLATE-GLASS COMPANY, 26, Soho-square.

JAMES PHILLIPS and CO. beg to call the attention of Builders and the Trade to their present LOW PRICES of GLASS for cash.—C C C per crate of 18 tables, 29s.; 16 oz. sheet glass, 9d. per foot; crown and sheet squares, in 100 feet boxes, from 14 to 20/24, 3d. per foot; enamelled glass, in crates, 6d. per foot; ground, ditto, 3½d. per foot; fore-in sheet, in cases of 200 feet, 26s. 28s. 40s. and 48s.; ½ patent rough plate tiles, 10s. per doz. Cathedral and stained glass, and all the neutral tints.—116, BISHOPSGATE-STREET WITHOUT.

GLASS BENDING.—To BUILDERS, COACHBUILDERS, COACH-LAMP MAKERS, &c.—GEO. CROSSFIELD, son of the late John Crossfield, of Bury-street, Bloomsbury, respectfully informs the above trades that the glass-bending business is carried on at 83, THEOBALD'S-ROAD, Red Lion-square, London, where all orders will be executed with punctuality, at the lowest possible prices.

J. FISHER, 70, YORK-ROAD, LAMBETH, formerly shop foreman to Messrs. Lawrence. Shop-front Builder and Manufacturing Joiner. 1¼ and 1½ four-panel doors from 6s. each; 1½ sashes and frames from 7d. per foot; 2 inch ditto from 8d. Windows fitted with Gribbon's Patent Hinges for cleaning, painting, &c. All kinds of joiners' work estimated for according to design.—A List of Prices sent on application.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.—Workshops, 110, Broadwall.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SIMS'S PATENT WIND-GUARD.—This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Iron mongers and Builders; and of the Patentee at his office, 65, Fenchurch-street, London.

By Her Majesty's — Royal Letters Patent.

DUPREE and CO.'S DEFIANCE WIND GUARD and VENTILATORS, &c. for the perfect cure of Down draft Smoky Chimneys, suitable for Public and Private Buildings requiring a constant change of air.

Also

SHIP VENTILATORS, requiring no attention, imparting about six times the quantity of fresh air than any other in use.

Also

VENTILATING ROOFLIGHTS, for Slate or Tile Roofing, without Paint or Putty.

Prospectuses sent on application.

London Depôt—ESNOUF and MANGER, 141, Minories, City.

COMPLETE COURSE of NATURAL PHILOSOPHY.

I.
LARDNER'S HANDBOOK of MECHANICS. 337 Illustrations. One Vol. 5s. cloth.

II.
LARDNER'S HANDBOOK of HYDROSTATICS, PNEUMATICS, and HEAT. 292 Illustrations. One Vol. 5s. cloth.

III.
LARDNER'S HANDBOOK of OPTICS. 200 Illustrations. One Vol. 5s. cloth.

IV.
LARDNER'S HANDBOOK of ELECTRICITY, MAGNETISM, and ACOUSTICS. One Vol. 5s. cloth. In April, 1856.

The above Four Volumes will form a complete Course of Natural Philosophy.

London: WALTON and MABERLY, 28, Upper Gower-street, and 27, Ivy-lane, Paternoster-row.

MR. FERGUSSON ON THE NEW AND THE OLD SYSTEM OF FORTIFICATION.
This day, with Plans and Woodcuts, 8vo. 3s. 6d.

PORTSMOUTH PROTECTED:

A Sequel to "The Peril of Portsmouth." With Notes on Sebastopol and other Sieges during the present War.
By JAMES FERGUSSON, Esq. Author of "The Illustrated Handbook of Architecture," &c.
JOHN MURRAY, ALBEMARLE-STREET.

CLEGG ON COAL GAS.
Now ready, in demy 8vo. with numerous Engravings on 14 Wood Cuts, price 12s 6d. bound in cloth, the Second Edition, revised and much enlarged,

A PRACTICAL TREATISE ON THE MANUFACTURE AND DISTRIBUTION OF COAL GAS.

Its Introduction and Progress re Development. Illustrated by Engravings from Working Drawings, with General Estimates.
By SAMUEL CLEGG, Jun. M.I.C.E. F.G.S.
LONDON: J. H. WEALE, 59, HIGH HOLBORN.

Third Edition.
THE BUILDER'S FRIEND,
Price One Shilling.
Office of "The Builder," and of all Booksellers.

BATHS AND HOT WATER APPARATUS.
J. TYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK & Table Leader application. Estimates and plans for fixing given.
J. TYLOR and SONS, Manufacturers,
WARWICK LANE, NEWGATE-STREET, LONDON

Nearly ready, in 2 vols.
A HANDBOOK of ARCHITECTURE for the UNLEARNED; in a Series of Letters to a Lady, embodying a Popular Sketch of the History of Architecture, and the Characteristics of the various Styles which have prevailed.
By GEORGE GODWIN, F.R.S. &c.
With Illustrations.

By the same Author, price 1s.
LONDON SHADOWS; or, a Glance at the Homes of the Thousands. With Illustrations.
Office of "The Builder," 1, York-street, Covent Garden; and from any Bookseller.

THE FREEMASONS' MAGAZINE and MASONIC MIRROR for March, 1856, is now ready. Price 1s.
London: HENRY GEO WARREN, 2, Red-lion court, Fleet-street; and GEORGE ROUTLEDGE and CO. Farringdon-street.

1 Vol Handsomely Bound, 21s.
BUILDINGS and MONUMENTS, Modern and Mediæval, being Illustrations of the Edifices of the Nineteenth Century, and of some of the Architectural Works of the Middle Ages.
By GEORGE GOLWIN, F.R.S.
Fellow of the Royal Institute of Architects & Editor of "The Builder," and Correspondent of Several Societies.
With numerous Engravings.
Published at the Office of "The Builder," 1, York-street, Covent-garden.

MOSELEY'S ENGINEERING AND MECHANICS.
New Edition, corrected to the present time, with Additions, price 24s
THE MECHANICAL PRINCIPLES of ENGINEERING and ARCHITECTURE.
By the Rev. HENRY MOSELEY, M.A. F.R.S.
By the same Author, the Fourth Edition, fcp. 6s.
ILLUSTRATIONS of PRACTICAL MECHANICS.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

DR. ALFRED TAYLOR AND DR. OWEN REES.
New Edition, in 2 vols. 8vo. with numerous Woodcuts, price 42s. cloth; or separately, Vol. I. 28s.; Vol. II. Part I. 21s.; Part II. 25s.
PEREIRA'S ELEMENTS of MATERIA MEDICA and THERAPEUTICS. New Edition.
Edited by ALFRED S. TAYLOR, M.D. & F.R.S. and G. OWEN REES, M.D. &c.
*** In this work will be found a full account of all the Medicines that are now in common use, and their Effects.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

New Edition, in 4to. with 24 Plates and 349 Woodcuts, 27s.
A TREATISE on the STEAM-ENGINE, in its Application to Mines, Mills, Steam Navigation, and Railways. By the ARTISAN CLUB.
Edited by JOHN BOURNE, C.E.
Author of "A Treatise on the Screw Propeller," price 38s.; and of a "Catechism of the Steam-Engine,"—of which a thoroughly revised Edition is nearly ready.
"The great merit of the present work is the vast quantity of information which it affords as to details of construction. In this respect it seems unrivalled. It contains a vast store of invaluable facts."—*Civil Engineer and Architect's Journal.*
London: LONGMAN, BROWN, GREEN, and LONGMANS.

In royal 8vo. with Plates at 1s. 6d. each, price 15s cloth,
USEFUL INFORMATION for ENGINEERS: being a Series of Lectures delivered to the Working Engineers of Yorkshire and Lancashire. With a series of Experiments shewing the Results of Experimental Inquiries into the Strength of Materials, the Causes of Boiler Explosions, &c.
By WILLIAM FAIRBAIRN, F.R.S. F.G.S.
"Mr. Fairbairn's name is a guarantee for the soundness of this work. It treats of steam, fuel, and boilers,—the working classes, as they will one day be called,—with an appendix on wrought iron, which will be called the workman's pocket-stuff. Though a professional book, it is as much adapted for the general reader as such, and as can be."—*Athenæum.*
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Price 1s. in crown 8vo with Ten Plates, &c. of Plans and Sections,
MUSEUMS, LIBRARIES, and PICTURE-GALLERIES, Public and Private, their establishment, formation, arrangement, and architectural construction. To which is appended, Remarks on Scientific and Mechanics Institutions.
By J. W. and W. PAPWORTH, Architects.
CHAPMAN and HALL, 193, Piccadilly.

Forwarded free, for value in postage stamps.
ANCIENT GOTHIC CHURCHES.
Part I. 7s. 6d. contains the Geometrical Secrets of the true Freemasons in constructing the Round Church here of England; Malmesbury Abbey, Kings College, Cambridge; Henry VII.'s Chapel; St. Mary's Church, Oxford &c. Part II. 8s. demonstrates Preston Church, Kent; Tong Church, Salop; Gordon Church, Surrey; Salisbury, Lincoln Litchfield, Worcester, Wells, Hereford, and Norwich Cathedrals &c. Part III. 8s. sets forth Sefton Church, Liverpool; St. Alban's Abbey, Westminster Abbey, Dorset Church, Exeter, and Ely Cathedrals; Heckington Church, Lincolnshire; St. Michael's Church, Coventry, &c. The three parts bound in cloth gilt lettered, 24s.
ARCHITECTURAL BOTANY. Part I. 2s. 6d.
By W. P. GRIFFITH, F.S.A. F.R.I.B.A. &c.
Published by Lockwood & Co. Stationers'-hall-court, London.

Part VIII now ready, price 6s. 6d.; also Division 2, containing Parts VI. VII. and VIII. price 15s.
EXAMPLES of BUILDING CONSTRUCTION; being a Series of Working Drawings, to a large scale, with Descriptions, selected from Executed Buildings.
By THOMAS LEVERTON, Civil Engineer and Architect's Assistant; Clayton's Radcliffe Prize Essayist, &c.
Part VIII. contains four large Plates, viz. a Section of Wynyard, Philip Wyatt, architect; the Warehouse, Strutton Ground, Westminster; Skylight, Albert-gate, by Thomas Cubitt; Roofs and Partitions, by Thomas Cubitt, architect.
To be had of the Author, 13, York-street, Strand.

Now published, the May Number of
THE IRISH REPORTER

The Builder.

VOL. XIV.—No. 683.

WE gave last week some particulars of the arrangements made by the London Necropolis Company for funerals at their Cemetery at Woking, and took the opportunity to offer some remarks on the state of the burial question. After speaking of the station in the Westminster-bridge-road, we took the reader to one of the stations in the cemetery itself. We will now pursue our notice and comments.

The estate of the Necropolis Company considerably exceeds in size what is at present laid out, or is thought likely to be ever required for burial purposes. The quantities purchased amounted to over 2,100 acres, the estate reaching, though in straggling pieces, to a length of four miles along the railway, which runs through it. It may be viewed as divided, in the other direction, into two principal portions,—one at the Woking Station of the main line, and the other about two miles farther westward, towards Farnborough and Pirbright. The cost of the ground was about 25*l.* an acre; the land of the old suburban cemeteries being said to have averaged 480*l.* an acre. The eastward portion contains about 400 acres, wholly surrounding the Woking Station; the Staines, Woking, and Wokingham Railway, now in course of construction, also passing through it. Of the westward portion (1,700 acres), 1,000 acres south of the main line, were at first reserved for cemetery purposes, but this quantity must have been increased by the purchase lately of a few small holdings, which were scattered about the general ground. Of the 1,000 acres or more, 400 acres are at present laid out, and prepared for use. The land about the Woking Station, and a portion of that westward (north of the line, and in great part also north of the Basingstoke Canal), called the Hermitage, the committee have just obtained power to let for building upon. It is presumed that the park-like appearance, which may ultimately be got in the cemetery, will render the neighbourhood attractive, whilst the improved practice of interments to which the company are bound by the terms of their Act, would render the usual noxious results imperceptible. The portion of the estate now appropriated for interments, though not deficient in pleasing prospects, and though undulating and varied in many parts, is chiefly heathy moorland, which it will take some few years of "top-dressing" and cultivation, to make as beautiful as—with what has been done, or is doing, in the way of planting—it will no doubt eventually become. The compensating advantage, however, is the perfect suitableness of the soil, for interments. The soil consists of a dry sand; and it is so compact, that graves can be dug to almost any depth, of perfect shape, and without shoring.

The average mortality of London is set down by the company as 60,000; and it is stated to be the opinion of Dr. Sutherland, that the quantity of ground reserved at Woking would, with the proper interval between interments, suffice for the whole metropolis for five or six centuries to come. Looking at published calculations, Mr. Chadwick, on the scale proposed by Riecke, and taking the deaths of the metropolis about the year 1838 as averaging 50,000, found that 444 acres, or a space a little more than a fourth over the area of the Regent's-park, would suffice in perpetuity for the amount of mortality. The 600 acres or more, of reserve at Woking, therefore afford a considerable margin for increase of population, and perhaps even for some interments which are calculated upon from Southampton, Portsmouth, and other towns.

The total area of the London suburban cemeteries is stated to be 282 acres; a quantity which will obviously become inadequate shortly after the practice of "pit-burial," maintained in them, is put a stop to. The graves at Woking, in ordinary cases, are dug to a depth of 6 feet, in "grave spaces" measuring 9 feet by 4 feet. A greater depth, however, is provided when called for: though, of course, according to the opinions which now obtain, great depth is not desirable,—the access of the air, and consequent speedy decomposition, being retarded by it.

The consecrated and the unconsecrated ground are separated from each other by the Pirbright road,—each being enclosed by park fencing. We may here mention that a recent discussion in the House of Lords, with reference to the difficulty made about consecrating the Carlisle ground, in consequence of the absence of what was deemed a proper fence, would show the necessity of proceeding cautiously in future cases.

The stations of the two divisions of the Woking ground are precisely similar to each other,—consisting of temporary buildings round three sides of a quadrangle, of one story in height, and painted in drab and white stripes. A portion of the roof projects a few feet, on iron cantilevers, and is ornamented along the edge. In the permanent buildings better means of shelter would be desirable. The decorative part of the design in the present case, has no distinctive character, and too much resembles an ordinary railway station. The chapels, also similar to each other, take the form of small cross churches with towers and slated spires, and are built of half-timbered brickwork, "rough-cast" externally. The interiors, with stained woodwork and white interspaces, are successful, though plain; but the cross form, which required us to sit almost facing some of the mourners, seems to be open to objections in this class of buildings.* The service at the pauper funerals, which are what we are able to speak to, was impressively conducted. It is, as usual in such cases, and necessarily so, read over several bodies at one time. In this case, two coffins rested on the same bier. No other difference is made between the funerals of different classes. The bier is a light carriage, drawn by horse or by hand, as may be required. It seemed to us of greater height than would be desirable; and the pall was short, and did not hang well. If the latter were cut more to the shape of the mediæval palls, and with heavily-weighted fringe, it would be better, considering how much it is exposed to the wind, on the ground.

Time will be indispensable to develope the sylvan beauty which may characterise the place, and which appears to have been prepared for by planting. Vegetation is not merely desirable for the obvious reasons in cemeteries; but it is, as we need not now say, the best disinfectant and absorbent of the putrescence of the ground. Except in the Abney-park Cemetery, however, little attention is paid to it in London, compared with what is desirable. Far too little space is left for walks, or kept free from graves; and thus, the effect which the monuments might otherwise produce does not result. It would, be worthy of the consideration of the Necropolis Company, how far with advantage, more attention might be given to the matter of monuments than they would seem to be giving, were we to judge only by the few headstones that there are. Half-a-dozen of these are reproduced from old designs, but are clumsily detailed; and the general number have no character whatever, except what may be derived from the segmentally-cut top. For the company to set that forth as "statuary" is clearly what people call "a mockery, a delusion, and a snare." It were much to be desired that an architect were more frequently engaged on subjects of this sort. At most cemeteries, we see ideas, originally good, twisted to hopeless caricature by the mason who has pitched his tent hard by the gates: the sarcophagus, the urn, and the broken column have been "done to death;" and in one cemetery at least, there is a broken *cross*,—the climax of absurdity.

The demeanour of the mourners on the day of our visit was all that could be desired. Indeed, it has occurred that mourners of the pauper class, and some of a much higher grade, respectively have presented appearances and manners which would have justified exchange of places. Still we are compelled to think that cases are not unfrequent, when the solemnity of the occasion is not duly regarded. We make no attempt to understand the peculiar custom of the Irish, or to discover what may have been the exact nature of practices spoken of as obtaining even amongst the early Christians. We can regard it only as a foul stain upon the character of a large section of the people, that a funeral is made an occasion for some sort of excess in dram-drinking. Perchance, the evil may have orginated in the idea that spirituous liquor was required by the bearers of the corpse,—who are not always free from danger. That, however, would not describe or explain the whole case, as it is presented to us from circumstances which come to our knowledge. Indulgence in drink clings to the English character, as its bane and degradation,—we fear, in *fact*, as much it undoubtedly does in the eyes of foreigners. At the funerals by the Necropolis Company, we are told that not unusually, mourners have carried drink with them, of which, on the return journey, they had partaken to such an extent, that they have been found dancing about the carriage, by the ticket-collector. On one morning, at the Westminster-road station, two "mourners" arrived so *drunk*, that the superintendent could not allow them to proceed by the train. We admit that these incidents may be exceptional, and we repeat, that on the day of our visit, though it was the principal day for pauper funerals, not an unseemly act or gesture was to be observed; but even as exceptions, the facts we speak of, and are assured of, are grievous and melancholy, and call for the utmost attention from all who concern themselves with the welfare of the working classes. Feeling thus strongly, we were indeed sorry to see "a pint of rum" and other liquors set down in the list at the refreshment-room at Woking. Restrictions may be hard upon those who do not require them: but some men are infants where drink is concerned, and must be protected against themselves, till (if ever) they arrive at years of discretion: and in this case, we fear, some must suffer, if need be, for the faults of others. We hope that the principle of the arrangements to secure privacy, is so fully observed, that such incidents as we refer to could hardly be witnessed by mourners of other parties, whether belonging to the first or the intermediate classes.—Several persons, of some position in society, have already provided themselves with graves at the cemetery; and there seems to us every argument why others should prefer the same locality,—especially, as it is fairly shown, since the old suburban cemeteries are likely to be closed at no very distant time. Amongst all

* It is due to Mr. S. Smirke, their architect, to say that both the chapels and the stations were *required* by the directors to be erected in as *temporary* and *inexpensive* a manner as could be devised; and that he literally fulfilled their wish is evident from the smallness of the expense incurred for these. Their intention is, we believe, to build something more suitable and handsome, as well as to greatly increase the amount of accommodation, whenever the concern may be productive enough to justify their so doing.

classes, it is found that there is a growing disposition to dispense with much of the useless expenditure on funerals. The company itself will act as undertakers, and certainly are practically carrying out what had been long felt, that funerals could be conducted at half, or a third of the usual rates. Their charge for a first-class funeral, with grave in perpetuity in the consecrated ground, and head and foot stone; with the service, and conveyance for four mourners, is 21*l.* 14s. 2d. They put forth the charges as considerably below what were contemplated by the Board of Health. If they carry out the object of reduction in expenditure on funerals, they may effect as much good in that way as in a sanitary point of view, and perhaps more than that. A good idea has been lately entertained,—that of forming burial insurance clubs; the interments to take place at Woking. But, so many objectionable results have followed on the establishment of similar societies,—sometimes from the entire want of all calculations—sometimes from defalcation by the treasurer, and sometimes in a manner far worse—that difficulty has, we believe, been felt in working the idea. Mr. P. H. Holland, one of the medical inspectors to the Home Office, however, suggests that the difficulty might be got over by the company, were they to stipulate on not making any *money* payment, but that they should perform the funeral merely,—also that there should be no liability from the company in any case where a death occurred within six months, or some similar period, after the commencement of a subscription.

From a report which has just been issued, we learn a few useful particulars of cost. Land, compensation and interest, cost 59,648*l.* 17s. 10d.; and the recent purchases, under the Act of 1855, cost, in addition, 2,452*l.* 2s. 4d. The Woking Branch Line, cost 1,419*l.* 17s. 6d.

The cost of the cemetery itself, so far as laid out, is comprised under the following heads:—

Woking Station ...	£10,627	16	8
Planting and road-making	3,048	14	10
Draining...	8,802	19	10
Fencing	2,958	14	8
Whence it would appear that the cost of the whole works was	£25,438	6	0

The cost of the London station is set down as 23,293*l.* 19s. 8d. Besides these items, however, expenses were incurred for professional advice and superintendence; and the geological survey, by Mr. Prestwich, is set down at 52*l.* 10s. Capt. Moorsom; Sir Wm. Cubitt; Mr. Abraham; Mr. Sydney Smirke, on the Woking buildings; and Mr. Tite, on the London station, were at different times employed. Besides the refreshment-rooms and churches at Woking, there are stables and cottages, and a house for the clergyman, all which, we are told, are included in the items above.

The idea of providing a joint cemetery for several parishes, has been several times mooted. It was long since suggested in our own pages; and the disadvantage of arrangements left in the hands of numerous small parochial boards, was clearly shown by Mr. Chadwick. Both the extramural system, and the union of parishes, formed part of the proposal by Sir Christopher Wren—when he prepared that plan for the rebuilding of the City, which, if carried out, would have preserved London from evils felt to the present hour. The same great architect preceded us in the recommendation that the "dimensions" of monuments "should be regulated by an architect, and not left to the fancy of every mason;" and also thought of a form of hearse, with "two wheels and one horse," which appears to resemble what is used by the Necropolis Company. Extramural sepulture was, however, the ancient custom; and the words of one of the twelve tables, "*Hominem mortuum in urbe ne sepelito neve urito*," are well known. It cannot be too generally understood, that neither deep burial, nor the use of leaden coffins, will do more than retard the ultimate decomposition,—which cannot go on without poisonous exhalation; but which, proper choice of site and soil, and proper manner of burial; and provision for vegetation may reduce to the minimum of result. Lead coffins not only do not—as we think—from the first (and the experiments of Dr. Waller Lewis not forgotten), secure the advantages which appear to be expected under the present Home Office regulations; but the speedy decay of the outer casing, and consequent sinking and breaking of the lead, are events which are too familiar in the practice of architects, to need our producing them as evidence. It is, perhaps, the idea that injurious exhalations can never be wholly prevented, that has led sometimes to the proposal to revive the practice of cremation. Not long since some notice of a society, formed with such an object, appeared in the *Builder*; and a letter from a correspondent, signing himself "W. B." has been some time before us, in which the question is argued with considerable ability. We doubt, however, the possibility of a change—where the sensibilities of relatives, and feelings which it is desirable to foster, and which are not mere prejudices, are so deeply concerned. We believe that the Woking Cemetery, that of the City of London, and perhaps that which is proposed on the Great Northern Railway—with some further attention to the subject by the Government—may be made the means of completing the change from the various sanitary and moral evils which have been connected with the burial of the dead.

All must hope that when that mortal frame which now concentrates all the power of mechanics, the subtilty of chemistry, and the wonder and beauty of nature and art, shall resolve itself into new forms,—parted from the mysterious agency of *life*,—the indestructible elements from their grave, may convey no poison to the living. Surely, if a man strives to *live* not wholly in vain, he should provide against the injury which his body may occasion to his survivors,—so that, like the physician of Paris, "*vir pius, et probus*," he might be made to say on his tombstone, that he had wished to be buried under the free air,—

> "Ne mortuus cuiquam noceret,
> Qui vivus omnibus profuerat."

or, like one buried at Louvain, that,—

> "Partem sui materiælem
> Hic in cœmeterio condi voluit,
> Ne templum dehonestaret,
> Aut nocivis habitibus inficeret."

Those who have the like sense of duty, may find some quiet resting-place in the dry sand of a Woking grave.

THE TREATMENT OF MODERN STAINED GLASS.

THERE are some passages in the paper by Mr. Winston on Stained Glass* which ought not, I think, to be allowed to go unquestioned. I think so, because, owing to Mr. Winston's very laborious and valuable inquiries into the history and manufacture of stained glass, his opinions on other points,—*ex. gr.* on matters of taste,—may possibly be received with more deference than they are entitled to. It is no new thing to find a zealous antiquary unable to grasp the true principles which govern all art: it is, indeed, so common, that it would be a real matter of surprise were Mr. Winston to afford an exception to the rule. I take it that the application of all the faculties to one department of antiquities has a natural tendency to blunt the power of regarding each art as forming a portion only of the whole effect which it is the business of the perfect artist to strive after. It makes men rather regard the elaboration of one detail than the perfect harmony of all the parts, and tends therefore to an unsatisfactory result. This is especially true of stained glass, which, so far as it forms an enrichment of architecture, ought to be treated specially in reference to its fitness for its purpose, and in regard to the general effect of the buildings in which it is introduced, as well as with regard to its own perfection as a work of art. This is what, beyond all doubt, the best of the old artists did with great success. I think, therefore, that I, and others who agree with me, are not the "foolish zealots" Mr. Winston seems to think us, when we see in this, as well as in the nature of the material, some restriction in the style of design applicable to modern works in glass.

About four years since I advocated what I still believe to be true views on this subject in the "Ecclesiologist," and since then, in a note to the second volume of the "Stones of Venice," Mr. Ruskin has given the result of his consideration of the subject. The views we have advocated will find, I am afraid, no favour with Mr. Winston; but I shall ask you, nevertheless, to allow me to quote Mr. Ruskin's words, as containing the best possible corrective to the views which Mr. Winston has propounded. He writes as follows: "Next in the case of windows, the points we have to insist upon are, the transparency of the glass, and its susceptibility of the most brilliant colours, and therefore the attempt to turn painted windows into pretty pictures is one of the most gross and ridiculous barbarisms of this pre-eminently barbarous century. It originated, I suppose, with the Germans, who seem for the present distinguished among European nations by the loss of the sense of colour; but it appears of late to have considerable chance of establishing itself in England: and it is a two-edged error, striking in two directions; first, at the healthy appreciation of painting, and then at the healthy appreciation of glass. Colour, ground with oil, and laid on a solid opaque ground, furnishes to the human hand the most exquisite means of expression which the human sight and invention can find or require. By its two opposite qualities, each naturally and easily attainable, of transparency in shadow and opacity in light, it complies with the conditions of nature; and by its perfect governableness it permits the utmost possible fulness and subtlety in the harmonies of colour, as well as the utmost perfection in the drawing. Glass, considered as a material for a picture, is exactly as bad as oil paint is good. It sets out by reversing the conditions of nature, by making the lights transparent and the shadows opaque; and the ungovernableness of its colour (changing in the furnace), and its violence (being always in a high key, because produced by actual light), render it so disadvantageous in every way, that the result of working in it for pictorial effect would infallibly be the destruction of all the appreciation of the noble qualities of pictorial colour. In the second place, this modern barbarism destroys the true appreciation of the qualities of glass. It denies, and endeavours as far as possible to conceal, the transparency, which is not only its great virtue in a merely utilitarian point of view, but its great spiritual character," and "the true perfection of a painted window is to be serene, intense, brilliant, like flaming jewellery; full of easily legible and quaint subjects, and exquisitely subtle, yet simple, in its harmonies. In a word, this perfection has been consummated in the designs, never to be surpassed, if ever again to be approached by human art, of the French windows of the twelfth and thirteenth centuries."

I have never seen these arguments met; and, as I am sure that they require no support of mine to commend them to the sympathy of your readers, I shall leave them to produce their proper effect.

Mr. Winston's main dogma, that receding backgrounds, and therefore "pretty pictures," are admissible in glass, being sufficiently controverted, I must beg you to allow me to go on to refute his other proposition, that, because he and many persons "are unable to perceive the ill effect of a subject cut through by a mullion," therefore there is no objection to it. Just consider for an instant what this would involve us in. First he would have us work up

* See pp. 71, 97, *ante*.

our glass into imitations of pictures, and then, disregarding the solid obstruction presented by the mullions, carry these "pretty pictures" all across our windows. Pray, if Mr. Winston had to introduce a painted tryptich into a church, may I ask whether he would beg Hunt or Dyce to paint it, and then cut up their painting with lines of tracery carved in oak? Would they be satisfied that "the eye passes across the mullion without being sensible of any interruption of the design?" or would they not rather beseech their employer to let them paint between the mullions of his next tryptich, and not behind them also? And wherein lies the difference? For if, as Mr. Winston wishes, we are to treat our glass as we do our pictures, then why not treat our windows as we do our picture-frames, carefully taking out the mullions and tracery, to leave room for the desired development.

The truth is, that there is ample variety afforded us in the old style of glass painting, if we choose to work it out properly. I grant it is more difficult, and requires more training to attain success than it does in the "pretty picture" line; but this I do not think a disadvantage. And the reason which actuates "our mediævalists" in desiring to revive this early style rather than the work of the sixteenth century, is their conviction that it was carried out with far more regard to true principles, and with far more success; just as in the same days architecture was also so much nobler than afterwards.

What is now required seems to be, that we should consider whether Mr. Winston's dicta on a matter of taste, are to be followed implicitly or not; and though, as I have said, I am always ready to give him my most hearty acknowledgments for what he has done in some respects, I cannot feel that I am bound to do this. He seems to me, if I may say so without offence (and I am specially anxious not to introduce any acrimonious matter into this discussion), to be warped and prejudiced to some extent by a consciousness of his considerable knowledge of the *history* of the art, and to forget that this knowledge is not enough without some of that feeling for general effect upon which artists are bound to depend for success in their work.

There is one other statement which I notice with some regret, because I can hardly suppose it to be the result of more than a moment's reflection. Mr. Winston's belief in the invariable partial success of a modern classic school is singular. Wherein consists it? In false construction, flat roofs, paint, whitewash, or cracked window-heads? Nor less singular is his assertion of the invariable absolute absence of any good in the work of the Mediæval school. If they have done no more, they deserve surely some encouragement for their revival of true principles in ornamentation and construction, for their earnest fighting against the sham architecture of the last few years, for their constant assertion of the paramount necessity of truthfulness in all that we design, and for their appreciation of the advantages of colour on our walls and our floors, as well as in our windows.

It comes, after all, to be a question of individual taste; and then I say that, if we are to trust in men, I, and I suppose most men, would a thousandfold rather follow Mr. Ruskin than Mr. Winston; and that, at any rate, before we give up the attempt to rival the glories of the noblest school of artists on glass the world has yet seen, we must have some visible proofs, of the strongest kind, of the success of Mr. Winston's efforts in the path he has chalked out for himself.

I fear he will give me the credit for being a too determined mediævalist; but I am so on no light grounds, and not without much consideration.

GEORGE EDWARD STREET.

I would have requested your leave to notice Mr. Winston's late lecture at the Architectural Exhibition, as reported in your paper of the 9th ult. but for the words, "to be continued," showing it was not complete. The *Builder* of Saturday supplies the conclusion, which, however, differs so little from the first part, that I almost regret having waited for its appearance. Mr. Winston's argument has a wormy property which does not suffer from being divided, but has as much appearance of head and tail, dissevered as entire, and seems to suffer as little. The lecture, indeed, is very little more than a jumble of misstatements and "passages that lead to nothing." The title, "Application of Painted Glass to Architecture," is a mere delusion, for no rule of application is given, nor is any relative utility or benefit pointed out; and when we have accompanied the lecturer in and out, up and down, over and over, through all his convolutions, we find ourselves at last exactly at our original standing-point, and everything as it was before.

Mr. Winston sets out by noticing the differences of opinion which prevail on the subject of glass-painting, yet believes all are agreed as to the badness of modern windows. He retains niches in his Temple of Fame for less (how many less we cannot say) than half a dozen glass-painters; but, alas! does not leave this dubious half-dozen so much as one production apiece to justify their fame; for in spite of the manifest superiority of foreign glass-painting, as proved in the Hyde-park Exhibition, in spite of "the enormous sums expended on painted windows within the last twenty years," Mr. Winston believes that we can scarcely boast of *one* window, and questions really if more than *two* could be named, which could bear comparison with the modern windows of Munich or Cologne, inferior as Mr. Winston thinks these are, and little to be followed. But let us admit the low standard of acquirement usually to be found among "practitioners" of this art: let us leave the odd collocation of mediævalists, glaziers, and architects' clerks, to settle their own accounts with Mr. Winston; and what are we to get from this argument? On what grounds are we called upon to accept this gentleman as our self-elected teacher, or to submit to the sweeping and somewhat spiteful censure, which is not balanced by a morsel of instruction upon the other side? Is the west window of Norwich Cathedral (one of the most expensive works on which "enormous sums have been expended") one of the only two specimens of English glass-painting, which may be compared with the defective glass of Munich and Cologne? And is the window in the ante-chapel of the Temple the *one par excellence?* Either it must be so, or Mr. Winston is in no position to judge others, being himself included in his own verdict of condemnation. The Norwich west window, so far as my judgment goes, is a coarse and ambitious failure. I examined it by evening sunshine and morning quiet, and could come to no other conclusion; and that this opinion was widely shared, will be in the memory of many: so much so, indeed, that its removal was hinted at within a year of its erection, even among those active in getting it up. For the specimen in the Temple, I can only say, that turning from a careful inspection of it to the windows in the east end of the same church, I felt that the person most benefited by its erection was our veteran Willement, whose windows looked by its side as much in advance of it, as they did to my eyes of most modern glass at the time they were put up. I am sorry to differ from "the judgment of those best qualified to form an opinion," yet these are my impressions. Is it upon these two windows that Mr. Winston stakes the reputation of the art?

The history of painted and coloured glass which follows may be very well as a proof of the erudition which nobody impugned, otherwise it will not much enlighten any reader; and we are scarcely clear of the *stiff* patterns, mosaics, and colours (and surely this word means more to the lecturer than it does to ordinary mortals), when we fall upon a startling proposition which would speedily bring ease to Mr. Winston's troubled spirit, and set at rest our smaller tribulations, were it made into fact and reality. "In the application of painted glass to architecture," says Mr. Winston, "much of the difficulty with which the subject is beset would vanish if all the buildings intended to be so decorated were of one character." How true! how wise! But, unfortunately, there are such a myriad of ifs, which could change this fighting-world into a paradise. If all men were of one mind, for example, there would be no controversies about painted windows, so Mr. Winston has to come down from this simple revelation to the under platform of the "*as it is*," which compels us to *select* glass paintings "fit for buildings possessing every variety of character." And here is again brought forward the oft-repeated accusation, that the lovers and promoters of Gothic architecture demand, as a *sine quâ non*, at least as much ill-drawing in painted glass as prevailed at the birth and growth of its various styles —an accusation both hurtful and untrue—denied over and over again by those accused who were best able to make the denial. Reiteration of an old charge is, however, a safe mode of argument, and a fashionable, not disdained by greater critics than Mr. Winston.

The second part of this lecture, as given in the *Builder*, begins with much laudation of the glass manufactured by Messrs. Powell and Sons. It may be as well to dismiss this, by simply stating the fact, that the successes achieved by Mr. Winston's scientific friends, in the revived manufacture, have received, at various times, and in various quarters, their full meed of honour; and in the present very considerable demand for their glass, I trust the manufacturers are receiving their fair meed of profit; but it must also be said that there are colours and qualities of glass necessary to the glass-painter, which Messrs. Powell cannot, or at least do not, make. * * * *

Now, Mr. Winston professes to give us an account of the progress of glass-painting, from the twelfth to the sixteenth century, which must be satisfactory, being managed after this manner. "We need not trouble ourselves with any intermediate types, but confine our attention to the remains of painted glass belonging to the twelfth, thirteenth, and sixteenth centuries," — that is, passing disdainfully over the fourteenth century, the manhood and strength of the art, of which more anon. This is a pleasant way enough of dealing with difficulties, but it is by no means an instructive one. The Temple Church, Mr. Winston's own experiment, and the Greek excellence which he recommends, come in between these three favoured centuries, and the fourteenth, to which we reach at last. Mr. Winston admits the powerful colour of the time, but questions its propriety as confusing the mullions and tracery, though the all but universal use of the border and clear margin during this period ought to relieve him from his concern on this point; while his objection to canopies, from their want of positive projection, will be shared by few who truly appreciate glass painting, as the art it really was, and is, or should be. As for the sea-green white pattern windows, they are a delusion. I have numbers of specimens of decorated glass, and none of the whites are sea-green: some of them are as white and satiny as the glass of the end of the fifteenth century. Occasionally they appear green from excessive thickness, but such a thing is by no means a distinctive characteristic of the period.

Again, Mr. Winston says—"The Gothic architecture of the fifteenth and sixteenth centuries is so much alike, that it is not surprising to find the sixteenth century glass paintings that have happened to be placed in buildings of the fifteenth century agree so completely with the architecture. Indeed, the glass-painting of both periods are alike in principle; the development of this principle in the sixteenth century constituting the chief difference between them." How strange is this manner of stating a clear and evident natural process. Why not have said that the principles of the fifteenth century continued to prevail for a short time after the commencement of the sixteenth, till it was submerged by the paint and barbarism of the new method? As for claiming on behalf of the Cinque Cento the beautiful pearly lustre of perpendicular glass, the works themselves, even the S. Gudule's windows, on which Mr. Winston hangs his shield, would sullenly disown it.

In discussing the works of the sixteenth century, it is observable that Mr. Winston expands a little on his former prelections. Formerly, if I am not deceived, he professed to hold by the first *quarter* of the century; now it is the first *half*: doubtless St. Gudule's compels the extension.

We come at last to a part which I confess I had waited for with some little expectation, viz. the suggestions for "glass-paintings most likely to harmonize with buildings in the Classic styles." The first portion of this is dismissed as swiftly as pleasantly:—

"With regard to Palladian buildings, we have the Cinque Cento style, ready-made to our hands, the various designs of which, more or less rich in colour, light or deep in tint, flat or receding in their design, would supply ample hints for meeting any exigency of local position or character of the surrounding architecture."

Glass-painters of the nineteenth century! behold yourselves here fully equipped for an assault on all Palladian churches or palaces. It is wonderful what a stroke of the pen can do. When he carries us forward to Greek, the lecturer, to our great disappointment, declines offering an opinion. At most, with an "If I *must*," he gives us a something nothing. And so, with a few remarks settling nothing, upon receding pictures and pictures intersected with mullions, the lecture is finished. We have all been brought to the bar—judged, condemned, and made an end of. If we submit to so summary an overthrowal, we should have, at least, a reward for our humility: and we again ask, what have we gained?

FRAS. W. OLIPHANT.

WAGES OF MASONS AND PLASTERERS. — The *Forres Gazette* states that the masons of Elgin have intimated to their employers that they must have their wages raised to 21s. a week; and the plasterers have made a demand for 20s. if employed in town, and 21s. if sent to the country. Both classes of workmen have at present only 18s. per week.

CLASSIC AND MEDIÆVAL.

It is not my intention to embark in a long correspondence upon the relative merits of classic and mediæval architecture, as applicable to churches, although it might not be difficult to add other reasons to those so well advanced by my friend, Mr. G. G. Scott, in favour of the latter style, at least for ecclesiastical purposes. I would, however, ask all intelligent people to judge by practical results, and not be led away by ingenious and plausible arguments, many of them tending rather to puzzle and confuse than elucidate the subject.

It is certainly amusing to hear the cool way in which many now hold forth upon the duty of adopting a style suited to the requirements of the day, instead of employing known systems of architecture, who never in their own practice have shown the least attempt at progress.

For the want, then, of any other style at present which may satisfy the cravings of theorists, we must fall back upon classic or mediæval architecture; and I ask those not blinded by prejudice, and capable of common observation, whether any comparison can be instituted between the modern churches of classic design, and those built in the mediæval styles? Whether there is not a tone and character imported through the latter style, which it is impossible to obtain by the means of classic composition? I feel satisfied that all true artists, whatever may be their predilections, will admit this: indeed, few persons deny it; and hence, by almost universal consent, mediæval architecture has been so much employed for church purposes. But then exceptions are taken to the forms and arrangement of Gothic churches, as being unsuitable for our Reformed Anglican Ritual, and reference is made to those erected by Sir Christopher Wren, as types of excellence.

Now, no one can be a greater admirer of Wren's works than I am, for they exhibit great genius, and his aim in the designs of his churches seems to be a desire to assimilate classic forms to mediæval composition. The limited spaces allowed to him for the City churches would not admit of chancel arrangements; but in his towers and spires there is the most evident aim at mediæval treatment. It is impossible to doubt Wren's appreciation of Gothic architecture.

If the essential requirements for a church are simply that everybody shall hear, see, and be seen, there must be an abandonment of all internal composition, and we need only copy Fra. Giovanni's great hall at Padua, or other large assembly-rooms, to obtain all that is required.

I contend that the subdivision of our churches by pillars and arches is not objectionable, and that such structural arrangements assist the voice, and prevent the reverberation and blending of sound, incident to vast, unbroken spaces. As to some people not seeing the preacher, this ought not to be a matter of any moment, provided they can hear properly.

In regard to galleries, I could hardly have supposed that anybody in these days would have seriously recognised such erections as fit to be perpetuated in a church; and I cannot but regret that so well-informed and able a man as Mr. Petit should have given the sanction of his name to the use of these deformities by even suggesting "that the Italian style is perhaps better adapted for a church than Gothic, where it is necessary to enclose a wide area under a single roof, or to have two tiers of windows on account of galleries," &c. But as that gentleman admits that his views have changed since the publication of his first work on "Church Architecture," it is to be hoped that his opinion upon this point may lately have undergone some modification.

Mr. Scott has so completely refuted the charge of servile copyism, that I shall not say a word on that head.

It is a somewhat singular coincidence, that at the very time when we are warned against the applicability of mediæval architecture for Protestant churches, the Nonconformists suddenly find its entire fitness for their chapels; and many of their edifices lately erected possess the exact features of churches with arcades, clerestories, aisles, transepts, towers, and spires; and yet these buildings are avowedly auditoriums, and built expressly to secure the desiderata in which our Gothic churches are said by some to be deficient; so that it is difficult to believe the columnar arrangement internally can present any serious impediment to sight or sound. I agree with Mr. Scott in regretting, that when Gothic architecture is beginning to be rightly understood, both in principle and detail, we are to hear its study and practice spoken of in disparagement.

I believe that if the practice of mediæval architecture be persevered in, gradual modifications will follow, and new forms by degrees be evolved. Hitherto attention has been almost exclusively given to English and French Gothic, but the more recent study of Venetian and Lombardic Gothic will at least teach us the true value of colour, and induce us to avail ourselves more freely of local products by using coloured marble and stone, which the facilities of railway communication may place within our reach, even if it does not guide us to new structural combinations.

I would only again say, let any unbiassed person inspect the churches erected in the Classic styles within the last few years, and those built recently in the Gothic style, and I have no doubt of his opinion as to the most suitable architecture for churches. This, after all, is the true test. Nobody will deny that fitness constitutes great excellence in architecture; but those who impugn Gothic as inapplicable to modern wants are singularly inconsistent in praising many Classic buildings recently erected; for though I admit their superiority over buildings of the Georgian era, it surely cannot be a correct expression of design to make large warerooms and storehouses assume the character of Florentine palaces; and yet this seems to be the aim in present street architecture: a hint may well be taken from Mr. Scott's remarks upon this point.

It appears to me that, instead of launching out in derogation of the study of mediæval art, much more good would be effected by urging upon all students the necessity of making themselves masters of the true principles and details of any style in which they may be called upon to practice, rather than by exciting their prejudices against systems which have produced some of the finest buildings in the world.

Benj. Ferrey.

LONDON AND MIDDLESEX AHCHÆOLOGICAL SOCIETY.

At the meeting of this society on the 26th ult. already mentioned, the chairman, Mr. Alexander Beresford Hope, introduced the business of the evening with some very appropriate remarks on the labours of early topographers and London antiquaries.

The Rev. T. Hugo then read the first paper, the subject of which was the Primeval History of London and Middlesex. The state of the metropolis and the adjacent county of Middlesex were, prior to, and at the time of, the Roman invasion, very little known; and although the subject was confessedly obscure, it was not the less interesting, and he hoped to be able to throw a little more light upon it. It appeared that the southern coasts from Kent to Cornwall were those most generally resorted to by foreign traders; and Herodotus spoke of Britain as a place from whence tin was obtained, and the inhabitants were represented as being in a wild state, but to be simple in their manners, not addicting themselves to any luxuries, and being free from vices. The country was stated to be fertile. Strabo also gave a similar description of the inhabitants of Britain, and said that they had large herds of cattle and had plenty of milk, but were unable, notwithstanding, to make cheese. The paper referred to the invasion of Julius Cæsar, but expressed an opinion that, although it appeared very probable that the Roman legions had been encamped near the metropolis, London as a city was at this time utterly unknown; and if it existed at all, it must have been a very insignificant place. Cassivelaunus, who was then king, made a most desperate resistance to the attacks of the various Roman generals who succeeded Cæsar, and when he was impelled to do so, he retreated with his armies to a wood, where he entrenched himself, and, from the appearances that presented themselves on Wimbledon-common, the writer of the paper expressed an opinion that this was very probably the spot to which he retreated. At length the island was, after a desperate struggle, made tributary to the Roman power; but Boadicea, the Queen of the British tribes, revolted, and resolved to resist the invaders. Suetonius, a Roman general, was sent to repress the rebellion, and it was at this period that the name of London was first mentioned, and there could be no doubt that it was a place of some importance.

Mr. Henry Mogford read some notes on the "Later History of London and Westminster." The two most important buildings in connection with this subject, he said, were Westminster Hall and Westminster Abbey, and he gave some interesting details in connection with the ancient and interesting buildings. The last of these, it must be a source of gratification to all to know, was still perfect, but it was much to be regretted that various alterations had been made in the beautiful hall, without even an opportunity being afforded of taking a copy, and of thus handing it down to posterity in its original shape. Reference was made to various interesting relics that had been removed during the building of the new Houses of Parliament, and in particular to two large circular pillars, bearing the arms of the Earl of Stafford, and of the date of 1444, which had formerly stood at the entrance of the old Houses of Parliament, and which were a beautiful specimen of ancient architecture; and the paper expressed a hope that Sir C. Barry would have them replaced in some portion of the new building, as from their recent removal they were no doubt in existence. A proposition had, it appeared, been made to raise the ancient roof of the hall, and thus entirely destroy the original building; but Mr. Mogford said he hoped that all the lovers of mediæval architecture would combine to resist the commission of such an act, and he said he believed that, under the present arrangement in which these buildings were placed, such a proceeding would not be sanctioned.

The Rev. Charles Boutell contributed a paper on "The Royal and other Early Monuments of Westminster Abbey." Mr. Boutell said he considered it would ill become the London and Middlesex Archæological Society to hold their first meeting within the city of Westminster without some special notice being taken of these most interesting and most precious relics. He would accordingly invite to them the thoughtful attention of the society, and with that view would briefly enumerate and describe the more remarkable of these national memorials. After having given such a general description of the Westminster monuments, Mr. Boutell adverted to the suggestions which had been made for the *restoration* of those examples which have suffered the most from the effects of time and of wanton injury: he pointed out the difference between *restoration*, as the term is now understood, and *preservation*; and, while he earnestly deprecated such treatment as could only *restore* these memorials by reconstructing them, he with no less earnestness urged the necessity for the adoption of measures which would save them from actually crumbling away. The architect of the abbey, Mr. G. G. Scott, had already in contemplation a plan of strictly conservative preservation for the royal and early monuments. Mr. Boutell trusted that Mr. Scott would be encouraged to carry out this plan with full effect, and he concluded with suggesting the importance of having drawings and copies of all monumental works and inscriptions in London and Middlesex taken without delay, and carefully preserved as one of the distinctive features in the practical working of the society.

Mr. G. G. Scott read the next paper, the subject of which was "The Chapter-house at Westminster." He said it was well known that this building was the receptacle for the most valuable and ancient records and documents connected with the history of the country, but he regretted to say that it was in a most dilapidated and deplorable condition. The Chapter-house, as they were aware, was the old ruinous half-mouldering building near Poet's Corner, and any one who saw it now would hardly think it possible that it contained any object of interest. In point of fact, however, it was a building of most extraordinary beauty. It was erected in the reign of Henry III. about the year 1250, and at the same period as the Abbey, and it was spoken of at that time as the "incomparable Chapter-house of Westminster," and was used as a chapter-house by the monks of the Abbey. The building was then used for the purposes of the House of Commons, until the time of Edward VI. when that monarch gave up to them St. Stephen's Chapel, and from this time it was used as a receptacle for the records of the kingdom, until 1714, when it was "repaired," as it was called. The Surveyor-General of that time refused to sanction the repairs, and they were placed in other hands, and the result was, that the splendid building was entirely destroyed. The roof was taken off: the vaulting was all destroyed: the beautiful original windows were all blocked up, and round-headed ones placed in their room: the original entrance was blocked up and a miserable door placed in its stead, and the place was

in fact mutilated in every possible manner. It was a work of extreme difficulty, therefore, to be enabled to get at the original building, and it was only after great exertions and labour that he had been enabled to make drawings. Among the discoveries that were made were, one of a whole-length figure, apparently of the Virgin; and also a picture of a female saint, crowned, and having in her hand a gridiron, and at her feet a monk kneeling. Upon one of the doors there were found portions of skins nailed, and, according to an old manuscript that was found in the Chapter-house, these skins were stated to be those of Danes. They had been submitted to the examination of an eminent member of the College of Surgeons, and he had pronounced an opinion that they were undoubtedly those of human beings. In another part of the building he found a long passage which appeared to spring under his feet; and, upon attentive examination, it was found that the floor was nothing but a mass of parchment, consisting of writs, seals, and records which had been wedged down into a solid mass. The whole of these had, it appeared, been removed to the library and were now in proper custody.

Mr. Sydney Smirke afterwards introduced to the company a number of ancient relics, which, he said, were mostly collected by himself or under his own eyes. From Westminster Hall he exhibited the leather sheath of a knife, stamped with fleur-de-lis and with lions passant, and found in a crevice of the masonry of the old walls, together with a quantity of bones, &c. remnants of the royal feasts held in the hall, and which had probably, together with the sheath, been dragged into the holes and crevices by rats and mice. From the Temple Church he exhibited a piece of the sackcloth which enveloped the body of one of the Crusaders, which, he said, resembled some cloth found enclosing two bodies met with when excavating the Chapel Royal, St. James's. Also some iron and wooden wedges used by the masons in levelling the stones of the main pillars of the Round Church. The thickness of the wedges proved the coarseness of the joints of that masonry—a peculiarity often observable in Norman work. Mr. Smirke also exhibited specimens of carved work from this church, from Westminster Hall, and St. Stephen's Chapel, making various remarks thereon, and suggesting that it should be one of the earliest duties of this new local society to endeavour to obtain a safe, permanent, and honourable resting-place for the "old materials" of the extinct monuments of London. He further exhibited a specimen of some fibrous composition used for ornamental ceilings at Wolsey's House at Ipswich, and at Hampton Court, remarking that plaster was not common for decorative purposes early in the sixteenth century in Italy, and still less so in England, of which further proof existed in the leaden ornaments used in the ceiling of the Chapel Royal, St. James's, which he conceived to be a specimen of Holbein's architecture. He further exhibited a plug or dowel of lead used in the vaulting of York Cathedral, and a wrought-iron cramp from the stall of the Chapter-house there, which cramp had, by exfoliation, ruined the masonry. Mr. Smirke, in conclusion, urged antiquaries generally, but especially his professional brethren, not to allow the consideration of the larger features of architecture to cause them to overlook these minor contrivances of our forefathers, which, if not always fraught with instruction, would never fail to be found interesting.

"AQUA PURA."

In the Notices to Correspondents, in the number for Feb. 9th, appears a request, under the above *nom de plume*, "to know how best and most economically to arrange for the filtering of rain-water while in the cistern, * * so as to be able at option to draw off the water, either filtered or unfiltered.

Leaving it to "A. P." to judge as to the eligibility for his purpose of the following expedient, which I have contrived, as regards its economy and otherwise, I beg to place it at his service, and that of the readers of the *Builder* generally:—

Holding, as I do, rain-water in high estimation, and the opinion that, if properly managed, the rain-fall on the roofs of a country house will come little short of the supply wanted for a family,—I am in the habit of providing a cistern capable of containing at least say 100 cubic feet of water, or (100 × 6·25) 625 gallons. In one corner of it I part off, with a movable partition set on the splay, a portion measuring, say 2 feet each way from the corner: this triangular space is the pure water division of the cistern, and the partition is the filter, and is constructed thus:—Form, of a durable wood, three frames of equal size, viz.—that of the intended partition, and of stuff about $1\frac{1}{4} \times \frac{5}{8}$ inch, so that the three are barely 2 inches thick; and to two of these affix closely-perforated zinc, of a stout gauge. Lay one frame flat, with the zinc uppermost, and upon it, two or three plies of blanket stuff: on the latter, lay the open frame, and the inside of that fill up, solid and flush, with coarsely-ground charcoal: then lay on two or three plies of the blanket, and finish with the remaining frame, turned with the zinc downwards: adjust the edges of the frame exactly, and screw the whole firmly together all round.

Supposing the cistern to be a lead-lined wooden one; before lining, affix stout groove-pieces, so as, when finished, to receive the partition freely: for this purpose, those on the sides have to be splayed at back to an angle of 45 deg. in order that the groove in them and the bottom piece may be in one plane. The outer angles of the groove-pieces may be chamfered or rounded: their height should a little exceed that of the overflow. Now line the cistern, carefully dressing the lead into and about the grooves, and lead into the main body of it all the influx pipes; but, from the pure-water division, all the services: slide the filtering partition into its grooves, and caulk carefully round the edges with tow, which is readily removed with a hooked instrument when the partition is to be withdrawn.

Such a filter is very easily cleansed: after brushing well the mud from the outer side, it will generally suffice to subject it to a good *douching* at the pump; but if that be thought insufficient, it will not be found very troublesome to undo, for the ablution of its separate parts. Where its cost has been hesitated at, I have had the cistern prepared for its reception, and itself left for subsequent consideration.

James Wylson.

PROVINCIAL NEWS.

Wisbech.—At a recent meeting of the Local Board of Health, the surveyor reported that he estimated the cost of executing the sewerage works at 6,767*l.* and the annual expense of repairs at 169*l.*; and that it would be best to contract for the execution of the works, and the keeping in repair for twelve months. He also reported as to the waterworks, which were estimated at 17,170*l.* including 1,000*l.* the estimated purchase of land and compensation: these works were also recommended to be put out to contract. It was resolved that the consent of the General Board of Health to the loan of 17,170*l.* be requested.

Dartford.—A transept of glass has just been erected in connection with the Bull Hotel, Dartford. The farmers and others attending Dartford had long suffered for the want of a convenient covered place. The increased accommodation has been obtained by roofing over with glass the inn yard, no longer thronged with coach and post horses, &c. This new market-place was lately opened. The building may also be used for public meetings, concerts, &c. the want of accommodation for which has been long felt in Dartford.

Cowes.—At a meeting of the Local Burial Board last week, Mr. G. Wheeler's tender for the building of two chapels, lodge, and dead-house, with the whole of the front walls and palisading of the new cemetery, was accepted for the sum of 1,150*l.* The following tenders were also given in:—

W. Wheeler	£1,665	0	0
J. Chinchin	1,630	0	0
E. Sherry, London	1,575	0	0
C. Sibbick	1,573	0	0
Grove, Brothers	1,285	10	0
T. Wheeler, Winchester	1,230	0	0

The Board wished the contract to be completed in six months, but the contractor wanted time.

Birmingham.—The foundation-stone of the Edgbaston new vestry hall, which is about to be erected in New Bridge-street, was to be laid on Monday last. The hall, for which plans have been prepared by Mr. Fiddian, will be the only public meeting-place in Edgbaston.

Stoke.—A requisition has been in course of signature to the Chief Bailiff of Stoke-upon-Trent, desiring him to call a public meeting, to express the public appreciation of the offer of Mr. Herbert Minton, to give 500*l.* towards the erection of baths and washhouses, and to consider the best means for securing the early realization of the project.

Evesham.—The new bridge is about to be opened for traffic, as the contractor wants the temporary wooden bridge elsewhere. The approaches, however, will not be completed for some time.

Gloucester.—The laying of the pipes for an additional supply of water from the brook at Witcomb has been completed. Mr. Bateman, of Manchester, the engineer of the Board of Health, has inspected the works. One of the fire-plugs at the Cross was opened, and it was found that the pressure of water was sufficient to throw a stream over the Tolsey.

Liverpool.—The undermentioned contracts for sewering have been accepted by the Local Board of Health:—Netherfield-road North, Mount-street, South-street, St. George's-street, McGregor-street and passages, Owens and Roberts, 623*l.* 7s. 1d.; Portland-place, Portland-square, Portland-buildings and passage, Owens and Roberts, 35*l.* 11s. 9d.; Anderson-street, Aughton-street, and passages, William Tomkinson, 163*l.* 9s.; Anne-street, Salisbury-street, and William-terrace, George Ravenscroft, 87*l.* 10s; Westbourne-street and Alma-street, Richard Smith, 461*l.* 7s.; Lord-street, Raglan-street, Spekeland-street, and a street north of it in West Derby, Isaac Dickson and Co. 271*l.* 10s.; Park-street, Mersey View-street, Vaughan-street, Tamworth-street, Napier-street, and passages, in Toxteth-park, Richard Smith, 708*l.* 14s. 6d.; Wood-street, Penrith-street, Melbourne-street, Carlton-street and passages, Isaac Dixon and Co. 215*l.* 15s.; Llewellyn-street and passages, Richard Smith, 5,241*l.* 6s.

Cheadle.—The *Gardeners' Chronicle* gives an account of some improvements at Abney Hall, near Stockport, the seat of Mr. James Watts, who has built here a mansion and formed gardens. The latter were designed and laid out in the first instance by Mr. Skirving, of Liverpool, but were afterwards greatly altered by Mr. Bigland, of Manchester. The conservatory forms, as it were, part of the south side of the mansion, and is so arranged that a view of the plants is obtained from a picture-gallery which adjoins it on the north side, and also from many parts of the ground-floor. When lighted up at nights it is thrown open to the drawing-room. It is, however, unfortunately ill adapted for plants, owing to want of proper ventilation. The south fronts, which rise one above the other after the manner of the Crystal Palace, are altogether some 20 feet in height, and are glazed with large squares of plate glass: the roofs are ridge and furrow, and are glazed with large panes of sheet glass.

Bradford.—Designs for the interior decoration of St. George's Hall here have been prepared by Mr. J. W. Ingram, the decorator of the Birmingham Townhall, and are under the consideration of the directors of the Hall Company. The ceiling in this design is divided into four compartments, each having its centre flower, gilded, upon a carmine centre, toned down into the neutral tint, from which radiates a circle divided into eight compartments, forming panels, with a gilded ground, on which are emblasoned arms, trophies, and arabesques composed of fruit, flowers, and ornament. The details of the ceiling will be in colours and gold. The cove or segment of a circle, which rises in a span from the cornice to the flat of the ceiling, is divided into a series of panels by a broad band of plaster modelling, consisting of flowers and fruit, tied together by ribbons. These are gilded with different tinted golds, upon a pale purple ground. The panels are a series of arabesques, trophies of flowers and fruit, and musical trophies, on a ground of cerulean blue. The beams of the building, which are ornamented with plaster, are decorated with gold and colours. The rest of the interior is in harmony with the ceiling. The walls will be a pale maize, with an inlaid ornament. The cornice will be in white dead enamel, but profusely gilded.

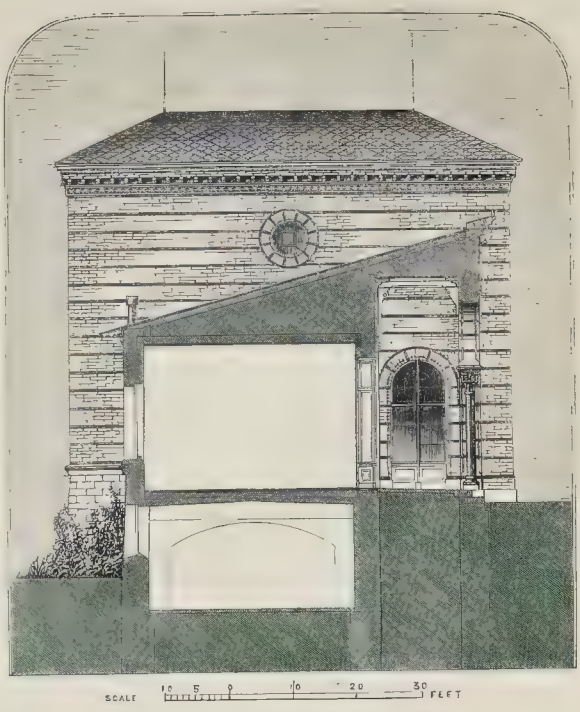
Leeds.—At a special meeting of the Townhall Committee of the Leeds Town-council, held for considering a new design for a tower

or the Townhall, by Mr. Brodrick, the ventilation of the building, and other matters, the committee, by a majority of eight to four, according to the local *Intelligencer*, have decided to recommend its adoption to the council. The cost is estimated at something like 5,500*l.* which is considerably less than the sum estimated for the design some time ago under discussion in the council. The committee also decided to recommend the council to grant 4,000*l.* for ventilating the building, and 1,500*l.* for fixtures; making a total of some 11,000*l.*——A meeting of the committee for rebuilding the National Schools in Kirkgate, has been held, and 900*l.* subscribed. The estimated cost is 4,000*l.*

Grantham.—At a recent meeting of the Town-council of Grantham, attention was called to the arrangements for the erection of a statue to the late Sir Isaac Newton; and it was stated that there was no definite answer from Government as to granting metal for the statue, although metal would be supplied; but at present Government had none to spare. If peace were established they would soon have metal. The cost of the statue would be 400*l.* or 500*l.*

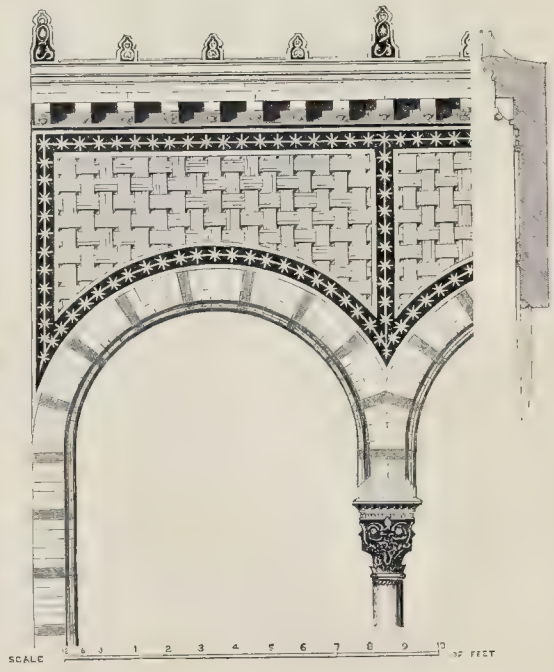
Crook, near Darlington.—Substantial schools have been erected at Crook, at the expense of the owners of Pease's West Collieries (Messrs. Richardson and Ross, architects), and were opened with considerable *éclat*. The schools are to accommodate about 250 children. The buildings comprise a school-room, 65 feet by 28 feet; boys' class-room, 16 feet by 13 feet; girls' class-room, 16 feet by 12 feet, with separate porches. A commodious residence for the master is attached to the school, comprising parlour, kitchen, scullery, and three bed-rooms; the whole being supplied with convenient water-closets and other outbuildings. The materials are rubble stone for walls, with Brusselton stone dressings; the roofs being slated. The school-room and class-rooms are heated with hot water, by Longbottom and Co. The whole cost of the buildings, with boundary walls and fittings in the school-room, will amount to about 1,300*l.*

Leighton Buzzard.—Tenders have been received for an ornamental shop-front for Mr. Sharman, of Leighton Buzzard (Mr. W. C. Reed, architect), ranging from 580*l.* (T. Piper and Son), to 512*l.* (W. Brass and Son). The tender from Bunnett and Co. for revolving shutters and iron columns was 145*l.*



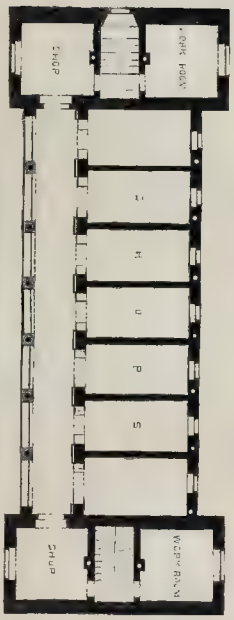
Dunfermline.—It having been satisfactorily proved, says a Scottish contemporary, that Dunfermline was a city in years long past, the Ordnance maps are to have it marked out as a city. Thirty years since and upwards, we happen to recollect, Dunfermline was very commonly known to be a city, and spoken of as such in ordinary talk.

Dublin.—In reply to a deputation from the Royal Dublin Society, who waited upon the Lord Lieutenant, at Dublin Castle, to request his Excellency to appoint a time for laying the first stone of the new Museum of the Society, the first week in March was named for the performance of the ceremony.



GALLERY OF SHOPS AT VOESLAU, AUSTRIA.

FOR some time past the architects of Germany, in designing their buildings, have striven for truthfulness, and they have sought to let the system of construction employed show itself, and to graft on to this, or rather obtain from it, elegance and beauty. The set of small shops, illustrated by the accompanying engravings, have been built at Vöslau, from the designs of Ludwig Förster, the editor of the well-known and very valuable work, the "Allgemeine Bauzeitung," wherein the view was published. M. Daly then gave it in his "Revue," and we have re-engraved it from that source. The object of the building is to afford accommodation during the bathing season, for the dealers in various articles produced on the spot, or of general utility. The arrangement is simple and honest, and the general effect good. The columns are of cut stone: the walls are of brick, varied in colour: the decorative fillings-in are of plaster of Paris; and the salient decorations are of stone, or of pottery.



GALLERY OF SHOPS AT VOESLAU, IN AUSTRIA.

GALLERY OF SHOPS AT VOESLAU, IN AUSTRIA.—M. LUDWIG FÖRSTER, ARCHITECT.

CHURCH-BUILDING NEWS.

Swansea.—The committee for the erection of St. Peter's chapel of ease to the mother church of St. Mary's, Swansea, met on Monday before last to receive tenders for the building of the chapel, when the lowest was declared to be that of Mr. Joseph Richards, builder, of this town, and was unanimously accepted. The sum yet to be raised to complete the building is 750*l.* A burial-ground is attached to the chapel of ease.

Taunton.—The consecration of the cemetery for the parishes of Taunton St. Mary Magdalene, and Bishop's Hull, took place on Tuesday before last. The cemetery, of about eight acres, occupies a field at Mountway. It is divided so as to allot about three-fifths—*i. e.* the eastern portion—to the Church of England, and the remaining two-fifths to the Dissenters. Besides the principal gateway there is an entrance—cast-iron gates—from the Bishop's Hull-road. The lodge contains a board-room, 17 feet by 12 feet, and residence for the keeper. The lodge is entered by a half-timbered porch. The buildings are in the Early Decorated style of old English architecture. The chapels are similar in design and in dimensions, being 31 feet 6 inches by 18 feet. They are roofed at a high pitch with stained pine, having arched braces moulded, and springing from angel corbels, carved in Bath stone. The fittings (to seat forty persons in each chapel) and reading-desks are of wainscot, of ornamental character. The windows, of varied design in their tracery, and having carved heads to their hood moulds, are of Bath stone; also the copings and dressings of turrets in the gables. The buttresses and quoins are of Westleigh limestone, and the facing of coursed Blagdon flint. Each chapel has a vestry. The contractor was Mr. W. Shewbrooks, of Taunton; the architect Mr. Ashworth, of Exeter, who also planned the laying out the ground, &c. Mr. Robert C. White, of Taunton, was clerk of the works; the contractor for the iron railing, Mr. Joseph Savery, of this town; and for roads, Mr. William Badcock. The outlay, according to the *Taunton Courier*, from which we quote, has been about 1,850*l.*; fences, about 800*l.*; and roads, 400*l.*

Cheltenham.—In addition to the work of re-roofing the nave of the parish church here, it is now proposed (but not yet decided on) to remove all the pews on the ground-floor and to put in low seats, similar to those in the two new churches of St. Peter and St. Luke, in the same town.

Bath.—The Bathwick cemetery was recently consecrated. The spot selected is one of the most secluded near the city: it is in a vale under Smallcombe Wood. The land consists of about two acres and a half, a portion of which, according to the *Bath Chronicle*, was granted by Lord William Powlett, the remainder by the rector. In the centre of the ground is a mortuary chapel, in the Early English style of architecture, designed by Mr. Thomas Fuller, of this city, architect to the Bathwick estate, and built by Mr. G. Mann, also of Bath. Above the doorway rises the campanile. The height of this portion of the structure is 45 feet, not including the cross by which it is surmounted, while that of the body is 26 feet, with an extreme length of 44 feet, and a breadth, including the buttresses, of 27 feet. It is lighted by a large window on the east and three small windows on either side, fitted with stained glass. The ground has been laid out by Mr. D. Butler, of Widcombe. On the south side of the ground a sloping bank has been constructed, which will admit of catacombs being constructed in the hill-side, and monuments being erected on the upper terrace. There is at present no lodge at the entrance, but merely a simple gateway: it is intended, however, as soon as sufficient funds can be obtained, to construct a lodge in the same style of architecture as the chapel.

Sandon.—According to the *Chelmsford Chronicle*, Sandon Church has been restored at a cost of about 300*l.* The old pews have been replaced by uniform seats, 2 feet 10 inches high, and 2 feet 3 inches wide, with inclined backs, and without doors. By this rearrangement the number of seats is greatly increased. The floor is raised 8 inches, and repaved with red, white, and black tiles. The paint has been taken off the ancient carved oak pulpit, which has been restored by Messrs. Ringham, of Ipswich. A new reading-desk has been provided. Two new stalls have been obtained in the chancel, with carved ends (by Ringham), the ancient wood carving of the chancel pews having been worked into the stalls. The altar rail, which is new, is supported by iron standards, and the floor within is laid with Minton's tiles. The communion-table has been restored. The whole work has been completed by Mr. Sorrell, of Great Baddow. In pulling down the old pews, an ancient piscina was brought to light, and some fragments of ancient encaustic tiles were also found.

Newark.—The ceremony of laying the foundation-stone of the consecrated chapel connected with the new cemetery, took place on Saturday before last. The architects are Messrs. Bellamy and Hardy, of Lincoln; and the contractor, Mr. Whitworth.

Lincoln.—The Dean and Chapter have restored the oriel window in the north great transept of the cathedral. The stone-work, which had become much injured by time, has been made good. The glass has been re-set, and the damaged portions replaced by new pieces.

Crowle.—It is proposed to add a chancel to St. Stephen's Church, Crowle, Lincolnshire, with open roof and Decorated window. The pillars on each side the communion-table will be gilded. The seats are to be of carved English oak. The east window is to be filled with stained glass. Mr. J. Owen is the architect.

St. Bees.—The ancient abbey church of St. Bees was lately reopened, after various improvements and alterations.

Newcastle-upon-Tyne.—The foundation-stone in connection with the necessary buildings and ground of All Saints' cemetery, at the Minories, has been laid. Mr. John Green is the architect, and Mr. James Gibson the contractor.

Gateshead.—A chapel was lately opened for divine worship at Mount Pleasant, Gateshead, belonging to the Methodist New Connexion. It is built in the Gothic style, with windows of stained glass. The architect was Mr. M. Thompson.——The congregation of the Blackett-street Presbyterian Church some time since appointed a building committee, and resolved that so soon as the treasurer had 1,000*l.* in hand, the committee should proceed to obtain plans for a new place of worship. Since then, the committee, says the local *Observer*, having obtained nearly 200*l.* more than the specified sum, gave notice to some architects of their readiness to receive designs for the proposed new chapel. Four architects complied with the invitation, and, on the recommendation of the committee, the congregation have approved of the design of Mr. Thompson, and awarded him the offered premium. The new edifice will be in the Decorated style.

STAINED GLASS.

Ilam.—Two stained-glass windows—an eastern triplet and a south aisle three-light—are to be executed from the designs of Mr. J. R. Clayton, of Albany-street, Regent's-park, and erected in Ilam Church, Staffordshire.

Regent's-park.—The same artist has also just completed the designs and cartoons for the large window which is to be erected to the memory of the late Mr. R. C. Carpenter, architect, in the Church of St. Mary Magdalene, Munster-street, Regent's-park.

Chelmsford.—Holy Trinity Church has just received the addition of a stained-glass window, encased in new Caen stone work, at the eastern end of the chancel. The subjects are in three compartments, the centre window representing the Saviour on the Cross, and St. Mary and St. John on either side. In the right window is the Saviour bearing his Cross to Calvary, followed by two soldiers, and near him is a kneeling female figure in tears. In the left window the Saviour is appearing to St. Mary Magdelene. The lower parts of the three lights are filled with angels in different attitudes, and across runs a scroll, on which is inscribed the name of the lady in memory of whom the window is dedicated. In the canopies are angels bearing a spear, and sponge on a reed. The upper tracery has four figures of angels and symbols, chiefly referring to the Trinity. The glass was supplied by Mr. Warrington. The stonework of the window and the exterior wall of the chancel was executed by Mr. Bremer, mason, at the almost sole expense of the rector.

Braintree.—Two painted windows have been erected in Bocking Church, on the south side of the Dean's Chancel, at the expense of the dean. They are the production of Mr. George Austin, of Canterbury, who has in all erected eighteen windows in the cathedral of that city.

Glasgow Cathedral.—Stained-glass windows are to be placed in this ancient edifice, the cost being borne chiefly by private individuals. The *Herald* says, the public bodies and individuals, or rather families after named, will each take one of the windows of our venerable minster under their care:—1. The Lord Provost. 2. The Government. 3. Messrs. Baird, of Gartsherrie. 4. The Corporation. 5. The Trades' House. 6. Messrs. John Tennant and Co. 7. William Ewing, esq. 8. James Stirling, esq. of Cordale. 9. Robert Monteith, esq. of Carstairs. 10. Messrs. Campbell and Co. 11. The Houldsworths. 12. The Dennistouns. 13. The Crums. 14. The Faculty of Procurators. 15. The Merchants' House.

THE COMPETITION FOR CHURCH AT LILLE.

ABOUT forty sets of designs, we learn, have been sent in for the church of *Notre Dame de la Treille*; some of them executed with an immense amount of care. The exhibition of them will be opened on the 13th inst. in the upper part of the *Halle au Blé*, a large corn-market, built by M. Benvignat, of Lille, and it will close on the 25th. No place could have been found better suited for the purpose to which the *Halle* will now be applied. The drawings from France alone, we are told, will cover about 1,000 square yards. The decision is promised at the end of the month.

DESTRUCTION OF COVENT-GARDEN THEATRE.

COVENT-GARDEN THEATRE was destroyed by fire on the morning of Wednesday last. Within a few minutes after the discovery, a little before 5 a.m. the flames had obtained possession of the whole interior,—thus once more illustrating the remarks which we made last year, and previously, on the necessity of proper means of exit from places of public entertainment. In the present instance, though no lives appear to be lost, many of those who were present at the *bal masqué*, then terminating, had narrow escapes. Indeed, independent of the defects of plan which are so general, the materials used and the method of construction in the London theatres render them—sooner or later—we might say, inevitably—the prey of fire. We shall have better opportunity, before our next number, of ascertaining what was the exact origin of the conflagration in this instance. At present the bare walls, and the columns and pediment of the portico are alone standing. Bond timber seems to have been introduced, or been left in the walls, at the last alterations, to a greater extent than was supposed; and this having been burnt out, the walls appear at this moment in a dangerous condition. The present, or rather late, building was the third erected on the site. It was originally designed by Sir Robert Smirke, and replaced the theatre burnt down on the 20th September, 1808, and designed by Henry Holland, also the architect of Drury-lane Theatre, which, too, was destroyed in a similar manner. Of both these buildings, last named, and their architect, some particulars will be found in the papers on the Recent History of Architecture, in our last volume. Of Sir Robert Smirke's building, the first stone was laid on the 31st of December, in the year of the fire, or with an interval of little more than three months, and the building was opened on the 18th September in the next year, 1809. The portico was one of the earliest examples of the revival of the Grecian Doric order; though we need not tell our readers that it was not a copy of the portico of the Parthenon, as we are told by

one newspaper writer. The interior of the building was remodelled or rebuilt, within the recollection of our readers, by Mr. Albans, and was described in our volume for 1847, where a view will be found.

All must lament the dreadful disaster which has occurred, not merely for the sake of Mr. Gye, but of the public.

DESTRUCTION OF THE NEW CHURCH AT OVER-TABLEY.

ST. PAUL'S, at Over-Tabley, near Knutsford, completed in March, last year, at a cost of about 1,500*l.* has been gutted by fire, caused, it is supposed, by the overheating of the hot-air apparatus, or some defect in it. The *Macclesfield Courier* says:—"On an inspection of the interior of the hot-air chamber, it appeared that the smoke flue of the furnace, after rising about half a yard, was carried at right angles into the brick flue, built in the wall, entering immediately below the brick-arched covering of the air chamber. This flue rising perpendicularly about 2 feet was then carried obliquely into the chimney, in the corner of the vestry, entering it on the square of the building. This flue, at the point where it entered the chimney, was covered by a flagstone, above which were two courses of bricks, on which rested the wall plate. This flag was found to have been cracked in two places, and showed, as also did the iron bar and rod on which it rested, that it had been sometimes red hot; and from this circumstance it was at first supposed that there having been a lodgment of soot at this point, the fire had originated here. But it was stated, by a person living near the church, that the flue had taken fire some time in November last, and that the flames on that occasion had risen two yards above the top of the chimney: it is, therefore, not improbable that the mischief shown here might have been caused at that time. The flue was eight inches square, and its course upwards had been brought within a brick's width of the joists and floor of the vestry—and it is supposed that the bricks here would become red hot. The flooring of this part of the vestry, it had been frequently remarked, was exceedingly hot. The opinion of the gentlemen assembled appeared to be that the fire had originated at the bottom of the flue, but that it was uncertain whether ignition had first taken place there, which would be in the flooring, or at the top, near the wall plate: circumstances were, however, rather in favour of the former supposition."

We need scarcely say that our object, in chronicling such disasters, is not to give pain or attach blame, but to awaken the attention of builders, clerks of works, and architects, to the paramount necessity for care in the construction of flues.

FALL OF THE SHIRE-HALL STAIRCASE, CHELMSFORD.

THIS sad accident has caused great consternation, as might have been expected, and should lead to the examination of other staircases elsewhere. The *Chelmsford Chronicle* gives particulars of the inquiry which has been made, and quotes a paragraph from its own pages, of January, 1792, showing that the architect of the building was Mr. John Johnson, and that he received a piece of plate, of the value of 100 guineas, "as a public testimony of his integrity and professional abilities in the execution of the said Shire House, as architect and surveyor of the county of Essex."

The steps were of stone, and had been often chipped and repaired. They were tailed into the partition wall at one end. The balusters first gave way, and then the steps broke off, leaving the ends in the wall.

WHITE-LEAD AND ITS ADULTERATION.

IN the *Builder* of Feb. 16th, I observe some remarks on the adulteration of white-lead. As this subject is quite within the province of an analytical chemist, I beg to offer tests for all the substances I can think of likely to be mixed with the above metallic oxide for fraudulent purposes. Of course, the amount of such adulteration can only be ascertained by a complete analysis,* but, for the determination of the kind of admixture, I flatter myself the following rules may be of service:—

1. *Carbonate of Lime* (any form of *chalk, whiting, &c.*)—To detect this substance in *commercial white-lead*, about 40 or 50 grains of the latter must be introduced into a *beaker*, a bottle of white glass, or other suitable vessel, and 3 fluid ounces of dilute hydrochloric acid (otherwise *muriatic acid* or *spirit of sea-salt*,—1 part of the strong acid to 4 or 5 of *distilled water*) added with agitation: then allow the whole to remain for an hour or so, unless means are at hand for boiling it, when this operation, and the use of a clean Florence flask, will expedite the operation. To the clear liquid, poured off, or if necessary, filtered through blotting-paper, add a little *solution of ammonia*, until it smells strongly of the latter, when the addition of some *oxalic acid*, dissolved in water, will cause a white precipitate, or *milkiness*, if there is any carbonate of lime in the sample tested.

2. *Sulphate of Lime* (*gypsum, selenite, plaster of Paris*).—An equal quantity of the *white-lead* should be *boiled* with dilute *nitric acid* (about the same quantity and of the same strength as the hydrochloric acid used in the last experiment), until the addition of more causes no effervescence or other action. Then filter the whole, and throw away the solution; but if anything undissolved remains upon the filter, wash it well with water, and afterwards put in a bottle a large quantity of the same fluid: after some time pour off a little of it (clear), and add ammonia and oxalic acid as before. In this case, a milkiness would mean presence of sulphate of lime.

3. *Carbonate of Baryta* (*witherite, heavy spar*).—Treat with hydrochloric acid as in No. 1. Add solution of *sulphuret of ammonium*, until the liquid has acquired its characteristic odour of rotten eggs: boil until it emits no smell, and filter from the black powder, which is thrown down. To the clear solution, add a saturated one of *sulphate of lime*, when *sulphate of baryta* will be precipitated, if the carbonate of that base is present in the original *white-lead*.

4. *Sulphate of Baryta* (*sulphate of barytes*—native).—To determine the presence or absence of this substance, the pigment under consideration may be boiled with dilute nitric acid, in the manner directed in the exp. No. 2: if a residue is obtained quite insoluble in acid or water, it will most probably be *sulphate of baryta*, which will give a *green tint* to a flame, if introduced into one on the point of a *perfectly clean* wire.

5. *Clay* (any kind of *pipe-clay, porcelain clay, &c.*)—If the residue from the *nitric acid* ebullition has an unctuous, plastic feel in the fingers, it is *clay*. Enough of it being obtained, it may be mixed with a sand, kneaded with water, and baked (*at a red heat*): its texture will then reveal its composition.

6. *Starch* (*flour, &c.*) may be detected by boiling with water, and adding to the filtered liquid a little solution of *iodine* (1 *grain to* 1 *ounce of water*), which will strike a beautiful blue colour if any starch is present.

The *salts* and *reagents* mentioned may be obtained at any respectable operative chemist's. I would especially recommend Messrs. Jackson and Townson, 89, Bishopsgate-street, City.

A few Florence flasks, two dozen test-tubes, and a *washing-bottle* (for directing a stream of water upon a precipitate), will be all the apparatus necessary. In the preceding experiments, I have supposed that the *white lead* is dry,—in powder,—as, when mixed with *oil* or *turpentine*, a novice cannot detect adulterations without great difficulty: however, *generally* these oleaginous substances may be got rid of by repeated digestion in *strong alcohol and ether*, until the *colour* no longer refuses to mix with water; or the oil, &c. may be burnt off in a crucible. Of course starch cannot afterwards be detected. I shall be happy to give any further information, if required.

WENTWORTH L. SCOTT.

* A sample forwarded to me (Care of the College of Chemistry, London) for this purpose, would receive immediate attention.

MENTAL CALCULATION.

INSTITUTION OF CIVIL ENGINEERS.

ON February 19th, Mr. Robert Stephenson, M.P. President, in the chair, Mr. Bidder, referring to the great advantages he had derived from the power of mental calculation, which had given him a rare and unusual facility in dealing with numbers, proceeded to lay before the meeting his general views on the subject.

He was convinced that mental calculation could be taught to children, and be acquired with greater facility and less irksomeness than ordinary arithmetic; although, of course, a child in whom there existed a predilection for calculation would even then be as remarkable, and take as prominent a position as in the acquisition of any other subject.

Before entering more minutely into the subject, it was necessary to enunciate, as a principle, that there was not any Royal or short road to mental calculation: the processes were, like all others in arithmetical computation, to be performed *seriatim*; as, whatever might be the number of figures employed in a calculation, they were only so many symbols, to be dealt with precisely as they would be exhibited in algebraic formulæ, with which the calculations might be considered as identical. In point of fact, many of the processes of mental computation, if produced on paper, would appear most prolix and complicated: they could, however, be accomplished mentally, in consequence of the faculty of occupying the mind simultaneously with the double task of "computing" and of "registering." The first, computing, was executive, or reasoning, and was that portion of the process which, whilst it was the most active, was not that which caused the greatest strain on the mind. When it became necessary to record the result, the second faculty, registering, was called into play. Now it was this latter occupation of registering that was the real strain upon the mind, and by which alone the power of mental computation was limited.

Experience had shown, that up to a certain point, the power of registering was as rapid as that of thought; but the difficulty increased in a very high ratio, in reference to the number and extent of impressions to be registered, until a point was reached where registration in the mind and by writing were exactly balanced: below that point mental registration was preferable: above it, that by writing would be as quick and be more certain. Therefore, the mental process, as compared with the operation of writing, was as the speed of lightning to that of an express train; and if the power of registration could be maintained at all times upon a par with the executive faculty, there would be no difficulty in computing, with immense rapidity, a table of logarithms up to 10 places of figures.

His earliest recollection was that of counting up to ten; then up to 100, and afterwards to 1,000; then, by intuitive process, he taught himself the method of abbreviating the labour of counting; arriving, in fact, at the natural multiplication of numbers into each other, attributing to each a separate and individual value.

In this manner, the actual value of every number, up to 1,000, was impressed on the memory, and he then proceeded onwards *seriatim* up to a million. It was his practice to count numbers practically with peas, marbles, or shots, to compose rectangles of various values, and by counting them the multiplication table was ultimately the result of actual experience and test, and he attained an intimate acquaintance with numbers multiplied with each other, by a tangible process, divested of that formidable character under which it was generally brought before the young student.

Multiplying 173 × 397, the following process was performed mentally:—

100 by 397 = 39,700
70 by 300 = 21,000 = 60,700
70 by 90 .. .. = 6,300 = 67,000
70 by 7 .. .. .. = 490=67,490
3 by 300 .. .. .. = 900=68,390
3 by 90 .. .. = 270=68,660
3 by 7 .. .. = 21 = 68,681

The last result in each operation being alone registered by the memory, all previous results being obliterated.

To show the aptitude of the mind by practice, he would know, at a glance, that 400 × 173 = 69,200
and then ..... 3 × 173 = 519
the difference being..... 68,681 as above.

On the 26th ult. Mr. Bidder resumed his exposition.

With regard to addition and subtraction, it would be perceived, that the same principle, as already explained for multiplication, was adhered to, viz.; that of commencing with the left-hand side, or the large numbers, and adding successively, keeping one result only in the mind. This had the further advantage, that the moment the large figures were operated upon, the mind was no longer charged with them, and they might be dismissed, as it was no longer incumbent to register them. Now, the mere getting rid of this feeling, of its being necessary to charge the memory with them, set the mind free to continue the rest of the operation: it did not follow that he did forget the sums, or figures to be dealt with, still, getting rid of the feeling of the necessity of accurately recollecting them was of manifest advantage. Some examples, both of addition and subtraction, were then given.

Division was, as in ordinary arithmetic, much more difficult than multiplication, as it must be a tentative process, and was only carried out by a series, more or less, of guesses; but no doubt, in this respect, the training arrived at by mental arithmetic gave the power of guessing, to a greater extent than was usually attained, and afforded a corresponding facility in the process. Supposing, for instance, it was necessary to divide 25,696 by 176, the following would be the process:—100 must be the first figure of the factor: 100 times 176 were known at once to be 17,600: subtracting that from 25,696 there remained 8,096: it was perceived that 40 was the next number in the factor: 40 times 176 = 7,040: there then remained 1,056—that it was immediately perceived gave a remaining factor of 6, making in all 146. Thus only one result was retained in the mind at a time; but as contrasted with multiplication it was necessary to keep registered in the mind two results which were always changing, viz.,—the re-

mainder of the number to be divided, and the numbers of the factor, as they were determined; but if it was known, as was the case in the present instance, that 176 was the exact factor, without any remainder; having got the first factor—100—which was perceived at a glance,—it was known, that there were only four numbers which, multiplied by 76, could produce a result terminating in 96, viz.; 21—46—71—and 96; and, therefore, the immediate inference was, that it must be 46, as 121 must be too little, and 171 must be too much, therefore 146 must be the factor. Thus, as before observed, the only facility afforded by mental calculation was the greater power of guessing at every step towards the result.

Square and Cube Roots.—Perhaps there was nothing in which the mental process caused greater astonishment than in resolving the square and cube roots, more particularly the latter; and perhaps in none was it less entitled to occasion wonder, because it partook more of "sleight of art," than of any real power of mind, or of any real useful application of means, as would be apparent on considering them. It was at about the age of somewhat less than twelve that Mr. Bidder was first asked to extract the square root; but before he could comply with the requisition, it was necessary to explain to him what the square root meant, and this was explained by showing that 400 was the square of 20, and that 20 was the square root of 400. As might be expected, all who tested his powers were generally prepared with the means of ascertaining the accuracy of the answers. Now it was well known that the easiest application of multiplication was in squaring numbers, and that it was much more easy than extracting the roots: the consequence was, that those who propounded the questions squared, or cubed, a number, and then gave the result, whence to extract the root; and, if the answer agreed with the number they started with, they were satisfied. The consequence was that nearly every example proposed was a true square or cube; hence the following expedient was hit upon. It appeared, on reflection, that whatever might be the two last figures of a true square, as, for instance, 61, could only be produced by the square of four numbers, viz.,—19, 31, 69, 81; hence, if called upon to extract the square root of 337,561, Mr. Bidder knew instantly that 500 must be the first part of the root, because 10,000 was the square of 100; hence that the hundreds in the square roots of 330,000 would correspond with the digits in the square root of 33, viz.,—5, or 500 in the larger denomination. Having ascertained this, he had to choose between the four other numbers to ascertain the remaining term of the square root; and he was enabled at a glance to perceive that it must be the larger number, 81, from the fact that 81 was to 100 (the difference between 500 and 600), nearly in the proportion of 87,000 to 110,000 (the difference between the square of 500 and 600). As regarded the terminal 25, the square of all numbers ending in 5 terminated in 25; hence it would seem that the choice lay between all the numbers ending in 5 up to 95; as, for instance, in extracting the square root of 442,225, of course, as before, it would be known that the first term was 600, but although the square of all numbers ending in 5 would always terminate in 25; yet there was this guide, that numbers ending in 5, 45, 55, and 95, had no hundreds interposed after the thousands, as, for instance, the square of 155 was 24,025;—then the square of numbers ending in 15, 35, 65, and 85, terminated in 225; as, for instance, the square of 185 was 34,225; and, again, numbers ending in 25 and 75 terminated in 625; as, for instance, the square of 125 was 15,625; therefore with regard to the root of the proposed number, it must lie between the numbers 15, 35, 65, and 85, and from the proportion of the excess of the proposed number over the square of 600, it was evident that it must be 65, therefore it was concluded that the root was 665.

Mr. Bidder went through a number of processes, but we are unable to follow him further. He contended justly, from his own experience, that a facility in using mental arithmetic, combined with an intimate knowledge of the laws of mechanics, must necessarily prove of great utility to the civil engineer: so far as regards himself, it had materially aided his individual career—it had aided him in times past, in suggesting matter for cross-examination, and, as might be imagined, had proved very embarrassing to the witness.

TRISECTION OF AN ANGLE.—In reply to a request, some time ago, for the means of effecting this, we have received several attempts to solve the difficulty, but none which would stand examination. Those of our readers who are desirous of accurate information upon the subject may find it by referring to the article thereon in the *Penny Cyclopædia*. They will there see that it is a problem of the same class as the "Quadrature of the Circle."

COMPETITIONS.

Liverpool Free Public Library and Museum.—Our readers have doubtless observed the advertisement offering premiums for the best designs for the intended building on the north side of Shaw's Brow, Liverpool. The institution will be divided into two departments, the library and the museum, and these are to be kept so far distinct that they can be separated if necessary. The reference library must contain space for at least 100,000 volumes, with accommodation for 500 readers at one time. The lending library must contain space for about 20,000 volumes. As to the museum, the present collection will require about 1,350 lineal feet of wall space. The cost of the building is not to exceed 20,000*l.* There is this peculiarity about the case, that the chairman of the committee is an architect, Mr. J. A. Picton, and one anxious to aid in improving the conduct of competitions, so that the profession may feel assured of fair play. When we last heard, there had been above *three hundred applications* for particulars and plans; above 100 from London alone! It has been suggested in Liverpool that the competing architects themselves should be the committee to make the selection.

ELY SANITARY WORKS.

THE tubular system of sewerage and drainage has now been in operation in the city of Ely for the last sixteen months; and although the low-level sewer has only a *fall of one in a thousand*, it has proved, we are informed, successful. There are upwards of nine miles of public sewerage pipes, and the largest is 12 inches in diameter.

The water-supply is obtained from the river Ouse: it is drawn from the river into a filter-bed, from which it is pumped by a 12-horse high-pressure steam-engine (through 1,400 yards of 8-inch main) into a malleable iron tank, placed on the top of a brick tower, and surrounded by a brick screen, and roofed over with wood covered with asphalte. The tank is 65 feet diameter, by 16 feet deep, and contains 330,881 gallons of water. The total weight of the tank is 45 tons, and it contains 1,485 tons of water.

There is only one main pipe, which enters the bottom of the tank, and answers both for conveying the ascending water into the tank, and the descending water for supplying the town.

There are upwards of nine miles of water-pipes laid down, and the total cost of the works, according to our informant, is 14,000*l.* Mr. William Burns was the engineer.

OXFORD ARCHITECTURAL SOCIETY.

AT the third ordinary meeting, held on the 13th ult. Mr. James Parker delivered a lecture "On the Style of the Thirteenth Century." He took as the groundwork of his lecture the differences which Gervase enumerates between the old Canterbury choir which existed before the fire, and the new choir, which is the one now standing, and is a good specimen of the Early English style. The "elongation of the pillars," he contended, exhibited a new and important principle, and he showed how it was observable, not only in the general design, but even in the sculpture. The second difference mentioned by Gervase, viz. "the capitals were now carved with a chisel, not with an axe," explained the origin of the other great principle, namely, that of *undercutting*, which was shown to pervade all the sculpture and mouldings of the period. The lecturer then explained the changes which Gervase mentions with regard to vaulting, and this led to the consideration of the origin of the pointed arch, which was not mentioned by Mr. Monk in the enumeration of the striking and important changes which he noticed. Mr. Parker did not consider the pointed arch as any new principle in design: it was simply a convenience in construction, and was a most fallacious guide in fixing the dates of buildings, as it was found much earlier than the thirteenth century, and this was the reason why he would never employ the terms first, second, and third pointed, as they expressed no principle, and, instead of assisting the student, were calculated to confuse and mislead him.

Mr. Willis agreed with all Mr. Parker had said: he wished, however, he had laid more stress on the pointed arch, which he thought was the very essence of the Pointed style. He believed there were five theories. 1. That Mr. Parker had explained, which arose from the necessities of saxpartite vaulting. 2. That the pointed arch was suggested by the effect of the intersections of the two round arches in quadripartite vaulting. 3. That the idea had been taken from the intersecting arches which were in such common use. 4. That it was brought into England by the Crusaders. 5. (A very fanciful one) that it was suggested by the figure called Vesica piscis. Mr. Willis did not know to which to give the preference, but thought that, perhaps, all contributed in a degree to the discovery.

On the 20th of February (we are availing ourselves of the local *Herald*), Mr. Parker gave the third of the series of elementary lectures. He began by pointing out that the change from the Early English to the Decorated Style began in the latter part of the thirteenth century, although it was not fully established until the fourteenth. He defended Rickman's name of Decorated as good and appropriate,—window tracery, from which it is named, being more essentially part of the structure than the decorations of any other style; and however plain a building may be, this distinguishing mark of tracery is never wanting. He then gave a slight sketch of the origin and development of tracery, illustrated by a selection of engravings, and referred the members for more full information to Mr. Freeman's work on Window Tracery. He described the peculiar character of Decorated foliage and ornament, its truthfulness and fidelity to nature, and the absence of the conventionalism and the deep undercutting of the Early English style. He also mentioned the ornamenting the flat surface of the wall with Diaper patterns, and showed specimens from the Eleanor crosses at Geddington, of which there are casts in the Society's collection. He also referred to Mackenzie's work on St. Stephen's Chapel, Westminster, which was placed on the table, and expressed his regret that the English Royal Chapel should have been entirely destroyed at the very time that the French Royal Chapel (La Sainte Chapelle in Paris) was being beautifully restored.

BUILDING NEWS FROM CANADA.

A NEW Baptist church has been erected at Woodstock, from a design in the early English style of pointed architecture, furnished by Mr. David Murray, of Hamilton, architect. The building is 65 feet long and 42 feet wide, and has a basement room 9 feet high, under the whole church, which stands north and south, with steeple at the south end. It has been ventilated and warmed on a plan said to be invented by Sheriff Rutland, of Coburg, C.W.; but merely consisting of the introduction of warmed air from a ventilating and warming stove in the basement, and the withdrawal of air under the floor through two air chimneys in the north wall, which thus ventilate the whole, while drawing the warm air down from the ceiling to circulate among the feet of the sitters. The same system has been applied to the new jail of the county of Oxford, and the Hamilton jail, and other buildings. The Welland county jail is also about to be warmed and ventilated in the same way, as also the Merritsville jail and a large church at Guelph. The Woodstock Baptist Church is built of white bricks produced at Woodstock. The courses, buttress caps, and dropstones are of Ohio freestone, varying slightly from the colour of the bricks. The spire was left unfinished for the season. The basement is to be occupied as school-room, and for lectures, &c. The windows of the chapel are of diamond pattern, with outer borders of stained glass.

SOLID SWISS PARQUETERIE.

The Solid Swiss Parqueterie, which is gradually becoming known in England, promises to supply a want. It is made solid throughout, and every portion of the ornamental woods forming the patterns is grooved and tongued together, and jointed with marine glue. It can thus be fixed immediately upon the joists when applied for flooring, rendering under flooring unnecessary. This Parqueterie has also the advantage of being much lower in price than the ordinary veneered work which has hitherto been in use. Being manufactured by machinery, and in large quantities, a great reduction in its cost has been obtained, and it can be supplied in London at prices commencing from 1s. per foot super. It is now being laid at the house of the Turkish ambassador, amongst other places. It seems only right that we should make it known to our readers.

ARCHITECTS' BILLS.

ASHPITEL AND WHICHCORD *v.* THOMSON.

THIS action in the Court of Common Pleas, Guildhall, February 19, was brought to recover the sum of 39*l.* 5s. 5d. for professional services rendered, and for money paid by the plaintiffs. The defendant is a draper in the Edgware-road. Mr. Laxton appeared for the plaintiffs, and Mr. Collier, Q.C. for the defendant.

The defendant's house having settled, the plaintiffs were called in to give their opinion, and afterwards superintended the works for the repair of the settlement, and checked the account of Mr. Stopher, the builder. The defendant, in January, 1853, being desirous of having the premises re-erected, consulted

the plaintiffs, stating that he wished his business interrupted as little as possible. The plaintiffs suggested an iron house, lined with slate: the defendant approved of this, and the designs were prepared, and arrangements made that the old premises should be pulled down, and the new building erected in five days. The defendant determined on having the designs submitted to the official referees. The old Metropolitan Buildings Act not providing for a building of this description, the case was ultimately referred to the Treasury, who granted permission for the erection of the building. The defendant, however, altered his mind, and would not have it erected.

The defence was, the plaintiffs had been called in by the builder, and that they were acting on his behalf, and not for the defendant, and that they undertook to prepare the designs for the iron house for costs out of pocket in event of the house not being erected. The jury, after retiring to consider their verdict, came into court, and gave a verdict for the plaintiffs for 28*l.* 5s. 5d.

PRINTS.

Fruit, after Lance.—Messrs. M. and N. Hanhart have just produced, in chromolithography, a fac-simile of one of Mr. Lance's gorgeous fruit pieces, including a melon, grapes, currants, and plums, on a piece of matting. It is a very successful and beautiful specimen of the art, and we are not surprised to hear that Mr. Lance has passed a most favourable opinion upon it. The many touches that go to produce the varied surface of the melon are admirably rendered. The same firm has also issued a "View of Paris," after Mr. T. Boys—a view comprising the Louvre, the Seine, and the bridges.

Messrs. Rowney have now on view a collection of chromolithographs which deserve attention.

Portrait of Professor Edward Forbes.—The friends of the late Edward Forbes (who was taken from the world too soon) will find the portrait of him which has been published by Mr. Claudet, at his Gallery in Regent-street, an excellent memorial of him. It is engraved by Mr. Charles Cook, from a daguerreotype by Mr. Claudet, who has done much good service in his art.

RECENT PATENTS.

AMONGST the specifications of patents recently granted are the following, extracted from lists reported in the *Mechanics' Magazine*:—

Page, J. "Improvements in moulding or shaping metals." In this invention, in casting such articles as pipes, core-bars, "capable of expanding and collapsing in diametrical dimensions," are employed. These core-bars are each composed of longitudinal pieces of segmental metal plates, so combined as to be capable of forming bars of various diameters, and are adjusted by means of a central spindle, carrying on its projecting end a metal disc furnished with suitable inclined pieces.

Poole, M. "An improvement in sculpturing surfaces of marble and stone," (a communication). This invention consists in rolling or rocking an engraved or embossed metallic surface in contact with a surface of marble or wood, sand or other suitable cutting material being interposed between.

Brant, J. C. "Improvements in laying rails, chairs, and sleepers for the permanent way of railways." This invention consists in the application of cork in various ways to the permanent way of railways; also in using longitudinal and transverse sleepers tied together so as to form a continuous line of way on a solid and equal bearing.

The following is amongst those for which provisional protection has been granted:—

François Coignet, of Rue Hauteville, Paris, France. "Certain improvements in the use and preparation of plastic materials or composition to be used as artificial stone, or as concrete or cement for building and other purposes."

AMERICAN PATENTS.

THE following are selected from lists of recent patents, reported in the Journal of the Franklin Institute of Pennsylvania:—

For an Improvement in Roofing Compositions: James West, Syracuse, N. Y.

Claim.—"The use of lime, in combination with the rubber, gutta percha, and shellac solutions."

For an Improved Mode of Hanging Window Sashes: J. W. Ross, Zanesville, O.

Claim.—"Attaching the straps to the sashes, said straps passing in reverse direction, around pulleys, on a shaft in the style of the casing, the pulley being attached permanently to the shaft, and the pulley placed loosely upon it, and the pulleys being connected and disconnected when desired, the pulley having a pulley attached to it, to which pulley an elastic band is attached, said band being also attached to the sash."

For a Mortising Machine: Loomis E. Payne and Orris Pier, Stowe, Vermont.

Claim.—"A double semi-circular mortise bit, or gauge, arranged so as to clear itself thoroughly in its action; and this, in combination with the double eccentric plate, to regulate the motion to and fro of said mortise bit."

For a Machine for Cutting Double Tenons: C. P. S. Wardwell, Lake Village, New Hampshire.

Claim.—"The combination and arrangement of the intermediate obliquely set or drunken saw, with the clearing or finishing true circular saw for operation together, and whereby the drunken saw not only serves to largely reduce the wood between the tenons, as required, for the completion of the tenons, but to form a wider kerf or pathway for the axle of the finishing saw to admit of the deep insertion of the latter into the wood, and of its operation as a clearer between the double tenons during the continuous progress or feed of the timbers."

Notices of Books.

VARIORUM.

"Lessons in General Knowledge" is an elementary reading-book, by Dr. R. J. Mann (Longman and Co. publishers), intended to serve as a familiar and attractive introduction to the principles of natural science. Special attention has been given to style as well as matter, and the whole is occasionally illustrated by engravings. This appears to be a very good book indeed of its kind, and suitable, not only for children, but for young persons generally, and for not a few who have got beyond juvenility.——Another pamphlet on "Sunday Trading in London, its Causes and its Remedies," has been published by Mr. Rivington, of Waterloo-place, an old advocate of this good cause. In the present effort "the case of the tradesmen" is briefly stated. "A London employer," as the author is, deserves to be heard on this subject.——Two very interesting shilling parts of Longman's "Travellers Library" have just been issued. They are titled, "Sketches of Nature in the Alps," and are translated from the German of Frederick Von Tschudi. The special subjects comprise of course both vegetable and animal as well as mineral existence in the Alps. The firs or pines are a prominent feature in Alpine scenery. The Wettertanne, or Weather-fir, is a very picturesque and well-known element in the landscape, towering upwards in a pyramidal form, and spreading forth its lower arms like umbrellas, made as if for shelter to the Alpine tourist. The Wettertanne grows not unfrequently to a height of 100 or 130 feet, and measures from 4 to 5 feet in diameter at 2 feet from the ground. It lives to a venerable age and grows very slowly. The staple growth of the Alps are the trees of the pine and fir species. The fir (*Fichte*) and red spruce fir (*Roththanne*) are the chief constituents of the regular forests in the northern and western parts. The larch grows in the lower portion of the Alpine zone, and the *Pinus Cembra* in the upper. The larch is the tree which yields the best turpentine of all the coniferæ.

Reading for the Million.—The recent sale of the copyrights of the well-known collection of works known as *Bentley's Standard Novels*, have afforded Messrs. Routledge an opportunity of carrying out their scheme for issuing the best productions of modern writers at a cheap rate. We go out of our way to mention it. The Bulwer novels, which have been, and are so deservedly popular, will be immediately followed by a succession of able fictions. For this purpose, the copyrights of the sea stories of Captain Marryat and J. F. Cooper have been secured, and those of some of the best works of Albert Smith, G. R. Gleig, Ingoldsby, Maxwell, Mrs. Gore, Lady Scott, and Thomas Hood. The sale, we learn, realised nearly 7,000*l.* and the works to which we have referred are the cream of the collection. The Bulwer Lytton speculation having been carried out with great spirit and gratifying results to public, publisher, and author, we are glad to hear of the extension of the scheme.

Miscellanea.

ARCHITECTURAL INSTITUTE OF SCOTLAND.—The eighth meeting for the session of this Institute was held in George-street Hall, on Monday night last—Mr. Kirk in the chair. The secretary read a paper by Mr. Thomson, of Banchory, on "The Egyptian Obelisks now in Rome," which traced the history of these monuments, and entered into details regarding particular obelisks.

NATIONAL PORTRAIT GALLERY.—Earl Stanhope's motion, "That a humble address be presented to her Majesty, that her Majesty would be graciously pleased to take into her Royal consideration, in connection with the site of the present National Gallery, the practicability and expediency of forming by degrees a gallery of original portraits, such portraits to consist as far as possible of those persons who are most honourably commemorated in British history as warriors or as statesmen, or in arts, in literature, or in science," was agreed to, the words "such portraits to consist as far as possible of the most eminent persons in British history," being subsituted for "those persons who are most honourably commemorated in British history."

INSTITUTION OF CIVIL ENGINEERS OF IRELAND.—The ordinary general meeting of this institution was held on the 12th ult. at their rooms, 41, Upper Sackville-street, Dublin, Mr. Richard Griffith, president, in the chair, when Mr. John Hill, county surveyor, read a paper "On the Maintenance of Macadamised Roads, as exemplified by his Management of the Central District of Roads in Ireland under the Commissioners of Public Works." The charge of the commissioners over the roads in question, and all of a similar class in Ireland, having ceased on the 1st July, 1854, Mr. Hill took occasion to bring forward, among other detail connected with the management pursued, statistical information of the cost of maintenance under that system during each year from 1843 to 1853 inclusive, and contrasted it with the rates at which the contracts had been since let, for five years, under the ordinary operation of the Grand Jury Laws, by which it appeared that an increase of expense had now taken place which varied from 20 to 75 per cent. while the condition of the roads had been seriously deteriorated. In reference to the general question of road maintenance, he attached the greatest importance to timely and energetic work in the early part of winter, and asserted the principle that the object in view should always be attained by measures of a precautionary rather than of a remedial nature. The same principles applied with even greater force to the roadways of greatest traffic, such as those in cities and large towns. A long discussion followed, in which the president and most of the members present took part; and amongst other matters referred to, the relative advantages of pavements and of Macadamised roads for the streets of cities received attention, very varying opinions being expressed. The meeting then adjourned.—*Saunders's Newsletter.*

GAS.—The Liverpool United Gas Company have declared their usual dividend of 5 per cent. for the *half*-year; and the directors have been empowered to borrow 31,400*l.* under the provisions of the Act. ——At the half-yearly meeting of the York Gas Company, a dividend of 6 per cent. free from income-tax, was declared; and the directors were empowered to expend from 8,000*l.* to 10,000*l.* in providing a new gasholder, the business of the company having of late greatly increased.——The town of Honley has been supplied with gasworks, and nearly all the houses are lighted but not the streets as yet.——The works of the Churwell Gas-light Company, which have cost nearly 1,500*l.* are now in full operation, and a dividend of 5 per cent. has been declared, leaving a handsome surplus to be carried over to the next account.

RAILWAY TO PORTSMOUTH DOCKYARD.—Government has at last granted a sum of 70,000*l.* for the construction of a railway, commencing at the terminus of the London and South-Western, and the South Coast, Railways, in Landport, and ending in Portsmouth Dockyard.

THE THAMES AND THE CROWN.—In the latter part of the article on "The Condition of the Thames," page 106, the authorised report of the discussion which you quote contains an attack on the Crown, which is not just. The land between high and low water round the British Islands is the property of the Crown, except in cases where a grant has been made of it, of which there are many instances. This right was confirmed by a decision of the twelve judges, some years since, in the case of the Hull and Selby Railway. The Corporation of London have not, as yet, been able to produce a grant of the land on the shores of the Thames, from any sovereign; so that in this case to which the reporter refers, the Crown really is supporting the rights of the people against the usurpation of the Corporation.

A CONSTANT READER.

THE RELATIONS BETWEEN MASTERS AND WORKMEN.—Mr. Mackinnon lately moved in the House of Commons, for the appointment of a select committee to consider the inconvenience now felt from the want of equitable tribunals by means of which any difference between masters and operatives might be satisfactorily adjusted; and also to ascertain whether the *conseils des prud'hommes* in France had answered the purpose for which they were established. He was not anxious for any particular form of tribunal, nor did he seek to give it power to fix maximum or minimum rates of wages: all he sought was the establishment of equitable tribunals, which should be able to reconcile masters and workmen, and to prevent the recurrence of so tremendous a misfortune as a strike. Sir G. Grey said he thought it desirable that tribunals of the kind suggested should be established, but such tribunals should not regulate wages. The motion was agreed to.

NEWGATE JAIL.—At a meeting of the Court of Aldermen of the City of London last week, Alderman Cubitt brought up the report of the committee on the state of Newgate Jail, and its improvement or removal. The report, after some preliminary remarks, in which it was stated that till some important alteration was made in the physical structure of the interior of the building, Newgate must continue to be a standing reproach to the City of London, proceeded to intimate that a plan was under consideration which would give 120 separate cells at a cost estimated by the City architect at 10,000*l.*; that they had in view another plan of a comprehensive nature for the entire demolition of the courts and of the jail, and the reconstruction of the courts and such a portion of the jail as might suffice for the custody of prisoners while trials were going on, the objects of this plan being to dispense with Newgate as a prison, except only as above stated. A plan had also been submitted to the committee for such additions to the prison at Holloway as would enable it to receive the prisoners now kept at Newgate. The cost of these combined operations, that is, the reconstruction of the Criminal Courts and a portion of Newgate, was estimated by the City architect at 87,000*l.* less the value of a piece of land at the Old Bailey set free, and estimated at 9,000*l.* In working out these plans, the City architect had so arranged as to permit the smaller one to form an integral part of the larger. The report, after some discussion, was received, and referred back to the committee to act therein as they should think fit.

THE "PATHOLOGY OF ENGLISH ART."—At the Liverpool Philomathic Society's, on Wednesday evening in last week, a lecture was delivered by Mr. J. T. Foard, on "The Pathology of English Art; its diseases,—chronic, epidemic, and hereditary." One of the chief pathological states of high art was described, according to the local *Journal*, as "an eruptive disease, recurrent like the measles or small-pox, attacking with fearful violence almost every painter in every stage of national history—its ravages being of the most painful kind." It made its first appearance in this country during the life of Sir Joshua Reynolds, and Sir Joshua himself was attacked by it at the first exhibition of the Royal Academy in 1769, where it broke out in the shape of "Lady Blake as Juno receiving the Cestus from Penus,"—"Miss Morris, as Hope, nursing Love," &c. &c. At present the symptoms assume in general a somewhat milder form, as in "Nymphs Bathing,"—"Nymphs Reclining,"—"Nymphs Surprised," &c. A description of one would serve for all. To convert "Nymphs Bathing" into the "Sirens," or "Venus and her Nymphs," would be merely a matter of repletion. "But if the Choice of Paris were required, the recipe would be as follows:—Take the same three figures: turn the green sea into green fields, the sea-weed into ditches, the shells into sheep, &c.; add an adolescent male figure nude; garnish with extra blue sky and a rocky foreground; serve. Repeat this *ad nauseam*, and you have modern English or nineteenth century classic art." The paper next referred to the "manufacturing" of pictures, which "impaired the function and paralysed the action of one-half of the body corporate of art." A denunciation of the Pre-Raffaellite school concluded the whole. A discussion ensued, and the thanks of the society were awarded to Mr. Foard.

VALUE OF LAND IN THE CITY.—The following tenders were received by the City Commissioners of Sewers, last week, for a plot of ground in Chancery-lane. Frontage, 38 feet; depth, 24 feet:—

	Per Annum.
Haynes and Eyre	£40
Palmer	70
Pursell	100
Marsh, for the Law Union Assurance	125
Reserved price	140

At which price it was taken by Mr. Marsh, making the price for freehold, at thirty-three years' purchase, 4,620*l.*

STOPPING TRAINS.—It would be a great desideratum in railway travelling if, with the stopping trains, some arrangement could be contrived by which the loss in speed in pulling up to stop, and the loss in speed in starting, could be reduced to a minimum; in other words, if the act of stopping a train should not cause much more loss of time than the mere delay for passengers to alight; and this is now the more necessary since there is such a large body of daily travellers on the metropolitan lines, who are both accommodated and incommoded by a frequent stoppage of trains, and where, from the distribution of passengers at different points, it is necessary that most trains should stop frequently. To a certain extent the arrangement to be proposed is adopted, namely, that of laying the line on an elevation whenever it approaches a station—that each line of rail should have a continuous rise for some distance on both sides of the station, and should arrive at an apex at the proper stopping point. It may be said that an arrangement of the kind would be very inconvenient for fast trains, and would cause delay; but since it is always a desideratum to ensure moderation of speed in passing a station, this is necessarily secured by such an arrangement as is proposed, and with the ordinary stopping trains. The pace is rapidly curtailed by the steep incline in stopping, while the start is accelerated by the descending incline, thereby attaining both the ends desired. To a certain extent this has been adopted, but not regularly, and not sufficiently to prove of general service. You can always detect its existence by the rapid and easy way in which you stop, and equally so start. We have only to wish to have it general, when the permanent way requires alteration, and also in new construction it is worthy of consideration.—H. C.

LONDON BRIDGE.—On reading Mr. Collinson's motion respecting the Southwark and London Bridge Improvements, it occurred to me how easy it would be to alter the present bridge to meet the demands of the increasing traffic, adding but little extra weight and at a trifling cost, compared with the advantages gained. I would remove the present footpath and parapets each side, and erect two rows of iron columns at a sufficient width to allow the heavy portion of traffic, and a foot-path for the drivers, say two feet wide, which would leave sufficient room for two other lines for carriages and the lighter portion of traffic each side of centre line of bridge, thus making six distinct lines of traffic instead of four, and by dividing the different ways by raising one course of stones three inches above the others would prevent confusion, by each entering its proper line. The above-mentioned columns should stand about twenty feet apart, to support the trussed girders longitudinally, which would carry an elevated platform for foot passengers, a sufficient height, say eighteen or twenty feet, to allow for the traffic underneath to be reached by four flights of steps from the present foot-paths, communicating with each other at the ends of the bridge, to allow persons to ascend either side, take their proper side in crossing, and descend the side they may require. The weight of stone removed would nearly equal the weight added, and bear part of the expense: one side could be done at a time, without causing much delay to the traffic, and if skilfully designed would make a useful, ornamental, and noble construction worthy of the name of an—ENGLISHMAN.

FORGING IRON.—Mr. W. Clay has recently patented a method of manufacturing forged iron so as to economize the metal. His claim is for making shafts or other articles, of wrought iron, by piling together suitable lengths, and the employment of a core of sand or charcoal dust, &c., as described.

DESTRUCTION OF BLACK-BEETLES.—Some fifteen years ago, I had the ill-luck to import into my house (I believe from Brighton) a sort of long-bodied beetles, which bred rapidly, and infested for years my kitchen, scullery, bakehouse, &c., and every now and then made their appearance in the better apartments; a nimble gentleman, of near an inch and half long, meeting one occasionally on the stairs or in the passages. I have heard them called "cock-roaches," but whether properly or not, I know not: at all events, they were a serious annoyance. A year or so ago, I saw advertised "Chase's Beetle Poison," at one shilling the box; and as I thought the trial worth making, I got my grocer to procure me four boxes. The contents of two of them I distributed, with an interval of a week or two, in the chief haunts of the beetles. The other two boxes I have still; but a beetle I have not seen now for many months, and I believe them to be totally destroyed. It is right to mention that four young chickens, which had access to the scullery when the poison was there, died, and were thought to have been killed by it; but dogs and cats took no harm—probably did not eat it. As this is a *bonâ fide* communication, intended solely for the benefit of others who may be similiarly annoyed, I inclose you my name and address, which you are at perfect liberty to give to any *bonâ fide* inquirer.—W.

ARCHITECT'S "CLERK."—Your correspondent who has deigned to notice my communication, and whose modesty would not allow him to be "guilty of the rudeness" of punning upon my remarks, must surely know that, though literally the appellation of "clerk" is applicable to a clergyman and a man of letters, yet in modern phraseology this sense of it is obsolete, except indeed a very few instances, such as law-deeds, &c. Who ever hears now-a-days of the use of the term in that sense? for, if so applied, the parson of the parish would be the "parish clerk," and the mayor of a town in the same sense would be the "town clerk!" Let us for a moment suppose this. 1. A clergyman is a clerk: by usage, the man who sits under him and says "Amen" is a clerk. 2. A man of learning and letters: a lawyer must be one; and his boy who copies his letters and runs errands is so designated. 3. One who writes for another, whom *Johnson* also calls a "secretary," and which is the present understood term for such a man. 4. Officers of various boards. Surely your correspondent must know that the various capacities of the last-mentioned qualify their positions, and we know at once by the term what they are—as the "town clerk," "clerk of the peace," "clerk of the Crown," or "clerk of the House of Commons," &c. &c. By these examples we see that the degrees of comparison, and, indeed, the etiquette of modern usage, would not sanction this multifarious term to be applied in its abstract sense; so we use other phrases better adapted to the understanding, and hence the general term "clerk," in its ordinary acceptation, is, "clerk, *s.* a secretary or bookkeeper" (Johnson). The distinguishing feature of this term of my thesis, from its misapplication, is so assimilated with the word "clerk" in its commonest sense; that, there the difficulty lies. Thus we say—an "architect's assistant," who, in no small degree, contributes to the fame of his employer, by his talent and ability, is by usage a clerk; so also is the man who keeps his accounts, and the boy who dusts the office; and, therefore, Mr. Brown or Mr. Jones, head-assistant, who, like myself, may have pretensions to a higher grade, has no word in this huge language of ours with its upwards of *twenty-six thousand* words, to distinguish him from the errand boy. If your correspondent's knowledge of the matter had been greater, he would have attempted, with less indignation, to give an answer to my original question definitely, as to "when the cognomen was first applied," and why? "to one who is neither Clerk of the Peace, Town Clerk, Clerk of the Crown, Clerk of the House of Commons," nor any of "the hundreds of other Clerks" who would look down with —— upon one who is

"*Only* AN ARCHITECT'S ASSISTANT."

TENDERS

For pulling down the old and rebuilding a new branch bank at Leighton Buzzard, Beds, for the London and County Banking Company. Mr. A. Parnell, architect. Quantities supplied:—

Myers	£2,830	15	0

ADVERTISEMENTS.

METROPOLIS LOCAL MANAGEMENT ACT SAINT LEONARD, SHOREDITCH, Middlesex.—The Vestrymen of the Parish of St. Leonard, Shoreditch, in the county of Middlesex, in pursuance of the Act of Parliament, 18 and 19 Vic. cap. 120, "For the better Local Management of the Metropolis," will meet in the School-room of the New Tabernacle, Old-street-road, in the said parish, on THURSDAY, the 20th day of MARCH, at SIX o'clock in the evening, to elect the undermentioned officers, viz.:—

A MEDICAL OFFICER of HEALTH, at a salary of 300l. per annum.

A CHIEF SURVEYOR, at a salary of 300l. per annum.

An ASSISTANT SURVEYOR, at a salary of 120l. per annum, to act under the orders of the Chief Surveyor.

TWO INSPECTORS of NUISANCES, at a salary of 100l. each per annum; and

A MESSENGER, at a salary of 1l. 5s. per week.

The above officers will be required to devote their whole time to the duties of their office, which will be as defined by the Act of Parliament, and from time to time by the orders of the Vestry, except the medical officer, who will be allowed private practice, but must hold no other public appointment in the parish. Candidates are required to send in their applications and testimonials addressed to the Vestry, at the Offices, 37, Hoxton-square, on or before WEDNESDAY, the 12th inst.; and they must also attend the Committee (personally) at the School room, adjoining the New Tabernacle, in Old-street-road, on THURSDAY, the 13th of MARCH, 1856, at ELEVEN o'clock in the morning. They will also be required to attend a special meeting of the Vestry, to be held at the School-room of the New Tabernacle, in Old-street-road, on WEDNESDAY, the 26th day of MARCH, 1856, at ELEVEN o'clock in the morning. The applications and testimonials of the candidates for the medical officer, will be forwarded to the General Board of Health for examination, and if the report from the Board of Health should not be received by the 26th inst. the election of such officer will be deferred, of which due notice will be given.—Any further particulars or information may be obtained by application to

Clerk pro tem. to the Vestry.

Offices, 37, Hoxton-square 6th March, 1856.

THE MERTHYR TYDFIL LOCAL BOARD of HEALTH are desirous of receiving applications for the appointment of SURVEYOR to the said Board. He will be required to give the whole of his time to the Board, receive plans for building, inspect and measure all work done by the Board and their contractors, make out the accounts, and perform the duties required by the Public Health Act. Salary, 150l. per annum.—Applications to be addressed to Mr. JAMES WARD RUSSELL, Clerk to the said Local Board, on or before SATURDAY, the 15th day of MARCH next.

Merthyr Tydfil, February 28, 1856.

VESTRY of ST. MARY, NEWINGTON, SURREY.—Notice is hereby given, that this Vestry will meet on WEDNESDAY, the 12th MARCH next, at SEVEN o'clock in the evening, at the Infant School-room, Queen's Head-row, Newington, to proceed to ELECT a ROAD FOREMAN, to act under and assist the Surveyor of Roads, at wages of 1l. 15s. per week. Applicants for the office must have a practical knowledge of the making and repair of roads and footpaths, and of paving; the qualities of stone and other materials; and must produce testimonials as to their character and efficiency, and testimonials must be sent to the undersigned on or before MONDAY, the 10th MARCH next; and the applicants must personally attend the Road and Paving Committee of the Vestry at SEVEN o'clock in the evening of that day, at the Vestry room of the parish church, Newington.—Dated 27th February, 1856.

H. and F. FLEETER, Clerks to the Vestry,
1, Crescent-row, Newington-butts.

WANTED, for a Builder and Contractor's establishment in Liverpool, a FOREMAN, to take the out-door department. No one need apply who is not fully competent to undertake such a situation.—Address, stating wages required and references as to character and ability, to BUILDER, care of Mr. H. Greenwood, 18, Canning-place, Liverpool.

TO PLUMBERS AND GLAZIERS.

WANTED, in a country town, a good PLUMBER and GLAZIER for a constancy.—Apply to WILDER and TANNER, Chelmsford, Essex.

TO ARCHITECTS' ASSISTANTS AND DRAUGHTSMEN.

WANTED, immediately, a good ARCHITECTURAL DRAUGHTSMAN, who is capable of taking off quantities, estimating and measuring off works, has a practical knowledge of business generally, writes a good hand, and is of steady habits. Applicants to state salary.—Apply to Mr JOHN GREEN, Architect, &c., Grey-street, Newcastle-on-Tyne.

Mr. GREEN also has a VACANCY for a respectable Youth as PUPIL.

TO BUILDERS' CLERKS.

WANTED, in a Builder and Contractor's Office, a CLERK, fully qualified for making finished and working drawings, taking out quantities, estimating, measuring up works, and the general routine of a builder's office, and practically acquainted with the building business.—Apply by letter, with full particulars, salary, &c. to A. X., office of "The Builder."

WANTED, a CLERK of WORKS.—Apply to G. H. STOKES, Esq. Solicitor, 18, New-street, Spring gardens.

WANTED, a CLERK of the WORKS, to Superintend the Restoration of a Church. Satisfactory references from architects will be required.—Apply to Mr. WILLIAM SLATER 4, Carlton chambers, Regent-street.

TO BUILDERS.

WANTED, a SITUATION, in a Builder's Office, by a Young Man, who is fully capable of taking out quantities, measuring up works, and the general routine of the office. References unexceptionable.—Address, S. S. 47, Essex-street, Strand.

TO WHARFINGERS AND OTHERS.

WANTED, by an intelligent and respectable Young Man, active and confidential EMPLOYMENT, who has a knowledge of bookkeeping, and of the Building and Wharfage businesses. Principals will meet with prompt attention by directing to A. B. Mr. D. White's, 3, Winchester-place, Pentonville-hill.

TO MASTER PAINTERS, BUILDERS, AND OTHERS.

WANTED, by a Young Man, aged 29, EMPLOYMENT as GRAINER, PAINTER, &c. or to superintend work. Has had first-rate experience. Specimens on hand. Wages moderate. References given.—Address, T. LLOYD, 28, Henry-street, Hampstead-road.

TO CARPENTERS AND BUILDERS.

WANTED, to APPRENTICE a strong, healthy Lad, for about TWO YEARS, where he will have an opportunity of improving himself in the practical part of the business, having followed the same about five years.—Address, J. KERRY, Southgate, Middlesex.

TO BUILDERS, CONTRACTORS, &c.

WANTED, a SITUATION, by the Advertiser, who is about to leave a firm of high standing, where he has been engaged in the country above eight years.—Address, T. HORNE, Office of "The Builder."

WANTED, by the Advertiser, a SITUATION as SHOP FOREMAN of JOINERS. Has filled a similar situation with one of the principal builders in London for the last twelve years; cause of leaving being the proprietor is retiring from business. Unexceptionable references for character and ability.—Address, A. R. Mr. Grimaldi's, Bell-lane, Spitalfields.

WANTED, by a Gentleman of experience, aged 37, a SITUATION in an Architect and Surveyor's Office, at the West End. Is a first-rate draughtsman, penman, and has been used to the routine of either office. Salary, he considers, per annum. References can be given.—Address, ALPHA, Office of "The Builder."

WANTED, by a Practical Man, who has been twenty-five years in business as a Carpenter and Joiner, EMPLOYMENT in a Builder's Office, or to superintend workmen and to make himself generally useful to his employer; or in a Timber-Merchant's establishment. Undeniable references to all his several character and security, if required. Address by post only to A. B. Mr. Tarver, Timber Merchant, &c. Bridge-wharf, Battersea, Surrey.

WANTED, by a Person of considerable experience in all branches connected with buildings, in town or country, a RE-ENGAGEMENT as BUILDER'S FOREMAN or CLERK of WORKS. Good reference as to ability, integrity, &c. can be given. Location no object.—Address, E. R. 3, France-street, Tottenham-court-road.

TO STONE AND RED WARE POTTERS, BRICK AND TILE MAKERS, AND OTHERS.

WANTED, by a thorough practical Man, a SITUATION, to superintend or take the work; can burn as well as make; well understands sanitary pipe making, both salt and other glazes, likewise the brick and tile and terra cotta work, in all its branches, having had some years' experience; is a good accountant, and has a good connection for the sale of stone and red ware, both in London and the country.—Apply to W. W. care of Mr. S. Bishop, 43, Mount-street, Lambeth.

TO ARCHITECTS.

WANTED, by a Gentleman, who has recently completed his articles in the office of a London architect of good standing, a SITUATION as CLERK, for six or twelve months, in a country office. Salary moderate.—Address, E. D. P. 34, Albert-street, Mornington-crescent.

TO ARCHITECTS AND SURVEYORS, OR BUILDERS.

WANTED, by a Young Man, aged 24, a SITUATION as CLERK, in either of the above offices; is a good draughtsman, well acquainted with the quality and prices of materials, measuring up work, and superintending workmen; also a good book-keeper. First-rate references.—Address, J. S. 6, Prospect-place, South-street, Greenwich.

TO CIVIL ENGINEERS, ARCHITECTS, SURVEYORS, &c.

A YOUNG GENTLEMAN, who has studied his profession practically and theoretically, wishes a RE-ENGAGEMENT, at home or abroad.—Address, SNIP, City News Rooms, 66, Cheapside.

TO MASTER BRICK AND TILE MAKERS.

WANTED, by the Advertiser, a SITUATION as FOREMAN, in the above line. Has a thorough knowledge of the close or Scotch kiln work in all its branches. Good testimonials.—Address, G. H. 4, Glengall-place, Millwall, Poplar, London.

TO ARCHITECTS AND SURVEYORS.

A YOUTH, who has been two and a half years in an architect and surveyor's office, OFFERS his SERVICES where a moderate remuneration would be given in return. Good testimonials as to morals and ability from previous employers.—Address, A. B. Post-office, Worcester.

WANTED, a SITUATION as CLERK, or FOREMAN of WORKS or WHARF; or in any other capacity where perseverance and integrity are essential. First-rate references.—Letters, post-paid, to W. R. 14, Aske-terrace, Hoxton.

TO ENGINEERS, CONTRACTORS, AND BUILDERS.

WANTED, by a respectable Young Man (the son of a builder), an ENGAGEMENT as CLERK of WORKS, BUILDER'S FOREMAN, or in any similar capacity. References unexceptionable.—Address, P. P. No. 10, Little Clarendon-street, Somer-town.

CARPENTER AND HOUSE JOINER ON A GENTLEMAN'S ESTATE.

WANTED, a SITUATION as above, by a young Man from the country. He can be well recommended.—Apply to Mr. PEARCEY, Bookseller, 3, Church-street, Rotherhithe, Surrey.

WANTED, by a thorough practical PLUMBER, who understands iron main-pipe laying, casting zinc working, &c. a SITUATION as FOREMAN, or to MANAGE a BUSINESS; can keep the accounts. Satisfactory references.—Address, PLUMBER, 21, Pope-street, City, London.

TO ENGINEERS, &c.

WANTED, by a Young Man, aged 21, acquainted with mechanical drawing, a SITUATION as IMPROVER in the above trade. A small salary only required.—Address, A. B. care of Mr. Henry, Tailor, 15, Cobourg-street, Clerkenwell.

TO BUILDERS, CARPENTERS, &c.

WANTED, by a Young Man of 20, EMPLOYMENT as IMPROVER, at the bench, or otherwise. Understands taking out quantities, measuring, plain drawing, and book-keeping. Office and bench work combined, if required. With opportunities for improvement, moderate wages accepted. Town or country. In-doors preferred.—Address, SIGMA, Post-office, Tottenham.

TO ARCHITECTS AND SURVEYORS, BUILDERS, TIMBER MERCHANTS, &c.

WANTED, a SITUATION as CLERK, to either of the above, by a Young Man, aged 25, being well acquainted with the general routine of an Architect's or Builder's office; also measuring up work and keeping accounts, superintending workmen, if required, and a good plain draughtsman. Good references can be given.—Address, R. M. Post-office, 118, Edgware-road, Paddington.

TO ARCHITECTS AND BUILDERS.

WANTED, a SITUATION as CLERK of WORKS, SHOP, or FOREMAN of WORKS, by an experienced practical man, aged 43, with testimonials for services of years, and excellent references.—Address, J. E. D. 31, Lower Marsh, Lambeth.

TRAVELLER WANTED.—TIMBER TRADE.—Any person having a thorough knowledge of his business, of industrious habits, and if any connection at command the better, will be liberally treated with. Letters can be addressed in the first instance, stating age, previous employment, &c. to X. Y. Z. Messrs. Reynolds and Falconer, 15, Old Broad-street, City.

TO ARCHITECTS.

THE Advertiser, who is a first-rate Draughtsman, and has a thorough knowledge of detail and construction, is open to an ENGAGEMENT.—Address, G. G. No. 39, Michaelis-place, Brompton.

TO BUILDERS AND SURVEYORS.

THE Advertiser is OPEN to a SITUATION in Town or Country, as WALKING FOREMAN, or ASSISTANT in the Office. Is well acquainted with the duties of an office, and can prepare fair and working drawings. If a place of trust be required, security can be given.—Address, J. C. care of Mr. Harman, the Square, High-street, Winchester.

THE FUNNEL FIRE-LIGHTER.—To OWNERS of MACHINERY, FIREWOOD DEALERS, and OTHERS.—WANTED, a person to MANUFACTURE the "FUNNEL FIRE LIGHTER" for the Patentee. The article is made of firewood, and the chief operations to be performed are sawing, chopping, piercing, and threading. Securing a thorough draft of air through the mass of fuel to be lighted, with a sufficient lateral expansion of flame, it is an unfailing fire lighter, needing no bellows and requiring no attention after being lighted. It also possesses the valuable property of concentrating the flame which is projected beyond the stove, and thereby making it useful for cookery, &c. the moment the article is lighted. It is also especially safe for children to use, as it throws out no sparks in front; and being cleanly to handle, and even elegant to look upon, and capable of being cheaply produced, it promises to light a good proportion of the half million of fires daily made in London. The patentee is willing to contract with a manufacturer for such a supply of the article as he may need for the consumption of London, and all other places to which he may send the article from London.—Further particulars, specimens of the article, and the method of manufacture, will be shown to bonâ fide inquirers by Mr. W. H. NEWMAN, 45, Cannon-street-road, Commercial-road East.

TO ARCHITECTS

THE Advertiser, who has had fifteen years' experience, is desirous of a RE-ENGAGEMENT, in a London Office. Is well acquainted with colouring, perspective, mediæval, and Italian detail, and is considered a good draughtsman. References good. Salary moderate.—Address, Q. E. D. 3, Bloomfield-terrace, Pimlico.

TO ARCHITECTS AND SURVEYORS.

THE Advertiser is desirous of a SITUATION in either of the above offices; is a good plain and perspective draughtsman, and accustomed to assist generally in taking out quantities.—Address, to the care of R. M. 31, Winsor-terrace, City-road.

TO WAREHOUSEMEN, WHARFINGERS, AND OTHERS.

THE Advertiser wishes for a SITUATION in any firm, as FOREMAN, or CLERK, to take orders, and attend to the delivery of goods, or any situation where trust is required. Can write a good hand, and keep accounts. Can have a character for honesty, sobriety, and attention to business.—A letter addressed to P. S. No. 4, King's terrace, Hammersmith, will be immediately attended to.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

THE Advertiser, aged 33, is desirous of an ENGAGEMENT. Has had considerable experience in preparing working and finished drawings, estimating, measuring, and superintending works, and can undertake the routine generally.—Address, J. K. Mr. Webster's, 8, Sandwich-street, Brunswick-square.

TO BUILDERS.

THE Advertiser, who is about leaving his situation, wishes for an ENGAGEMENT as SHOP FOREMAN, and well understands setting out boards, and is capable of undertaking any job. Good references given as to ability and sobriety.—Address, J. H. No. 8, York-street, Hackney-road.

PLUMBING.—EMPLOYMENT Wanted, by a respectable experienced Man. Does not profess painting and glazing, but willing to make himself useful. Respectable reference.—Address, W. T. No. 4, Warwick-row, Pimlico.

DISCHARGE of DUTIES FAITHFULLY. Any Builder or Contractor requiring a persevering Young Man of thorough business habits, as TIMEKEEPER or GENERAL FOREMAN, and who understands the executing and measuring of builders' work, will please address EBENEZER, 76, Hatton-garden.

TO ARCHITECTS.

AN experienced CLERK of WORKS is now at liberty for ENGAGEMENT with any gentleman in the profession.—Address, A. B. care of Mr. D. Carter, No. 1, Providence-place Clarence-road, Kentish town, London.

A YOUTH (16 years old), who can map and copy drawings, put plans on leases, write a good hand, and is accustomed to office business generally, wishes for a SITUATION. Salary, 12s. a week.—Address, prepaid, J. COOPER, Post-office, Mount-street, Lambeth.

TO ENGINEERS AND IRON-FOUNDERS.

A THOROUGH practical experienced MOULDER in loam and sand castings of every description, wishes an ENGAGEMENT as FOREMAN. He is a good accountant, and quite capable of conducting a foundry on the most approved and economical principles. Good reference can be given. Would have no object on to piecework.—Address, MOULDER, Office of "The Builder."

TO BUILDERS AND OTHERS.

A YOUNG MAN, 24 years of age, a complete Builder's Clerk, is open to a RE-ENGAGEMENT. He was brought up to the trade, and has had six years' experience in one of the largest and first established businesses in London. Address, Mr. SPENCER, Mr. Beadon, Stationer, Worcester-street, Wolverhampton.

TO ARCHITECTS, &c.

AN ASSISTANT, accustomed to prepare finished working and detail drawings, and set out building works, wishes for an ENGAGEMENT, in town, either temporary or permanent.—Address, F. W. No. 8, Farringdon-street.

TO ARCHITECTS, SURVEYORS, &c.

A YOUNG MAN wishes for a RE-ENGAGEMENT in either of the above professional offices. Can draw out plans, elevations, and sections; has a slight knowledge of construction. Is a good penman, and a fair hand at accounts. Address, C. H. Office of "The Builder."

TO BUILDERS, &c.

AN experienced CLERK wishes EMPLOYMENT in an OFFICE, to make finished or working plans, take out quantities, or make estimates; is well acquainted with the general routine of office duties. Salary moderate. Good references.—Address, A. Y. No. 5, Gloucester-street, Regent's-park.

A GOOD THREE-BRANCH HAND wants a constant SITUATION. Understands general repairs in all its branches. First-rate references as to ability, &c.—Address, W. B. S. 33, Victoria-terrace, High-street, St. John's-wood.

TO ENGINEERS AND ARCHITECTS.

A YOUNG MAN, who has had much experience in PLAN DRAWING, is open to an ENGAGEMENT. Has a knowledge of French. For information as to ability and character, apply to F. H. ROUS, Wigton, Cumberland.

TO ARCHITECTS.

A GOOD DRAUGHTSMAN, competent to make working, finished, and coloured perspective drawings, desires a RE-ENGAGEMENT, at a moderate salary.—Address, W. W. Office of "The Builder."

AN ARCHITECTURAL DRAUGHTSMAN is desirous of a RE-ENGAGEMENT in Town accustomed to the getting out of perspective, finished, working, and detail drawings. Salary moderate. Address, A. B. 9, Elizabeth-street South, Pimlico.

TO ARCHITECTS, &c

A YOUNG MAN, with three years' experience in the office of an Architect, Builder, and Surveyor, in a cathedral town, is desirous of ENGAGING in a similar SITUATION. Can produce satisfactory testimonials of character, with specimens of drawing and writing.—Address, F. S. office of "The Builder."

TO ARCHITECTS.

AN ARCHITECTURAL COLOURIST of considerable experience, ENGAGES to COLOUR COMPETITION and OTHER DRAWINGS on reasonable terms. Perspective and other drawings put in outline. Lithographs, &c. &c. Drawings coloured, and transmitted to the country. Specimens produced.—Address, B. C. Mrs. Plummer's Library, Theobald's-road, Bedford-row.

A FIRST-RATE and expeditious PLAN DRAUGHTSMAN, ORNAMENTAL WRITER, and COLOURIST, is open to an ENGAGEMENT to make finished plans of town improvements, estates, railways, docks, mines, canals, roads, and projects of every kind. Has been employed by the most eminent engineers, architects, surveyors, and the Government for 18 years.—Apply by letter to R. THEODORE, 4, Trafalgar-square.

A YOUNG MAN, aged 20, from the country, who has had four years' practice at the carpentering and joinery, wishes to PLACE HIMSELF under a MASTER BUILDER for one or two years, for further INSTRUCTIONS. Can give the highest references.—Apply by letter to J. HURLEY, Beaumont Lodge, near Old Windsor, Berks.

AS CARPENTER.—WANTED, by the Advertiser, aged 40, a SITUATION, as CARPENTER and JOINER, on a gentleman's estate, or in any large establishment.—Can have sixteen years' unexceptionable character.—Address, post-paid, J. W. 5, Belvedere-road, Lambeth.

PARTNERSHIP.—Capital required, about 2,000l.—Any party having this amount at command, and who is either a good draughtsman, &c. or practical builder, may join the advertiser, carrying on business in the Midland Counties, wherein a certain independence can be made. Testimonials as to character and general capabilities, will be required.—Address, by letter, to X. Y. Z., Bolt-court, Fleet-street, London.

TO the ARCHITECTS of ENGLAND and SCOTLAND.—PARTNERSHIP.—A Married Gentleman, aged 30, who for 10 years has laboriously applied himself to the study of architecture in connexion with engineering and works, and has travelled much abroad, as well as all over England and Wales, and has acquired such facility for designs and rapid means of expression therein, by actual and practical drawings, as never to have failed in success, is desirous of JOINING his SERVICES to an architect whose practice may be increasing, as to repair a Partner to develope it. An enthusiastic admiration of his profession, with great application to the same, would be brought to bear on the services here offered. A library of architectural works, a large houseful of rich antique furniture, and a collection of photographs and pictures, would be brought to assist in retaining his position as that of a gentleman. Architects replying, to state terms and what works generally comprise their practice. Address, A. B. Z. Wade's Library, 13, High-street, Kensington

GEO. H. PINCKARD, Resident Secretary.

SIXTH BONUS.

UNION ASSURANCE SOCIETY.—(FIRE LIFE ANNUITIES)

Instituted in the reign of Queen Anne, A.D. 1714.
Cornhill, and 70, Baker-street, London.
Chairman—J. Remington Mills, esq
Deputy-Chairman—Henry Hulbert Norman, esq

James Bentley, esq	John Paynter, esq.
Thomas Bradley, esq	John Rogers, esq.
Thornhill Britten, esq.	Henry Rutt, esq.
Nicholas Charrington, esq.	George Spencer Smith, esq.
S. Preston Child, esq.	Richd Hor-man Solly, esq.
William Gilpin, esq.	W. Foster White, esq.
Thomas Mills, esq. M.P.	Samuel Wilson, esq. Ald.
John Morley, esq.	Stephen Wilson, esq.

THE LIFE BONUS of the year 1856, of four-fifths of the profits of the LIFE DEPARTMENT, has been just declared, and (with the exception of a reserve of nearly 20,000l. to accumulate towards the next Bonus of 1861) is payable upon and with the sum insured, being at the rate of 10l. 10s. per cent for the last seven years, on Policies effected in Great Britain upon the Profit System.

THIS BONUS MAY BE APPLIED EITHER

By having the annual premium reduced for the next seven years, which will in many cases extinguish the same for that period;

Or by adding the amount to the sum insured;

Or the value thereof may be received immediately in money.

The Directors beg to state that, by a recent change in the regulations of this Society, the assured realize the advantages of MUTUAL OFFICES by sharing the entire profits less one-fifth as a small compensation for the necessary guarantee), and are free from the liability incurred by the members of such Societies.

The accumulated invested capital now amounts to upwards of ONE MILLION sterling.

THOMAS LEWIS, } Joint Secretaries.
WM. B. LEWIS, }

REMOVED FROM CRITCHILL-PLACE, NEW NORTH-ROAD, HOXTON.
BRICK MOULDS (improved), Steel-faced Stocks and Plates, with Screw Stock Pegs, used four seasons. Various sizes kept on hand. References where in use. Brick MOULD Work and Implements.—J. LEACH, Millwright and Engineer, 9, St. Peter's-square, Hackney-road, London.

THE PATENT BRICK-MACHINE COMPANY invite orders for their IMPROVED MACHINES, the only ones that manufacture solid bricks equal to hand-made, will shortly be at work in a field near London, accessible by railway, where it may now be seen with bricks of last season.
H. C. MOUNT, Secretary.
37, King William-street, City, February 1, 1856.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boys to remove the bricks. For a plate and description, see "Practical Mechanic's Journal," for January 1st, 1856.—Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions in the neighbourhood of London, at 7d. per foot, above 100 feet, 6d.—Office, 1, Adelaide place, London-bridge.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 1, Adelaide-place, London-bridge. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and removes all drip. It merits the attention of the landlord, the agriculturist, the owner of home property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Kelvetoft, near Rugby; or in London, Gloucester, or Bridgewater.
Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade terms, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 881, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Covings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had, in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

WARNER'S PATENT VIBRATING STANDARD PUMPS.—PATENT CAST IRON PUMPS, for the use of farms, cottages, manure-tanks, and wells of a depth not exceeding 30 feet.

Diameter of Barrel.	Length of Barrel.		£ s. d.
2½ in. short	1 ft. 7 in.	Fitted for lead, gutta percha or cast iron pipe	1 10 0
2½ „ long	3 3		1 14 0
3 „ ditto	3 6		2 8 0
3½ „ ditto	3 6	flanged pipe, as required	2 12 0
4 „ ditto	3 6		3 3 0
2½ short, with 15 feet of lead pipe attached, ready for fixing			2 14 0
2½ in. long ditto ditto			2 16 0

The above Pump being very convenient for fixing in situations where there is not much space, for the supply of coppers and sinks in washhouses with soft water from underground tanks, or in hot forcing, and plant houses; they may be fixed, when desired, under the stage. Any ironmonger [illegible] Ironmongers or Plumbers in the country, at the above prices, or of the Patentees and Manufacturers, JOHN WARNER and SONS, No. 8, Crescent, Jewin street, London.—Every description of Machinery for Raising Water, by means of wheels, rams, deep well pumps, &c. Also, Fire and Garden Engines, &c. &c. Engravings sent on application.

R. RICHARDS and CO. PUMP MANUFACTURERS and ENGINEERS

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

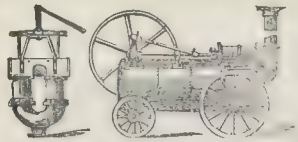
Ditto .... 4s. per doz. galvanized

Upper Ground-street, Blackfriars Bridge, Surrey Side.

B. FOWLER & CO.'S PORTABLE PUMPS,

3-inch to 9-inch Barrels.

Plain or Sliding Telescope Suction,

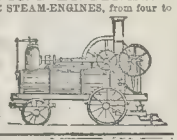


ON HIRE.

SINGLE AND DOUBLE PUMPS, all sizes, to any depth, for Hand or Steam Power.

Patent Double-action and General Pump-makers, Builders' Smiths, &c.

WHITEFRIARS-STREET, Fleet-street.



PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground street, Blackfriars-bridge (Surrey Side).

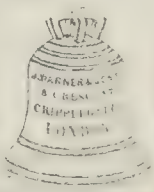
PUMPING and WINDING ENGINE.—TO BE LET on HIRE, or for SALE, a nearly new strong and simple PUMPING and WINDING STEAM ENGINE, of 10-horse power, by Medwin and Hall, with a pair of 10-inch pumps and all the driving gear complete. The contractor for whom it was fitted up will make a considerable sacrifice on the cost price, or let the whole on hire. Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, 62, Blackfriars-road.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS, Engineers and Contractors, John's-place, Holland street, Southwark, London.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.



J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has been [illegible] accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, single or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers and pegged on a new system which gives superior tone and facility for ringing.

GREAT REDUCTION IN GLAZED STONEWARE PIPES.

STEPHEN GREEN,

IMPERIAL POTTERIES, LAMBETH.

S. G. wishes to call attention to his WHOLE and HALF-SOCKET PIPES, made on the principle of PILBROW'S IMPROVED REBATED SOCKET-END, which fully secures a joint free from obstructions, and meets the demand for removing Pipes at any point.

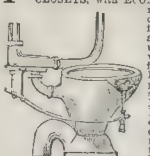
5s. 6d. each; if fitted with PATENT AIR-TIGHT VALVES, 1s. 6d. each extra.

Also to his IMPROVED REGISTERED CLOSET-PAN, with an impervious White Glaze inside, and formed to insure a Flush of Water over the entire Internal Surface. Made with or without STEPHEN GREEN'S PATENT AIR-TIGHT VALVE on the top of the Trap.

N.B. Prospectuses, with Prices and Terms, forwarded post-free, as also Prospectuses of STEPHEN GREEN'S PATENT SELF-ACTING FLUSHING CLOSET, complete, with Seat and Riser, &c.

MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c.; also FIRE BRICKS, Vitrified Blue Bricks as used by her Majesty's Commissioners of Sewers, White Fire Clay, Facing Bricks, &c., &c. Agents,—CHARLES RICHARDSON, No. 6, South Wharf, Paddington, London.

LYTCHETT POTTERY.—For SALE by PRIVATE CONTRACT, the LEASE and PLANT of the above Premises. The leasehold consists of about fourteen acres of land and a good cottage. The land contains a large quantity of very superior clay for pottery and fire-goods. The drain-pipes made from the clay are equal, if not superior, to any yet in the market; and the fire-goods will bear comparison with any yet made. The plant comprises three pottery kilns and two brick kilns, with pipe machines, pug-mills, and all other necessary apparatus. Lytchett Pottery is 4½ miles from the South-Western Railway, and 3 miles from the port of Poole.—For further particulars, and to view, apply to H. F. FISHER, Blandford.



PATENT DRAIN-PIPES, UNGLAZED, manufactured by ARTHUR C. FRANCIS and CO., Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine Elms, London, and at all their Wharfs.

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture, and it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of the basin may be seen, fixed upon the Premises of the Patentee, W. PATTEN, 52, Old Fish-street, near St. Paul's, London. Price for Closet and Apparatus complete, from 35s. and perfect action guaranteed.

GREAT REDUCTION in the PRICE of STONEWARE POTTERY from this date.

VICTORIA POTTERY LEIGH, near SOUTHEND; London Establishment, Falcon Wharf, Broadway, DAVID MONTAGUE, Manufacturer of every article of Lambeth POTTERY, having now further reduced the prices, begs to offer to Consumers and others, STONEWARE PIPES &c. &c. on the most advantageous terms. The new lists of prices will be forwarded on application as above. Feb. 11, 1856.

TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.

FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

TO WATER-CLOSET MAKERS.

WANTED, for Workmen's Cottages, FIFTY CLOSETS of the simplest principle and strongest construction.—Full particulars, with prices, to be sent to Mr. WALTER SCOTT, Architect, Liverpool.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

CLOSET BASINS, WHITE and BLUE URINALS, &c.

MANUFACTORY—MILLWALL.

DEPOT:

ARTHUR-STREET, NEW OXFORD-STREET.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country; an extensive assortment of specimens and patterns commencing at 1s. per foot super. together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

SALES BY AUCTION.

TO LAND and BUILDING SOCIETIES and OTHERS.—Votes for the County of Kent—Eligible Freehold Building Land, finely wooded, near to the entrance-gates of the Royal Arsenal, Woolwich.

MESSRS. CHURCH and SON are favoured with instructions to OFFER FOR SALE, by PUBLIC AUCTION, at the TOWN HALL, Woolwich, on THURSDAY, MARCH 13, 1856, at THREE for FOUR o'clock in the afternoon, SEVENTY-SEVEN PLOTS of Valuable FREEHOLD BUILDING LAND, land-tax redeemed, most eligibly situate on the high road, Plumstead, within five minutes' walk of the lower entrance-gates of the Royal Arsenal, and immediately adjoining the level crossing of the North-Kent Railway. This land offers advantages to large and small capitalists rarely to be met with. It forms part of the Griffin farm and gardens, is in a high state of cultivation, and is planted with luxuriant fruit trees. Each lot will have a frontage on an excellent new road, which it is proposed to extend to Plumstead-common, as a direct communication from Plumstead road, and will entitle the purchaser to a vote for the county of Kent. Plans, with particulars and conditions of sale, may be had on application to Mr. H. Davis, Solicitor, Rectory-place, Woolwich; at Garraway's Coffee House, Change-alley, Cornhill, London; and of the Auctioneers, William street, Woolwich.

ESSEX.

MESSRS. BEADEL and SONS are instructed to SELL by AUCTION, at the MART, on TUESDAY, MARCH 25, EIGHT brick-built and tiled COTTAGES, situate on Chadwell-hill, in close proximity to the high road from London to Romford let at rents amounting to £26 per annum; the beneficial interest arising from the House and Shop, and Premises, known as No. 3, High-street, Whitechapel, held from the Mercers' Company at 50l. per annum, and let to a most respectable tenant at 90l. per annum, a Policy of Assurance in the Equitable Office, for the sum of 737l. 10s. effected in the year 1821, upon the life of a party aged sixty.—Particulars and conditions of sale may be had of Messrs. Dawson and Brannan, Solicitors, 18, Basinghall-street; at the Auction Mart; and of Messrs. Beadel and Sons, 25, Gresham-street

ESSEX (and MIDDLESEX.—Paulatim Lodge, Dagenham. Valuable Detached Enclosure of Arable Land, and Five Houses in the Baronage Road Clerkenwell

MESSRS. BEADEL and SONS have received instructions to SELL, by AUCTION, at the MART, London, on TUESDAY, MARCH 25, at TWELVE, a very desirable VILLA RESIDENCE, known as Paulatim Lodge, with conservatory, excellent out-buildings, and tastefully laid out grounds, together with a small pasture adjoining, pleasantly situate on Chadwell-heath, within three miles of the village of Dagenham, two miles from Romford, and three from Ilford, at both of which are stations on the Eastern Counties Railway; a valuable detached enclosure of productive Arable Land, known as Mill Field, containing 3a. 3r. 8p. in the occupation of Mr. Thomas Wane, at 12l. per annum; also, a desirable Leasehold Property, comprising five houses in Oldham-gardens, Bagnigge-wells-road, Clerkenwell, let to respectable tenants at rents amounting to 94l. 10s. per annum. Possession of the residence can be had upon completion of the purchase.—Particulars and conditions may be obtained of Messrs. Dawson and Brannan, Solicitors, 18, Basinghall-street; at the Auction Mart; and of Messrs Beadel and Sons, 25, Gresham-street

Sixth Sale of the Surplus Property belonging to the North London Railway Company, with Votes for the County of Middlesex

MESSRS. BEADEL and SONS have received instructions from the Directors of the above Company to SELL by AUCTION, at the MART, on TUESDAY, MARCH 11th, at TWELVE o'clock, in 24 Lots, the 32nd Portion of the valuable FREEHOLD SURPLUS PROPERTY adjoining the Railway, Camden-town, comprising several freehold Houses, let at rents amounting to 280l. per annum; also well-secured ground-rents arising from houses in Brecknock-place, Great and Little Randall-streets, Grange-street, and Frederic-place. Also Sheppard House, Homerton, and a plot of valuable leasehold building land in Palace-road, Tottenham. Particulars may be obtained of Messrs. Tyrrell and Green, Solicitors, Guildhall-yard, of Messrs. Kendall and Bassett, Cornwall-crescent, Camden-town; at the Auction Mart; and of Messrs. Beadel and Sons, 25, Gresham-street.

Valuable Building Materials of Aberdeen Cottage, Balham, Surrey.

MESSRS. NORTON, HOGGART, and TRIST have received instructions from the Crystal Palace Railway Company to offer for SALE, on the PREMISES, on TUESDAY, MARCH 11, TWELVE, with all the slightest reserve, the valuable BUILDING MATERIAL, of a spacious residence, offices, &c. situate at Balham, within a few doors of Balham-hill Chapel, with walnut and deal doors; consisting of good sound brick-work, slated roofs, flooring boards, joists, girders, glazed sashes, panelled doors, marble chimney pieces, lead flats and cisterns, copper hips, ridges, pipes, pumps, and the whole of the valuable fixtures, and a variety of useful materials. A more detailed advertisement will appear early next week. ROYAL INSTITUTE of BRITISH ARCHITECTS

Incorporated 7th William IV.

16, Grosvenor-street, Grosvenor square, London, Feb. 1856.

HER Majesty having been pleased to grant her gracious permission that the ROYAL MEDAL be conferred on such distinguished Architect or man of Science, of any country, as may have designed or executed any building of high merit, or produced a work tending to promote or facilitate the knowledge of Architecture, or the various branches of Science connected therewith, the Council of this Institute will proceed in January, 1857, to take into consideration the appropriation of the Royal Medal.

Gentlemen desiring to compete for the SILVER MEDALS of the Institute, and the SOANE MEDALLION, with its travelling stipend, to be awarded for Designs, Illustrations, and Designs, may obtain the necessary information on application to the Honorary Secretaries, by letter, prepaid, at their above address.

ROYAL ACADEMY of ARTS, Trafalgar-square.

NOTICE to ARTISTS.—All Works of Painting, Sculpture, Architecture, or Engraving, intended for the ensuing EXHIBITION at the ROYAL ACADEMY, must be sent in on MONDAY, the 7th, or TUESDAY, the 8th of APRIL next, after which time no Work can possibly be received, nor can any Works be received which have already been publicly exhibited.

FRAMES.—All Pictures and Drawings must be in gilt frames. All Paintings under glass, and Drawings with wide margins are inadmissible. Excessive breadth in frames as well as projecting mouldings may prevent Pictures or Drawings the situation they otherwise merit. The other regulations necessary to be observed may be obtained at the Royal Academy.

Every possible care will be taken of Works sent for exhibition, but the Royal Academy will not hold itself accountable in any case of injury or loss, nor can it undertake to pay the carriage of any package.

The prices of Works to be disposed of may be communicated to the Secretary.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.

Head-Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful art-education, to develope its relation to the requirements of trade and manufacture, and its application to the common uses of life. Special courses are arranged in order to qualify Schoolmasters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects:—Free-hand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Mou ding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and Ornament, Flowers, objects of Still-life, &c., the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of Painting and Enamel Painting, Drawing and Engraving on Wood, and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees 4l. per session, or part of the session. For Evening Classes only, 2l. per session.

The Class for Practical Geometry and Perspective, or that for Modelling and Casting, may be attended separately on payment of 1l. per session.

Students have full access to the valuable collections of the Museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 27, Gower-street, Bedford-square. Superintendent, Mrs. M'Ian. Fees 4l. per session,—Advanced Class, 2l. and 1l.; Elementary Class, 1l. Evening Class, 10s.

Further information may be obtained on application at the Office of the Head Master, Marlborough House, Pall-mall, London.

COMPETITIONS.

TO ARCHITECTS.

MIDDLESEX INDUSTRIAL SCHOOL.—The Committee of Visitors appointed under an Act of the 17th and 18th Vic. cap. clxix. to provide an Industrial School for the Juvenile Offenders of the County of Middlesex, invite Architects and Others, by PUBLIC COMPETITION, to furnish PLANS and ESTIMATES for such building, to be forwarded, sealed up, and addressed to the Chairman of the said Committee, at the Sessions-House, Clerkenwell, on or before SATURDAY, the 26th day of APRIL, 1856. Each set of plans is to be marked with a motto or device, and the name of the author is not to appear, but to be put in a separate sealed letter, bearing on the outside a corresponding motto or device. A premium of 10l. will be paid for the plan which shall be considered the best, 7l. 7s. for the next, and 5l. for the third. Particulars as to the site, with a printed copy of instructions, and the conditions on which the premiums are offered, may be had upon application to me, at the Sessions House, any day between the hours of ELEVEN and FIVE o'clock.—Dated this 6th March, 1856.

CHARLES WRIGHT, Clerk to the Visitors.

GRANTHAM BURIAL BOARD.—EXTENSION of TIME for PLANS, &c.—The period for sending in Plans for Chapels, Lodge, and Entrance Gates, is EXTENDED to SATURDAY, 22nd MARCH. Plans are also required for PLANTING the GROUND and LAYING OUT the ROADS and WALKS therein. Two-thirds as consecrated, one-third unconsecrated, to be sent in by the same time, for which an additional premium of 5l. is offered. The ground is an oblong square of 220 yards by 132 yards. Entrance west. By order of the Board,

ROBT. HY. JOHNSTON, Clerk.

Grantham, February 20th, 1856.

GARSTON, near LIVERPOOL.—To ENGINEERS, SURVEYORS, &c.—The Survey for the District of Garston, to which the Public Health Act, 1848, is applied, being now ready, the Local Board of Health for that district are desirous of obtaining PLANS, SPECIFICATIONS, and ESTIMATES, for a system of SEWERAGE for effectually draining the district. Premiums of 70l. and 30l. respectively will be given to the Authors of the Two Plans, &c. &c. as approved of, which Plans, &c. &c. will become the property of the Board. The specification must contain all information regarding materials, &c. necessary to practically working of the drainage, and must include, so far as practicable, a scheme for preserving the sewage matter for agricultural or other purposes. Mr. GOTTO'S Plans of the Parish, on the sale are erroneous by the General Board of Health, are in the custody of the Surveyor, Mr. JAMES STANDING, and may be inspected at his house, Mayfield-road, Aigburth, on application to him. But inasmuch as lithographed copies of the general plan, on a scale of two feet to a mile, may be had from the Surveyor price 10s., no trachings will be allowed to be taken from the original plans. Four plans, at least, from as many different hands for competitors, must be sent in, otherwise the premiums will not be awarded.—The plans, specifications, &c. signed with a motto or device, and accompanied by a letter marked with a similar motto or device, enclosing the name and address of the Author, must be sent (carriage free) to the Office of Mr. J. B. LLOYD, Solicitor, 8, Exchange alley, Liverpool, on or before the 15th day of MAY next.

Dated the 5th day of March, 1856.

TO ARCHITECTS, BUILDERS, and OTHERS.—PREMIUM of 20l. for PLANS of OFFICES.—The Directors of the Manchester, Sheffield, and Lincolnshire Railway Company offer a PREMIUM of 20l. for the best PLANS and SPECIFICATIONS for a STACK of OFFICES, to be erected near their docks, at Great Grimsby. The proposed site has a frontage of 100 feet to the Cleethorpe's road, and a depth of 240 feet. The offices are intended to be let, in suites of two or more rooms, to separate firms; and the object in view being to secure ample and convenient accommodation by THE MOST ECONOMICAL EXPENDITURE OF CAPITAL, the Directors will give a preference to the plans which best answer this object. The plans and specifications must be forwarded, under sealed covers, marked "Plans for Offices," to the undersigned, on or before the 7th APRIL next.—Any further information may be obtained, on application to ADAM SMITH, Esq. C.E. Great Grimsby.—By order,

EDWARD ROSS, Secretary

Manchester, March 11, 1856

THE BURIAL BOARD of the PARISH of HITCHIN, in the county of Hertford, are desirous of receiving PLANS, DESIGNS, and ESTIMATES, comprising ground-plans, sections, and elevations, for laying out, planting, and fencing a new BURIAL GROUND, with suitable entrance gates at each end, and for building Two Chapels and a Lodge. The ground is nearly square and level, and contains five acres. The chapels it is proposed to place in the centre, and in one building: the area of the interior of each chapel to be 35 feet by 17 feet, and the chapels to be separated by a wall. The cost of the chapels and cottage not to exceed 1,200l. The party whose plans are approved, will, at the option of the Board, be paid the sum of 21l. and have the superintendence of the works. The plans and estimates must be delivered, free of expense, at the Office of the Clerk to the Board, situate at Hitchin aforesaid, on or before the 7th day of April next. Each plan is to be distinguished by a motto and a sealed letter similarly endorsed, containing the author's name and address, to be sent therewith. The Board do not bind themselves to accept any plan, and all those not approved will be returned upon application. CHARLES TIMBS, Clerk to the Board.

Hitchin, 10th March, 1856.

CONTRACTS.

TO BUILDERS.

TYERMAN'S PATENT HOOP-IRON BOND.

Adopted by the Honourable Board of Ordnance, the Commissioners of Parks, Palaces, and Public Buildings, &c. &c. &c.

TARIFF OF PRICES Beyond the current Price of Hoop-iron

Gauge.	In wide.	Per 1 yard.
No 16 ..	1½ ..	2d.
17 ..	1½ ..	2½d.
15 ..	1½ ..	3d.
13 ..	2 ..	4d.
12 ..	2½ ..	5d.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 11 inches on both sides alternately, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming reversed claws, which are so bent that a direct end grain of the iron is presented longitudinally, offering most powerful and effectual resistance, and which become, when built into the brickwork, embedded in the structure, preventing the possibility of longitudinal escape, and a complete and permanent bonding together of the whole building is thereby obtained.

Patentee—FREDERICK TYERMAN, Architect, 44, Weymouth-street.

Sole Manufacturers—THOMAS PERRY and SONS, Government Contractors, Bilston.

London Depôt—163, OXFORD-STREET.

HART AND SON,

S. G. wishes to call attention to his WHOLE and HALF-SOCKET PIPES, made on the principle of PILBROW'S IMPROVED REBATED SOCKET-END, which fully secures a joint free from obstructions, and meets the demand for removing Pipes at any point.

5s. 6d. each; if fitted with PATENT AIR-TIGHT VALVES, 1s. 6d. each extra.

Also to his IMPROVED REGISTERED CLOSET-PAN, with an impervious White Glaze inside, and formed to insure a Flush of Water over the entire Internal Surface. Made with or without STEPHEN GREEN'S PATENT AIR-TIGHT VALVE on the top of the Trap.

N.B. Prospectuses, with Prices and Terms, forwarded post-free, as also Prospectuses of STEPHEN GREEN'S PATENT SELF-ACTING FLUSHING CLOSET, complete, with Seat and Riser, &c.

WILLIAM INGHAM AND SONS,

WORTLEY FIRE-BRICK, GAS RETORT, SANITARY PIPE, AND TERRA-COTTA WORKS, NEAR LEEDS, YORKSHIRE,

Manufacturers of Glazed Sanitary and Water Pipes, from 2 to 36 inches diameter; Invert Blocks for Sewer Bottoms, Closet-pans, Fire-clay Gas Retorts, Fire Bricks, Chimney Tops, Crucibles, and a variety of Articles in Terra-cotta.

N.B. Superior Fire-clay, for Glass-house Pots and Crucibles.

London Agents—Messrs. CHADWICK and AKEROYD, Willington Stone-wharf, Regent's-park Basin.

Manchester Agent—Mr. TODD CARR, Arch 14, Birmingham-street, London-road Station.

Burnley Agent—Mr. JAMES SAGAR, Canal Wharf.

Leeds Stores—Albion-place, Albion-street.

W. I. & SONS beg to inform Architects, Engineers, Contractors, Iron Masters, Builders, &c. that the whole of the above-named Articles are manufactured from the celebrated Wortley Fire-clay, and they (having worked the same for upwards of thirty years, can furnish first-class references.

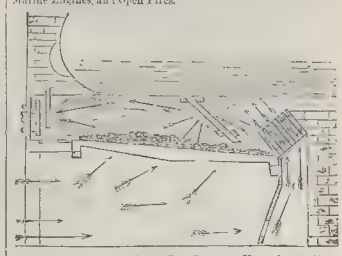
CHEAP AND DURABLE ROOFING.

By Her Majesty's  Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON,

Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.



Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION, as THE ONLY WORKS in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

LESS FUEL, MORE STEAM, NO SMOKE.

GARDNER'S PATENT SMOKE CONSUMER is SELF-ACTING, EASILY FIXED at a SMALL COST, IMPROVES the DRAUGHT, and SAVES FUEL. Applicable to all Furnaces, Boilers, Ovens, Locomotives, Marine Engines, and Open Fires.

"Chemical Works, Bow Common, November 9, 1855.

"DEAR SIR,—In answer to your further inquiry concerning the saving of fuel in connexion with the use of your patented apparatus, to which inquiry I was hitherto, from incomplete observation, unable to reply, I beg now to state that we are enabled without difficulty and without smoke, to command a full supply of steam, and to generate it much quicker than we could previously. We employ an ordinary furnace coal. I feel satisfied there is a considerable saving of fuel, the precise amount of which we cannot at present determine.

"I remain, dear Sir, yours truly,

"To E. V. GARDNER, Esq." "FRED'K. ALLEN.

Apply to the PATENTEE, 21, Norfolk-street, Middlesex Hospital; or to Messrs. BURDIDGE and HEALY, 128, Dorset-street, Fleet-street.

Bakers' Ovens fitted for 3l. license included.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTER'S PATENT WIND-GUARD.—This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.

By Her Majesty's  Royal Letters Patent.

DUPREE and CO.'S DEFIANCE WINDGUARD and VENTILATORS, &c. for the perfect cure of Down-draft Smoky Chimneys, suitable for Public and Private Buildings requiring a constant change of air.

Also

SHIP VENTILATORS, requiring no attention, imparting about six times the quantity of fresh air than any other in use.

Also

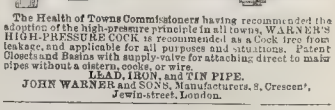
VENTILATING SKYLIGHTS, for Slate or Tile Roofing, without Paint or Putty.

Prospectuses sent on application.

London Depôt—ESNOUF and MANGER, 141, Minories, City.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the  admission of pure air through an

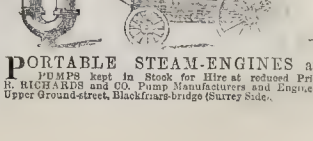


EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 137, Union-street, Borough; and of all respectable ironmongers, builders, &c.

TO WATER COMPANIES AND PLUMBERS.



HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

PUMPING and WINDING ENGINE.—TO BE LET on HIRE, or for SALE, a nearly new strong and simple PUMPING and WINDING STEAM ENGINE, of 10-horse power, by Medwin and Hall, with a pair of 10-inch pumps and all the driving gear complete. The contractor for whom it was fitted up will make a considerable sacrifice on the cost price, or let the whole on hire.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, 92, Blackfriars-road.

R. RICHARDS and CO. PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 32s. per doz. painted
Ditto .... 48s. per doz. galvanized.

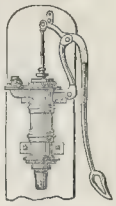
Upper Ground-street, Blackfriars Bridge, Surrey Side.

B. FOWLER & CO.'S PORTABLE PUMPS,

3-inch to 9-inch Barrels.

Plain or Sliding Telescope Suction,

ON HIRE.



SINGLE AND DOUBLE PUMPS, all sizes, to any depth, for Hand or Steam Power.

Patent Double-action and General Pump-makers, Builders' Smiths, &c.

WHITEFRIARS-STREET, Fleet-street.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the pr ce considerably less than Pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS, 8, Cresent, Jewin-street, London, Manufacturers and Patentees.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGOTT, 113, Fore-street City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

SUPERIOR LAND DRAINAGE.—AGRICULTURAL DRAIN-PIPES of all sizes, and in any quantities, can be SUPPLIED, either by water or land carriage, at a reduced rate, by applying to L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and CO. Great Northern wharf, York road King's-cross.

CLOSET BASINS, WHITE and BLUE URINALS, &c.

MANUFACTORY—MILLWALL.

DEPOT:

ARTHUR-STREET, NEW OXFORD-STREET.

PATENT DRAIN-PIPES, UNGLAZED, manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine Elms, London, and at all their Warehouses.

PRICES.

3 inch bore, in 2 ft.	6 in. lengths, at			3d. per foot.	
4	"	"	"	6d.	"
6	"	"	"	8d.	"
9	"	"	"	9d.	"
12	"	"	"	1s. 5d.	"
15	"	"	"	2s. 6d.	"

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture, and it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 22, Old Fish-street, near St. Paul's, London. Price for Closet and Apparatus complete, from 25s. and perfect action guaranteed.

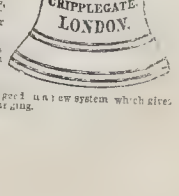
PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851. Also the Medal of the Society of Arts in 1852. The beautiful material, handsomer and more durable than marble, is now fitting its way into palaces, into the mansions of the nobility at home and abroad, into the high-class, durable buildings, as well as into the humbler but large class of houses in general, knowing that of any other product on that scale at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among these are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of hall tables, chiffoniers, console tables, washstands, pier-tables, dressing-tables, cabinets, cupboards, trays, panels, and brackets; wash-stand tops, billiard tables, tables for sale, vestibules, and flooring. Price lists can be had on application to MR. MAGNUS, 16 and 14, Upper Belgrave-place, Pimlico.
N.B. Paim slate work executed from a single article to the most extensive contracts, for home and abroad.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING especially in damp situations.
FROM 2s. 6d. PER SQUARE YARD.
Country Builders supplied with Asphalte for footings and basement floors, with instructions for use.
Apply to JOHN PILKINGTON, Poloneeau and Limmer Asphalte Office, Monument-chambers, 14, Fish-street-hill, London.
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.



CROGGON and COMPANY, Manufacturers of
PATENT ASPHALTE ROOFING,
BOILER, RAILWAY, SHEATHING and INODOROUS FELT,
For Damp Walls, and Lining Iron Houses,
2, DOWGATE HILL, LONDON.

PAVINGS.—BURRETT'S INJECTED STONE ORNAMENTAL PAVINGS, hard remarkable and impervious to moisture. Is for covering any kind of brick dock. Only per foot. Plain square ornamental slabs, 1s. 6d. per foot. 40, Bridge-place, Harrow-road, Paddington, application at the Works of architects and builders respectfully requested.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, the yard or per barge. Stocks, lime, and old bricks, Dry rubbish delivered per barge, in any quantity, alongside the Thames.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.
W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, have removed from No. 21 Wharf, Harrow-road, to 9, North Wharf-road, Paddington, have now on sale 1000 Garden and Screened Gravel. For terms, &c. apply at the Wharf.
Contractors supplied to any extent.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.
J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to make Church Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has before been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c., cast for any size, note, or weight, singly or in peals.
TUNED BY MACHINERY
Stocked and wheels cast for hanging. Old Bells recast or taken in exchange.
MUSICAL HAND BELLS tuned to the Chromatic Scale with improved Clapper, &c., and a new system which gives superior tone and facility for ringing.

INSTITUTED 1837.

								100	

The Author will endeavour in the several chapters to define the apparent origin, and trace the development of the several styles of Ornament. He will proceed to ascertain the laws which govern their composition; both those which are general to all styles and those which are special to each. He will further attempt in the 20th chapter to show how, bearing in mind those general laws which he finds acting to pervade these works of nature and revelation, we may yet go forward, and, whilst availing ourselves of the experience of all time, may be enabled to produce works in harmony with our own times instead of blindly following in the footsteps of the past.

The collection of this vast amount of material has been the labour of many years. On the eve of giving it forth to the world the Author fully feels the difficulty of the task he has undertaken; he trusts, nevertheless, that with this collection, artists, and all others engaged in any way with the decorative arts, will have before them an amount of material which does not elsewhere exist in any such convenient form, and in the use of which it will be his endeavour to serve them as a guide.

N.B. The Letterpress will appear at intervals during the progress of the Work. Size, 8vo. royal.

Published by DAY and SON, LITHOGRAPHERS to the QUEEN, 6, GATE-STREET, LINCOLN'S-INN-FIELDS.

The Builder.

VOL. XIV.—No. 684.

TO PARIS at this moment all eyes are directed. The world waits on tip-toe to hear the result of the conferences now going on there. Earnest must be the hope of all who have at heart the welfare of their fellow-creatures, that a substantial peace, honourable and remunerative to the allies, may be achieved. Even the probabilities, however, are at present shrouded in mystery; and all the arrangements which have been made give the notion of an elaborate scheme for stock-jobbing purposes. Who will assess the value of one single hour's exclusive knowledge of the decisions of the curtained and guarded conference chamber?

It would be instructive to trace, hereafter, the real names of the large dealers in Government securities, both in England and France, immediately preceding the announcements of the plenipotentiaries. With this, however, beyond the passing remark, we need not interfere. It is not Paris political that immediately concerns us, but Paris monumental, artistic, and sanitary: and our present object is to add to our series of views illustrative of that capital—a view of the east end and south side of the cathedral of Notre Dame.*

We have already referred briefly to the history of Notre Dame.† The chapels about the choir were finished at the end of the thirteenth century or the beginning of the fourteenth. Between the south side of the cathedral and the Seine stood the episcopal palace, a structure of great antiquity. All that remained of it, together with the modern building which had taken the place of the old work, was sacked and destroyed in 1831, and at the present time the new sacristy of the cathedral (shown in our view) and a public garden occupy the site. M. Guilhermy, in his "Itinéraire," from which we are quoting, gives a graphic account of the destruction of the palace. The building, invaded, he says, by a countless and furious mob, was nothing more than a ruin in a few minutes. At one and the same moment they rooted up the railings and the flights of steps, they undermined the walls, they tore off the roof, they threw out of the windows the marbles, woodwork, and furniture of the apartments. A troop of barbarians formed a chain from the library of the palace down to the parapet of the quay: the books and precious MSS. were passed from hand to hand, each tearing them as he would, and the last man pitched them into the river. And all this was done accompanied by fierce songs and frightful howlings!

The enclosure of the choir and absis of the cathedral was reconstructed at intervals between the years 1257 and 1310. The trefoiled niches in the face of the flying buttresses contained statues which all showed traces of colour, and belonged to the fourteenth century. The flying buttresses themselves (rebuilt when the chapels were constructed) are to our eyes heavy and ugly, and seem to want pinnacles at the top. Their ugliness was less observable when they were in their ancient dark coat.

The new works at the cathedral were begun about 1845, in which year the Government were roused to the necessity of maintaining the ancient monuments of the State, and voted a sum of money for the purpose. The superintendence of the restoration was placed in the hands of M. Lassus and M. Viollet-le-Duc, by whom it has been carried out with unremitting attention. The building had been greatly damaged by the men of the preceding century.

The choir of Notre Dame is one of, if not the, earliest specimen of what we should here call Early English. The first stone was laid in the year of the completion of St. Germain des Prés, 1163, and in 1182 the high altar was consecrated.

The general uniformity of style in a building so vast as Notre Dame of Paris, is very striking to an eye accustomed to the varieties observable in most of our cathedrals. Although its erection occupied a considerable period of time, there is a remarkable correspondence in character throughout. The stone of which the building is constructed is from the quarries in the neighbourhood of Paris, the possession of which has tended so much to the elegance of the city. The enormous wooden roof, of oak, which crowns the building, 356 feet (French) in length, is covered, according to M. Guilhermy, with 1,236 sheets of lead, each 10 feet long and 3 feet wide. At the point where the transept crosses the nave there was anciently a spire, also covered with lead, 104 feet high from the ridge of the roof. It fell into decay in 1792, and was removed soon afterwards.

The magnificent rose window in the south transept, seen in the view, is filled with the original stained glass. This is the case, too, with the window in the north transept and the rose window in the west front. The glass is beautiful in colour, and exhibits a multitude of subjects.

The Hôtel de Cluny, on the other side of the Seine, but not far off, contains some of the vestiges of earlier buildings which were found on the site of Notre Dame. The Palais des Thermes, which adjoins the Hôtel de Cluny, is the most ancient monument in Paris, being at least as old as the beginning of the fourth century. Together, they contain a collection of national antiquities of the deepest interest, comprising about 2,600 objects,—sculpture, carving, pictures, glass, jewellery, ivories, decorations, enamels, porcelain, and metal work.

There is nothing more instructive in Paris than this museum, and it is a heavy reproach to those who have the power, that in England, where the number of such works in private hands is so great as it is, there is no similar collection open to the public.

The Hôtel de Cluny is itself a quaint fifteenth-century building, displaying many curious bits, especially the chapel, with its central column, its range of canopied niches, and the staircase in the angle with pierced stone screen around it.

If there had been a national institution of this kind in England, we should probably have retained here the singularly fine gold *retable*, which was given by the Emperor Henry, in 1019, to the cathedral of Basle, and is now in the Hôtel de Cluny. It was hidden in the vault of the cathedral for safety, when the people of Basle adopted the reformed religion, and was afterwards sold for the benefit of the canton. A year or so ago the owner of it sought to sell it to some public institution, and the French Government obtained possession of it. It is an extraordinary relic, whether considered with regard to its date or its intrinsic beauty. The principal feature is an arcade of five openings, the centre higher than the others, with a figure in each. The whole is in low relief, executed in *repoussé* work, sharpened by the graver. The citizens of Basle, who have been spending much money in the restoration of their cathedral, must regret their loss.

Wandering here in the Palace of the Baths, where the Roman emperor Julian resided, and through the museum of the Hôtel de Cluny, the manners, progress, and the achievements in art of the French people, during at least fifteen centuries, are brought vividly before the eyes and mind of the observer.

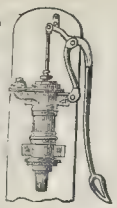
* See p. 137.

† See p. 537, vol. xiii. and for a view of the ironwork on one of the doors, p. 635, in same volume. For recent notices and views of other buildings in Paris, see pp. 481, 505, 511, 537, 543, &c. same volume; and pp. 1 and 7, present volume.

PARIS NEWS.

Construction of Granaries.—Amongst the practical results of the Paris Universal Exhibition, the introduction of M. Fluent's granaries is not the meanest. Their object is to preserve the corn sound, even in great masses. They are constructed so as to form a division of compartments (*Silos*), all on one line, and occupying the whole height of a building. The grain is passed through hoppers, each being regulated by an especial trap. Towards the end of the silo, the grain does not descend perpendicularly, but is prevented by a number of diaphragms, placed one above another, at an angle of 45 degrees, and extending all the length of the silo. In consequence of this division in small and vertical compartments, the mass of grain becomes divided, and has to glide down in a diagonal line. The interval and the dimensions are thus distributed so as to allow the passing of the grain upon the whole length of the compartment, which passage takes place at a rate made uniform by the equality of friction. At the issue from the vertical silo, the grain is conducted through a spout, when it is seized by an Archimedian screw, at each winding of which there is a little palette, which turns the grain as would a shovel. It is thus conducted into a small reservoir, whence it is reconducted to the top of the granary, above the upper orifice of the vertical silos. Here it is taken hold of by a sieve, which agitates it again, and makes it descend in a sort of rain on the lower mass.

A Marble Company.—There has been formed at Paris a company for working the extensive marble quarries of the Departement de la Sarthe. The value of marble used in Paris for sepulchral monuments, is six millions; while that of the marble used in the whole of France, reaches thirty millions.



Aluminium.—The Annuaire of the Bureau de Longitude, Paris, states the specific gravity of the new metal, as follows:—At the temperature of water of 4 degrees Réaumur, the specific gravity of melted aluminium is 2·56, that of forged (malleated), 2·67; whereas that of gold is 19·36; and that of platinum, 21·53.

Chatelain, Atlas.—Chronological Atlas of Railroads. Paris, 1856.—In this deserving work the different periods of French railway construction during the last thirty-two years, are made visible in a series of maps. The first chart depicts the embryo state of French railroads from 1823 to 1839; the second, the state of infancy to the year 1841; and thus successively every period of expansion is laid down. Chart eighth shows the different railways, which, from 1823 to 1856, have been constructed by the different Governments. A general historical Atlas of all the railways in the world will become, by and bye, a desideratum.

INQUIRY INTO THE DESTRUCTION OF COVENT-GARDEN THEATRE.

LITTLE progress has been made towards discovering the cause of the destruction of Covent-garden Theatre. On Tuesday last an inquest was opened before Mr. Bedford, the coroner for Westminster, at the instance of the churchwardens of the parish of St. Paul, Covent-garden, who instructed their vestry-clerk, Mr. Mosley Tayler, to take the requisite steps in the matter. The duties of the coroner in old times included inquiry into the origin of fires; and the revival of this portion of the office (originally made by Mr. Payne, the coroner for the City) has very properly been carried forward in the present most important instance. The walls of the theatre—some of them reaching to the height of 70 or 80 feet—the north wall bounding a thoroughfare, and all the walls endangering the adjacent premises—have become even less secure than when we noticed them last week. If we refer to that immediate evidence—as to *one* of the bearings of inquiries like this which

TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to
JOHN WARNER & SONS'
PATENT VIBRATING
STANDARD PUMP,
which is recommended for the simplicity of its construction, and the ease with which it works.
By the introduction of the vibrating standard, the cumbrous carriage and expensive rings and guides are unnecessary, rendering the price considerably less than Pumps made on the old plan.
Beer and Water Engines for raising fluids from a depth not exceeding 33 feet; also, Garden Engines constructed on the same principle.
JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

R. RICHARDS and CO.
PUMP MANUFACTURERS and ENGINEERS.
Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.
PUMPS ON HIRE.
Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

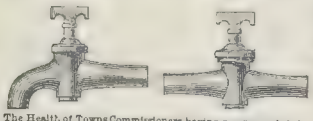
Iron Pails 28s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

B. FOWLER & CO.'S
PORTABLE PUMPS,
3-inch to 9-inch Barrels,
Plain or Sliding Telescope Suction,
ON HIRE.

SINGLE AND DOUBLE PUMPS,
all sizes,
to any depth, for Hand or Steam Power.

Patent Double-action and General Pump-makers, Builders' Smiths, &c.
WHITEFRIARS-STREET,
Fleet-street.



PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

PUMPING and WINDING ENGINE.—TO BE LET on HIRE, or for SALE, a nearly new strong and simple PUMPING and WINDING STEAM ENGINE, of 10-horse power, by Medwin and Hall, with a pair of bench pumps and all the driving gear complete. The Contractor for whom it was first up will make a considerable sacrifice on the cost price, to let the whole on hire. Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, 92, Blackfriars-road.

TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a cock free from leakage, and applicable for all purposes and situations. Patent Closet and Basin Cocks with supply-valve for attaching direct to main pipes without a cistern. Cocks, or wire
LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

LYTCHETT POTTERY.—For SALE by PRIVATE CONTRACT, the LEASE and PLANT of the above Premises. The lease consists of about fourteen acres of very superior clay for pottery and brickmaking. The drain pipes made in this pottery are equal, if not superior, to any yet in the market, and the Brickmade will bear comparison with any yet made. The plant comprises three potters kilns and two brick kilns, with pug machines, pipe-mills, and all other necessary apparatus. Lytchett Pottery is 3 miles from the South-Western Railway, 1 mile from the port of Poole. For further particulars, and to view, apply to H. F. FISHER, Blandford.

GREAT REDUCTION in the PRICE of STONEWARE POTTERY from this date.
VICTORIA POTTERY, LEIGH, near SOUTHEND; London Establishment, Pale on Wharf, 80 Bankside.—DAVID MOUNTAGUE, Manufacturer of every article of Stoneware POTTERY. Having now fitted up the Steam Apparatus for the Drain Pipes and Stoneware Pipes &c. &c. on the most advantageous terms. The new lists of prices will be forwarded on application, as above.—Feb. 11, 1856.

GREAT REDUCTION IN PRICE OF DOULTON'S DRAIN-PIPES.

HENRY DOULTON AND CO.

Beg to inform Builders, Contractors, and others, that they have made a considerable REDUCTION in the PRICES of their

GLAZED STONEWARE DRAIN-PIPES,

Drawings and Prices will be forwarded on application.

MANUFACTORIES: HIGH-STREET, LAMBETH, LONDON; ROWLEY REGIS, STAFFORDSHIRE; and SMETHWICK, near BIRMINGHAM.
OFFICES: HIGH-STREET, LAMBETH, LONDON.

JOHN DOULTON, BROTHERS, AND CO.

LIVERPOOL POTTERY,
ST. HELEN'S.
STORES—70, SOHO-STREET, LIVERPOOL.

MANUFACTURERS OF
DOULTON'S STONE-WARE PIPES. | DOULTON'S INVERT BLOCKS FOR SEWER BOTTOMS.
DOULTON'S HALF-SOCKET PIPES. | DOULTON'S PATENT JUNCTION BLOCKS.
TERRA-COTTA CHIMNEY-TOPS, FIRE-CLAY FLUE-PIPES, RIDGE & PAVING TILES, &c.

REDUCTION IN THE PRICE OF CLOSET-PANS.

DOULTON AND WATTS,
LAMBETH POTTERY, HIGH-STREET, LAMBETH,
Have reduced the Price of their PATENT ENAMELLED CLOSET-PANS WITH TRAPS, to
5s. 6d.

These Pans, therefore, which have a strong Vitrified Body, as well as a White Interior Glaze, may now be obtained at the price of the commonest description of Closet-pans.

GREAT REDUCTION IN THE PRICE OF STONEWARE DRAIN-PIPES.

WILLIAM NORTHEN,
UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH,
Begs to call the attention of Surveyors, Contractors, Builders, and others, to a very great REDUCTION in the PRICES of his

GLAZED STONEWARE DRAIN-PIPES.

LISTS OF PRICES FORWARDED ON APPLICATION.

KINSON POTTERY AND CLAY WORKS, POOLE, DORSET,

DEPOT, 2 AND 3, HIGH-STREET, LAMBETH.

HALF SOCKET.

WHOLE SOCKET.

Manufacturers of every description of Sanitary Glazed Sewage Pipes, Bends, Junctions, White Glazed Closet Pans, Gas Retorts, Furnace Blocks, Crucibles, Fire Clay, &c. &c.
The Fire Bricks made from the Clay of this estate have been tested, and proved to be in every respect equal to those of Stourbridge and Newcastle.
DRAWINGS AND PRICES MAY BE HAD OF J. COX, AS ABOVE.

SUPERIOR LAND DRAINAGE.—AGRICULTURAL DRAIN-PIPES of all sizes, and in any quantities, can be SUPPLIED, either by water or land carriage, at a reduced rate by applying to L. B. PEARSE and CO. Great Northern Wharf, York Road, Kings-road.

FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulic or gas. Pumps let on hire.
W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 7, Strand, London.

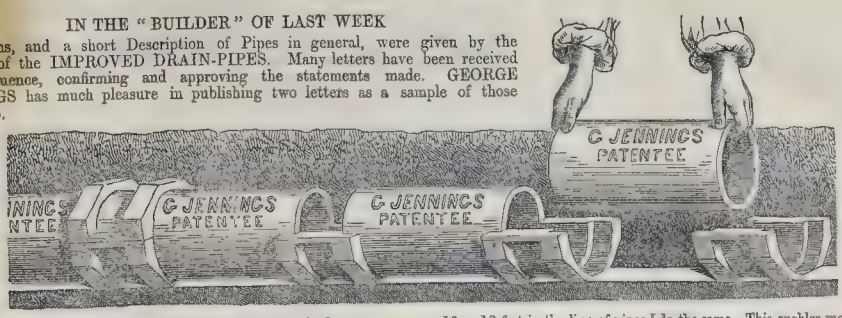
COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES BENDS, JUNCTIONS, and TRAPS (the waterful power by all to be of the best manufacture, but of unparalleled quality, combined with the greatest strength to meet the approbation of consumers). Agents, L. B. PEARSE and Co. Great Northern wharf, York-road, Kings-cross.

WHITE and BLUE CLOSET BASINS, URINALS, &c.
MILLWALL POTTERY.
DEPOT:
ARTHUR-STREET, NEW OXFORD-STREET.

TO DRAIN PIPE MAKERS.
WANTED IMMEDIATELY, 10,000 9-inch RED GLAZED SOCKET-PIPES, to Farnborough Station, South Western, or South Eastern, Railway.—Address to H. BIRCH, Contractor, Farnham, Surrey.

WILLIAM GILBERT, Tividale Pottery and Blue Tile Works, near Dudley, Staffordshire. The BLUE WARE SANITARY PIPES made by W. GILBERT are the only GLAZED pipes of the kind manufactured in England. They are well vitrified, so otherwise glazed, and very durable, being subjected to intense heat in the kilns. Being moulded by machinery, they are as smooth and straight as stoneware pipes; form thus any other material. The sockets are deep and made much stronger than the body of the pipe, so as to resist all unequal pressure under ground. These pipes are cheaper than stoneware, and may be had in 2 feet lengths, of 2 in., 3 in., 4 in., 6 in., 9 in., 12 in., 15 in. and 18 in. bore, with all kinds of syphons, junctions, bends, stables, and sink grates to match. Fire-clay chimney-pots of 10 patterns. Glazed stoneware sewerage pipes, &c. &c. Terra cotta clay brackets, trusses, vases, fountains, busts, statues pedestals, &c.

DRAUGHTS ROUND DOORS and WINDOWS.—GREENWOOD'S PATENT INDIA-RUBBER STOPS, to supersede list or leather, for the purpose of keeping out dust and draught round hung windows, closets, show-cases, &c., making the same air-tight. Price 6d. per set. Spring Slides for bottoms of doors, &c. &c.



JOHN GREENWOOD, Carpenter, 10, Arthur-street West, London-bridge.

TO ENGINEERS, ARCHITECTS, SURVEYORS, AND OTHERS, INTERESTED IN EFFICIENT DRAINAGE.

IN THE "BUILDER" OF LAST WEEK

Illustrations, and a short Description of Pipes in general, were given by the Patentee of the IMPROVED DRAIN-PIPES. Many letters have been received in consequence, confirming and approving the statements made. GEORGE JENNINGS has much pleasure in publishing two letters as a sample of those referred to.

"City Bank, Threadneedle Street,
"February 12th, 1856.

"SIR,—I quite agree with all you state in your advertisement in last week's *Builder*. As a further illustration of the necessity of examination, I may add, that I was sent by Messrs. Hunt and Stevenson, in 1853, to Dr. Wordsworth's, to examine and report upon the drainage of the mansion and offices. Before I could do so, I had to break into the drain-pipes at various points. Eventually it was found necessary to break the pipes every fifteen feet to cleanse them; the difficulty of restoration was great, and the expense considerable.

"As a clerk of works of some years' standing, permit me to observe that drains and drain-pipes are often nearly stopped by shavings, &c. before the works are out of the contractor's hands.

"However strict a clerk of works may be, foreign matters will find their way into the drainage.

"In all cases where I have used your pipes—and I recommend its adoption generally—I leave a saddle loose at the foot of every soil or rain pipe, and every 10 or 12 feet in the line of pipes I do the same. This enables me, at the completion of the works, to see if my drains are perfectly clear; if so, I have the saddles previously left loose, bedded like the rest. Although a comparative stranger, I wish you all the success your ingenuity deserves.

"I am, Sir, your obedient Servant,
"JOHN JARVIS.

"Mr. George Jennings."

"Surveyor's Office, Yeovil, February 11th, 1856.

"SIR,—I have much pleasure in bearing testimony in favour of your patent drain-pipes. We are using them in this town both for public and private drains, and they are generally considered equal in manufacture, and superior in principle, to any other pipes yet offered to the public.

"I am, Sir, your obedient Servant,
"ROBERT L. WILLIAMS, Town Surveyor.

"Mr. Jennings."

The Pipes above illustrated and referred to, with all the advantages they offer, are the SAME PRICE AS CHARGED BY THE RESPECTABLE LONDON POTTERS.

The Show-rooms now built on Jennings's Wharf, Holland-street, Blackfriars, will be open in March next, for the Exhibition of Sanitary Inventions, suitable for EVERY CLASS OF BUILDING, PUBLIC OR PRIVATE. In the meantime, Illustrated Particulars and Prices of JENNINGS'S Self-acting and other Waterclosets, Urinals, Lavatories, Pumps, Sluice-Valves, Fire and other Cocks, Gully-traps, Shop-shutter Shoes, Earthenware Drain and Soil Pipes, &c. &c. can be had free, on application, or by post, on enclosing two stamps to

GEORGE JENNINGS, SANITARY ENGINEER, GREAT CHARLOTTE-STREET, BLACKFRIARS.

N.B.—Illustrations and Particulars of FOUR OTHER PATENTS FOR SANITARY PURPOSES just taken by GEORGE JENNINGS will appear in the course of a week. In the mean time they can be seen at the Factory, as above.

WILLIAM INGHAM AND SONS,

WORTLEY FIRE-BRICK, GAS RETORT, SANITARY PIPE, AND TERRA-COTTA WORKS, NEAR LEEDS, YORKSHIRE,

Manufacturers of Glazed Sanitary and Water Pipes, from 2 to 36 inches diameter; Invert Blocks for Sewer Bottoms, Closet-pans, Fire-clay Gas Retorts, Fire Bricks, Chimney Tops, Crucibles, and a variety of Articles in Terra-cotta.

N.B. Superior Fire-clay, for Glass-house Pots and Crucibles.

London Agents—Messrs. CHADWICK and AKEROYD, Willington Stone-wharf, Regent's park Basin.

Manchester Agent—Mr. TODD CARR, Arch 14, Birmingham-street, London-road Station.

Burnley Agent Mr. JAMES SAGAR, Canal Wharf.

Leeds Stores—Albion-place, Albion-street.

W. I. & SONS beg to inform Architects, Engineers, Contractors, Iron Masters, Builders, &c. that the whole of the above-named Articles are manufactured from the celebrated Wortley Fire-clay, and they (having worked the same for upwards of thirty years) can furnish first-class references.

AYLESFORD POTTERY COMPANY,

BELVEDERE-ROAD, LAMBETH.

MANUFACTORY AT AYLESFORD, NEAR MAIDSTONE, KENT.

The above Company having now been in existence for nearly six years, and having during this period supplied DRAIN PIPES, &c. to some of the largest Works in and around London, viz.:—The New Cattle Market, Wellington and Chatham Barracks, Deptford Dockyard, Her Majesty's Commissioners of Works, &c. and in all instances parties using them expressing themselves satisfied therewith,—take this as a fair test of the quality of the articles supplied by them; and as they now feel themselves established as Potters, beg to offer their goods to Contractors, the Trade, &c. of a first-rate quality and manufacture, and at the lowest possible prices, NOT BEING IN ANY WAY CONNECTED WITH THE LONDON POTTERY ASSOCIATION.

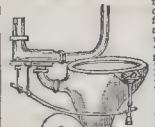
GREAT REDUCTION IN PRICES

OF WHOLE OR HALF-SOCKET GLAZED STONEWARE DRAIN-PIPES.

AN ILLUSTRATED LIST OF PRICES SENT FREE ON APPLICATION TO

HENRY MILLICHAMP,

MANUFACTURER OF EVERY KIND OF STONEWARE DRAIN-PIPES, BENDS, JUNCTIONS, &c. &c.



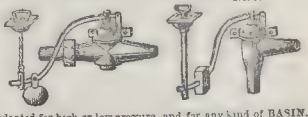
BY PATENTED MACHINERY, AND UPON THE MOST APPROVED PRINCIPLE.

MANUFACTORIES—65, PRINCE'S-STREET, LAMBETH, and BRUNTON'S WHARF POTTERIES, COMMERCIAL-ROAD, LIMEHOUSE.

SUPERIOR STONEWARE GLAZED PIPES of a quality not to be surpassed.—E. and W. STURGE respectfully invite attention to the very superior character of their stone pipes, which they are confident are such as must give great satisfaction, the price being also lower than many in the trade, viz. 25 per cent. discount off the list for cash. Junction Bends, &c. Pans and Traps of the first quality. Yorkshire Paving, Sinks, Sills, &c. all at low cash prices.—E. and W. STURGE, Bridge Wharf, City-road.

N.B. A small extra charge is made upon goods required to be delivered.—October 1, 1855.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, distributing with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials, and references of the highest respectability can be had on application. Specimens of each can be seen fixed upon the Premises of the Patentee, W. PATTEN, 23, Old Fish-street, near St. Paul's, London.—Price for Closet and Apparatus complete, from 39s. and perfect action guaranteed.



PATENT DRAIN-PIPES, UNGLAZED, manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine Elms, London, and at all their Warehouses.

PRICES

3 inch bore, in 2 ft. 6 in. lengths, at				3d. per foot.

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The principal resistance red-ware is overcome by this manufacture. And it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE No. 7.

is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under considerable pressure of 100 to 200 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New-cut, Lambeth.

N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price, complete, 14s. 6d. each.

Rent very moderate. No fixtures to take.—Apply at the PRINCE OF WALES, Union-road, Wandsworth-road, near the premises.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface in covering all woods and metals from any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheaper rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of, or from the admixture of other substances, the paint will not only produce it, an imperfect more or less opaque colour, but in proportion as the oxide contain substances calculated to give it increased weight, it then produces a very inferior article instead of a very superior paint, and the economy realised by the purchaser of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agent in London, Messrs CHARLES DEVAUX and CO. Wholesale Agents, 69, King William-street City; and by the Manufacturing and Painting Agent, Mr FREDK. BRABY, Fitzroy Works, Newroad. In Manchester and Liverpool by CLAY, 5, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, In Leith, by Messrs. R. ANDERSON and CO. Timber-builders and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs and upwards, to be had of the Company's Agents at Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paints by contract.

For further particulars, apply to the Company's General Agency in London, 13, Manchester buildings, Westminster.

TERRA-COTTA WORKS, Blackfriars-road, London The PRIZE MEDAL for MATERIAL, WORKMANSHIP in TERRA COTTA to MR. T. HARMAN, late of Coade's Original Works, and sole owner to them in the manufacture of this durable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, in the adornment of our noblest buildings, and is the only fire-proof material for external use. Specimens of time unimpaired, Gr ups, Statues, Vases, Fountains, and Ecclesiastical Embellishments, at prices and quality that will defy competition. A large Stock of Chimney Shafts, Vases, and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

BLASHFIELD'S PATENT TERRA-COTTA, Manufactured at Mill-wall, Isle of Dogs.—Capitals Consoles, Trusses for Parapets, Balusters, String Courses, Friezes, Bas-relievos, Vases, Statues, Chimney-shafts, and all other Architectural Ornaments, Moulded, Sculptured, and Carved, in the best manner, and warranted to stand heat and frost, either in Buff or Red-coloured Terra-cotta.—A great variety and large stock may be seen at BLASHFIELD'S Warehouse and Show-rooms, No. 1, Praed-street, Paddington.

J. TURNER, Hon. Secretary, 15, Wilton-street.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.

Head-Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to develope its relation to the requirements of trade and manufacture, and its application to the common uses of life. Special courses are arranged in order to qualify schoolmasters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects:—Free-hand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting. The Classes for Drawing, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still life, &c. the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of China and Enamel Painting, Drawing and Engraving on Wood, and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees £2 per session, or part of the session. For Evening Classes only, £1 per session.

The Class for Practical Geometry and Perspective, or that for Moulding and Casting, may be attended separately on payment of a fee of £1. per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. Mejan. Classes for session,—Advanced Class, 2l. and 4l.; Elementary Class, 1l.; Evening Class, 10s.

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall-mall, London.

THE SOCIETY of ARTS' ANNUAL COLLECTION of INVENTIONS will be OPENED at the Society's House, John-street, Adelphi, on EASTER-MONDAY, the 24th MARCH. It will comprise models and specimens of recent inventions, whether patented, registered, or not, and of works of recent construction. Articles for exhibition must be forwarded, carriage paid, on the 6th, 7th, or 8th of MARCH.

INVENTORS who purpose to contribute MODELS or SPECIMENS to the Society of Arts' Annual Collection of Inventions, should communicate with the Secretary without delay, as the Exhibition will be opened at the Society's House, John-street, Adelphi, on Easter Monday, the 24th of March.

ST. THOMAS CHARTER-HOUSE SCHOOL of ART, Goswell-street, in connection with Marlborough House, Pall-mall. Evening Classes from Seven till Half past Nine. Studies: Class A, Freehand Drawing and Shading, from the flat and the round; Ornament Figure, &c. in chalk and sepia; Painting in Oil and Watercolours, &c. &c. Class B, Practical Geometry and Perspective; Architectural and Mechanical Drawing; Modelling in Clay and Casting.—Terms and further particulars to be obtained of the Secretary.

ARCHITECTURAL EXHIBITION, and Collection of Materials and Manufactures connected with Building, WILL CLOSE on SATURDAY NEXT. Open from NINE till dusk. Admission One Shilling.—All articles exhibited MUST be REMOVED on the 27th or 28th inst.

COMPETITIONS.

TO ARCHITECTS, SURVEYORS, AND OTHERS.

PLANS, DESIGNS, and DRAWINGS are requested for the ERECTION of TWO CEMETERY CHAPELS, under one roof, together with a Lodge and Entrance Gates, for the Grantham Burial-Ground (containing six acres of land), to include ground-plans and elevations, and to be accompanied by approximate estimates of the cost of the buildings to be faced with Ancaster stone, and the plinths to be of Mansfield stone. The whole expense (including fittings, &c. of chapels) not to exceed the sum of £1500. £10 is offered for the plan of the chapels and buildings considered to be the best, unless the architect shall also contract for the works, and £5. for the second best. The whole of the plans, &c. to be sent to me, sealed and endorsed; but without any name or distinguishing mark, on or before SATURDAY, the 1st day of MARCH next, inclosing a sealed letter in each case from the person forwarding it.

By order of the Burial Board,
ROBERT HENRY JOHNSTON, Clerk.

Grantham, Feb. 5, 1856.

LIVERPOOL FREE PUBLIC LIBRARY and MUSEUM.—To ARCHITECTS.—The Council of the Borough of Liverpool are about to ERECT a BUILDING for the purposes of the FREE PUBLIC LIBRARY and the DERBY MUSEUM, and offer a premium of One Hundred and Fifty Guineas for the best Design, and One Hundred Guineas for the second. The Designs are to be sent in on or before SATURDAY, MAY 31. Copies of the printed conditions and instructions to Architects, competing; and lithographed plans and sections of the site, may be had on application to Mr. J. STUART DALTON, Librarian, Free Public Library, Duke-street, Liverpool.

TO ARCHITECTS, &c. — PLANS for a NEW WORKHOUSE for BOLTON UNION.—The Guardians of the Poor of the Bolton Union are desirous of obtaining PLANS, SECTIONS, and WORKING DRAWINGS for the ERECTION of a WORKHOUSE, to accommodate 1500 inmates, the cost of the buildings not to exceed 12 per head. A premium of 50l. will be awarded for the best, and 30l. for the second best plan, but the Guardians will not be responsible for any payment for unsuccessful designs. The plans of the two successful competitors to be the property of the Guardians, who do not pledge themselves to employ either of the successful competitors in carrying out the undertaking. The designs must be sent in under seal, without name, and with a private mark or motto thereon, accompanied by a letter under cover, and sealed, containing a corresponding mark or motto, and the designer's name and address, to the Clerk, on or before MONDAY, the 7th APRIL, 1856.

JOHN WOODHOUSE, Clerk to the Guardians.

Union-office, Acresfield, Bolton, February 15, 1856.

GRANTHAM BURIAL BOARD.—EXTENSION of TIME for PLANS, &c.—The Period for sending in Plans for Chapels, Lodge, and Entrance Gates, is EXTENDED to SATURDAY, 22nd MARCH. Plans are also requested for PLANTING the GROUND and LAYING OUT the ROADS and WALKS thereon, two-thirds as consecrated, one-third unconsecrated, to be sent in by the same time, for which an additional premium of £5 is offered. The square is to be 220 yards by 133 yards. Entrance west.—By order of the Board,

ROBT. HY. JOHNSTON, Clerk.

Grantham, February 9th, 1856.

TO ARCHITECTS AND SURVEYORS.

THE COMMITTEE for BUILDING NEW NATIONAL SCHOOLS at LUTON, Beds, are desirous of receiving DESIGNS in COMPETITION for the ERECTION of such SCHOOLS. A plan of the site, with further particulars may be had on application, by letter only, and sixpence in postage stamps, to Mr. D. H. STARKIE, National Schoolmaster, Luton.

CONTRACTS.

CHORLEY IMPROVEMENT.—SEWERAGE TOR-MOUNDERS.

The Chorley Improvement Commissioners, being about to sewer, hereby give notice, that they are prepared to receive TENDERS from parties willing to undertake the following Contract:—

CONTRACT, No. 3.—For supply of Cast-Iron Street Gullies.

Forms of Tender may be had on application at the Commissioner's Office, Chorley; or at the Offices of ROBERT RAWLINSON, C.E. 24, Parliament-street, Westminster.—Sealed Tenders to be delivered at the Commissioners' Office, in the Town, by TWELVE o'clock, on SATURDAY, the 1st day of MARCH next, endorsed "Tenders for Gullies, Contract No. 3."

(Signed) RICHARD JACKSON, Clerk to the Commissioners.

Chorley, February 18, 1856.

BURLEY-IN-WHARFEDALE (Yorkshire). SEWERAGE WORKS.—The Local Board of Health for the district of Burley-in-Wharfedale hereby give notice, that are instructed to receive TENDERS from competent parties for MAKING and FINISHING certain SEWERS, DRAINS, MANHOLES, GULLIES, and other WORKS required for the sewerage and drainage of their district. Duplicate copies of the plans, sections, detailed drawings, and specifications may be seen at Burley, on application to the undersigned; also at the Offices of Mr J. M. LANDSBOROUGH, C.E. Engineer, 3, Queen-street, Bradford, from wh m printed forms of Tender, and any further information may be obtained. Tenders, properly sealed and endorsed, must be delivered to the undersigned, on or before FRIDAY, the 7th day of MARCH next. The Local Board do not bind themselves to accept the lowest or any Tender.—By order,

EDWARD BRUMPITT, Clerk to the Board.

Burley-in-Wharfedale, near Otley, 13th February, 1856.

CONTRACTS.

ORDNANCE CONTRACT for AGRICULTURAL DRAINAGE.—Sealed Tenders addressed to the Director General of Contracts, War Department, Pall-Mall, London, will be received until TWELVE o'clock on FRIDAY, 29th FEBRUARY instant, from parties willing to Contract for the AGRICULTURAL DRAINAGE of the SPACES and PARADES between the battalions and ground adjoining, at the CAMP at ALDERSHOT. Specifications and forms of Tender, together with any further information required, may be obtained on application to Mr. DREW, Clerk of Works, Royal Engineer's Office, Aldershot Camp, on and after MONDAY next, the 18th instant. The Tender to state the price per acre, and to be endorsed, "Tender for Agricultural Drainage at the Camp at Aldershot." The War Department reserves the right of rejecting the whole or any of the Tenders.

Royal Engineer's Office, Aldershot, Feb. 13, 1856.

ORDNANCE CONTRACT.—To BUILDERS and CONTRACTORS.—Sealed TENDERS will be received by the Director-General of Contracts, War Department, Pall-mall, London, until TWELVE o'clock on MONDAY, 10th MARCH next, from parties willing to contract for the ERECTION of a LAND TRANSPORT ESTABLISHMENT at the Camp, Aldershot. Plans may be seen, and specification and form of Tender obtained on application to Mr. BAKER, Clerk of Works, Royal Engineer Office, Camp, Aldershot, on and after MONDAY next, the 25th inst. The Tender to be endorsed, "Tender for Land Transport Establishment, Aldershot." The War Department reserves the right of rejecting the whole or any of the Tenders.

War Department, Aldershot Camp, 20th February, 1856.

THE LOCAL BOARD of HEALTH for the District of WATFORD are prepared to receive TENDERS for the MAKING and CONSTRUCTING certain SEWAGE TANKS at the outfall of their district, near the Town of Watford. The plan and drawings and specification may be inspected, also further particulars obtained, by application, at the Offices of JAMES PILBROW, C.E. Tottenham. The specifications and conditions of contract may be had upon payment of 5s. Tenders to be sent in on or before MONDAY, the 25th instant, endorsed "Tender for Sewage Tanks."—By order of the B. ard,

JOHN SEDGWICK, Clerk.

Board room, Watford, February 8, 1856.

TO BUILDERS AND OTHERS.

THE JOINT BURIAL BOARD for the TOWNSHIP and PARISH of FOLKESTONE, in the county of Kent, are desirous of CONTRACTING for BUILDING and FURNISHING, at the new Cemetery, near Cherlton-road, TWO CHAPELS, a Porter's Lodge and Entrance Gates, and the Boundary Wall and for providing and fixing the Entrance-gates, &c. Persons willing to contract, may see the plans and specifications at the Office of JOSEPH MENGHAM, Esq. Architect to the Board, Bouverie square, Folkestone, between the hours of TEN and FOUR on any day after the 19th instant. Sealed Tenders (marked "Tender for Buildings at Folkestone") for executing the whole or any of the works, are to be left at my Offices in Church-street, Folkestone, not later than FOUR o'clock in the afternoon of TUESDAY, the 18th day of MARCH next. It is stipulated that it shall not be incumbent on the Board to accept the lowest or any Tender.—By order of the Board,

Folkestone, 13th February, 1856. RICHARD HART, Clerk.

TO CONTRACTORS and BUILDERS.—The Board of Works for the Greenwich District, are prepared to receive TENDERS from Contractors for making the necessary DRAINS from HOUSES and BUILDINGS into the MAIN SEWERS of the DISTRICT. Further particulars may be known on and after MONDAY, the 25th instant, at the Board's Offices, Burney-street, Greenwich, where all Tenders for the above must be sent in, sealed up and endorsed, "Drainage Tenders," at or before FOUR o'clock in the afternoon of TUESDAY, the 4th of MARCH next.—By order,

Greenwich, February 21, 1856. H. W. JAMES, Clerk.

BOARD of WORKS for the HOLBORN DISTRICT.—The Board will meet at the Workhouse, in Little Gray's-inn-lane, on MONDAY, the 3rd day of MARCH next, at SEVEN o'clock in the afternoon precisely, to receive separate and distinct proposals in writing, sealed up, from persons desirous of CONTRACTING for one year, from Lady-day next—1st, for Removing the Dust, Ashes, Dirt, Soil, Stones, Brick Rubbish, Oyster Beds, Decayed Vegetables, and all Refuse Matter, from the Houses throughout this District (except Lamb's Conduit-street, and the Liberty of Glasshouse-yard); and secondly, for cleansing the Streets, Courts, Alleys, Passages, and Yards, and for sweeping the same, and the employment of Scavengers, Horses, and Wagons for the purpose. All persons delivering proposals are to attend. The Board do not bind itself to accept the lowest or any Tender. The security of two responsible householders will be required for the due performance of the Contracts; and the names and addresses of the parties proposed as such security must be delivered in with the Tenders.—Printed forms, and full particulars as to the quantities, may be had in the district, and at the Clerk's Office. One half of the expense of the Contracts to be paid by the contractors. By order of the Board,

S. W. HOPWOOD, Clerk.

Office, 7, Chancery-lane, February, 1856.

CONTRACT for LIGHTING with GAS and REPAIRING PUBLIC LAMPS.—The Crown Estate Paving Commissioners are ready to receive TENDERS from parties ready to receive TENDERS from persons willing to enter into a CONTRACT for the execution of the above mentioned services in and about the Royal Parks and Palaces, and the Districts under the jurisdiction, for a term of seven years, from the 24th day of JUNE, 1856. Printed specifications and forms of Tender may be obtained on application to me here, where the Tenders are to be delivered at or before ONE o'clock on WEDNESDAY, the 5th day of MARCH next.

FRANCIS ADAMS, Clerk to the Commissioners.

1, Whitehall, place, Feb. 13, 1856.

[For remainder of Contracts see next page.

CONTRACTS.

WESTBURY CEMETERY.—To BUILDERS and OTHERS.—The Burial Board of the Parish of Westbury invite sealed Tenders for BUILDING and COMPLETING the CHAPELS and LODGE, and also for CONSTRUCTING the BOUNDARY WALLS and ENTRANCE GATES of the Cemetery, according to the plans prepared for that purpose by Mr. E. G. BRETON, of Oxford, the Architect. The plans, drawings and specifications may be seen at Mr. BRETON'S, Architect, Oxford, between the hours of 10 a.m. and 5 p.m. until the 3rd day of MARCH next, and no Tender will be received unless delivered from the separate trades, or for the whole or any part of the works, but each Tender must specify whether for them, or for the lowest Tender for the whole of the works, and be delivered at the Vestry Room, Westbury, before the 10th day of MARCH next, marked "Tender for the Cemetery." Security for the due performance of the work to be prepared at the expense of the contractor will be required.

HENRY PINNIGER, Clerk to the Board.

Westbury, 19th February, 1856.

THE MARCH LOCAL BOARD of Health are prepared to receive TENDERS from competent persons for the EXECUTION of the WORKS connected in the following CONTRACTS for the Drainage and Water-supply of the District:—

CONTRACT A.—Sewers and Drainage Works.

CONTRACT B.—Well-sinking, Brick Tower, and Engine-House.

CONTRACT C.—A Steam-Engine, Wrought-iron Tank, Cast-iron Pipes, Pipe-laying, and Sundry Iron-work.

The plans and specifications may be inspected at the office of the said Local Board on MARCH 1st, where forms of tender may be obtained, and further information may be obtained of Mr. R. REYNOLDS, Rome Cottage, Bromley, Kent, C.E., Engineer to the Board.

Bridge. Sealed Tenders, properly endorsed, are to be delivered at the office of the Board, at Bow Bridge, before SATURDAY, the 1st day of MARCH next.

The Board do not bind themselves to accept the lowest or any tender.

By order,

THOS. T. ELLIOTT, Clerk to the Local Board.

March, 1st, 1856.

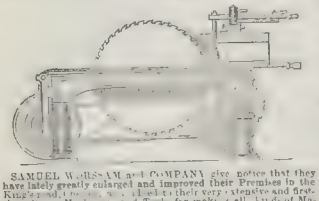
TO CONTRACTORS and OTHERS.—The Commissioners of Harbour Circuit at Byker, Newcastle-on-Tyne, are desirous of receiving TENDERS for the SUPPLY of STONE for the Breakwater and Pier Extension at the mouth of the River Tyne. The superficial extent of the work, and the depth of water, are sufficient to admit vessels of large burden; and the quarries will be open to the Contractors, who will have the power of working as much stone as they require. Besides the ordinary means of conveying away the stone by sea, arrangements have been made with the Railway Company for a branch railway, from the Byker Bridge Station, to the Breakwater, terminating at the end of the Pier, which will afford every convenience for shipping the stone. Mr. LIFFORD, Mr. LOCKE, Mr. STEPHENSON, Mr. BIDDER, and others, have been appointed Engineers to report upon the merits of the Tenders.

Plans, Specifications, and Forms of Tender may be had on application at the Harbour Office, Byker, and all communications and offers may be addressed to the Rev. T. R. GREEN, St. Mary's place, Newcastle-on-Tyne.—Byker, Feb. 5, 1856.

CONTRACT for the SUPPLY of BUILDING MATERIALS for CONVICT PRISONS.—Persons desirous of TENDERING for the SUPPLY of TIMBER, Deals, Slates, Lime, Cement, Lead, Oils, Wrought and Cast Iron, Ironmongery, and other Building Materials required for the Convict Prisons, for twelve months from the 1st of APRIL next to the 31st of MARCH, 1857, for Portsmouth, Millbank, Brixton, Pentonville, Portsmouth, Dartmoor, Chatham, and Parkhurst Prisons, and Surbiton Hospital, Portland, are requested to send, addressed, "Deputy-Surveyor, Portland Prison," their Tenders on or before MONDAY, the 10th day of MARCH next, by 4 o'clock p.m. Forms of Tender may be had on application at the several Prisons, or at the Office of the Directors, 45, Parliament-street, London.

45, Parliament-street, 18th February, 1856.

KIMBERLEY'S NEW PATENT SCAFFOLDING BRACKET entirely supersedes the old and ever-troublesome cords. They are made of cast iron, and require little to no subsequent repairs. They are greatly admired, and require none but very simple, easy, cheap, and little next to no subsequent wear-and-tear. They are to be had of Messrs. PUGH & CO., Ironmongers, Kingsland, London, and of all respectable Ironmongers throughout the kingdom.



London Agents:

Messrs. PUGH & CO. 13, King-street, Snow-hill, London.

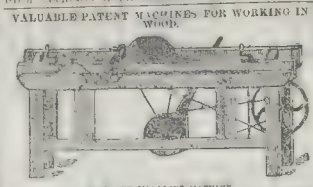
See also KIMBERLEY'S Patent Door Springs, Skylight Screws, Casement Fastenings, Stock Locks, Bench Screws, &c. &c.

MACHINERY.—SAWING, PLANING, and MOULDING.

SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the Kingsland-road, and have added thereto very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they are at all times enabled to execute orders with promptness, and have had the honour of being supplied with many of the largest Machines by the most eminent Engineers and Contractors in the world.

S. W. and Co. beg to state that they confine their attention to this class of machinery, and have had the honour of supplying some of the largest Engineering Companies and Contractors in the world with their Machines for home and foreign use.

TO TIMBER MERCHANTS, BUILDERS, CONTRACTORS, and OTHERS.—TO BE SOLD, a PLANING-MACHINE by Worssam, of Chelsea, nearly new, or would be exchanged for timber, Deals, Battens, or Prepared Flooring Boards. Apply to the Clerk of the Works, Victoria-road, Old Charlton, near Blackheath.



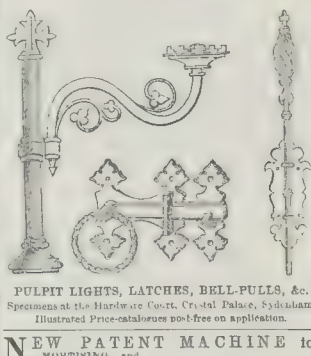
JOHN PARKIN and CO. late BLAKE and PARKIN of NEW MEADOW STEEL WORKS, SHEFFIELD, MANUFACTURERS OF CIRCULAR and MILL SAWS, IMPROVED CAST-STEEL FILES, for the use of engineers and machinists, PATENT TEMPERED MACHINE KNIVES and CUTTERS, moulds, targets for planing, turning wood, &c. &c. and many other articles too numerous to mention. Warranted to work with a harder and finer edge than any other manufacture.

INVENTORS of CAST-AND-ANNEALED CAST STEEL for taps, piston-rods, &c. MANUFACTURERS of RAILWAY SPRINGS, BLISTER, SHEAR, and CAST STEEL, &c.

A HIGH-PRESSURE STEAM-ENGINE, with Saw Frame and 24 in. TIMBER SAWING MACHINERY, WANTED to PURCHASE, new or second hand, in good working order. Address to THOS. MORTON DAVIES, Carpenter, Ipswich.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

SASH AND MOULDING MACHINE.



PRIZE MEDALS have been awarded to these celebrated machines, both at the Great Exhibition in London and many scientific institutions. They are extensively used throughout the United Kingdom, by joiners, cabinet-makers, coach and cabinet makers, railway carriage and waggon builders, machinists, agricultural implement makers, shipbuilders; and by the Royal and Imperial Governments for planing and squaring up, moulding, tenoning, mitreing, grooving, rebating, sawing, and boring. They certainly are the very best of their kind either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.—Sold only by WILLIAM FERNESS, Patentee, 20, Lawton-street, Liverpool, from whom full particulars may be obtained.

HART AND SON,

IRONMONGERS AND MANUFACTURERS,

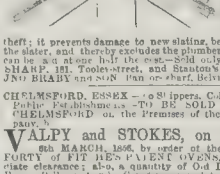
53, 54, 55, & 57, WYCH-STREET, STRAND,

London.

PULPIT LIGHTS, LATCHES, BELL-PULLS, &c.

Specimens at the Hardware Court, Crystal Palace, Sydenham.

Illustrated Price-catalogues post-free on application.



NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinet-makers, and others, doing similar work, are invited to call at the Patentees', LEWIS JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see it in action this very simple, powerful, and expeditious machine, which is the only one yet brought out for performing these three separate kinds of work by the machine; and as it is self feeding, it does not require any skill or care in using, like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery introduced.

SEVERAL YEARS have elapsed since the introduction of WILLIAMS'S PATENT SLATE HIPS and RIDGES. The Agents, from experience, can practically affirm the great superiority they possess over LEAD and beg to remind Architects of the following advantages:—

WILLIAMS'S PATENT RIDGE

is equal in durability to Lead; its appearance surpasses it; it is uninfluenced by the weather; it offers no temptation for theft; it prevents damage to new slating, because it is fixed by the slater, and thereby excludes the plumber from the roof; and can be put at one half the cost.—Sold only by JAS. and JNO. SHARP, 191, Tooley-street, and Stanton's Lower Wharf; and JNO. BRABY and SON, Plan or chart, Belvidere-road, Lambeth.

CHELMSFORD, ESSEX.—To Shippers, Colonists, Schools and Public Establishments.—TO BE SOLD by AUCTION, at CHELMSFORD on the Premises of the Patent Oven Company.

VALPY and STOKES, on THURSDAY, 6th MARCH, 1856, by order of the Proprietors, about FORTY of FIFE'S PATENT OVENS, in lots, for immediate clearance; also, a quantity of Oval Iron, Smiths' Tools, Forge, Bellows, Anvils, Grindstones, and Sundries. These with known, useful and extensively in use, from the No. 1, adapted for family use, where no bread, meat, and vegetables may be cooked for a large family, to the No. 7, which is calculated to cook for 150 persons daily; and they are constructed in a most substantial manner of cast and wrought iron, with the best workmanship. Worthy the attention of shippers and colonists.—Catalogues may be obtained of the Auctioneers, Chelmsford, Essex.

GAS COOKING-STOVES, for large or small establishments.—DEANE, DRAY, and CO., 1, Arthur-street East, London-bridge.

Testimonial respecting the Crystal Palace Kitchen, as fitted by DEANE, DRAY, and CO.

9, Ridgmount-place, Hampstead, March 9th, 1855.

Gentlemen,—I have great pleasure in bearing testimony to the capabilities of your extensive Gas Cooking Apparatus, being the largest and most perfect yet in use. Suitable for hotels mansions, club houses, private houses, and the army. I have cooked in one day, 1,000 fowls and many cwts. of ham, beef, veal, mutton, lamb, tongue, &c.; roasting in one department a baron of beef weighing 23 lbs. in nine hours, fifty-three minutes, presented by J. Barker, esq. Tender, distorted, to the dresser, for the banquet given to the foreign minister. The oven has been in full operation for ten months, and are now in as perfect order as when first finished. They have not cost one shilling for repairs.

I am, Gentlemen, yours respectfully,

EDWARD HORNE.

Messrs. Deane, Dray, and Co.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the grove and fender department of Deane, Dray, and Co.'s establishment, where may also be obtained, gratuitously with prices, or forwarded free by post, DEANE, DRAY, and CO.'s opening to the Monument, London-bridge. Established A.D. 1700.

BUILDINGS HEATED by HOT WATER. G. B. COOPER, IRONWORKS, 191, DRURY-LANE. Ranges, Hot Plates, Gas and Coal Grates, Hobs, &c. Ornamental and Constructive Ironwork.

HEATING BY  HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description and of the most extensive dimensions, can be effectually warmed by Hot Water. JOHN WEEKS and Co. can give numerous references to Churches, Hospitals, Houses, Warehouses, &c. &c. where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

CAST STEEL.—Messrs. NAYLOR, VICKERS, and CO. RIVER DON WORKS, SHEFFIELD, are now prepared to execute orders for CAST STEEL RODS, from 3 lbs. to 5,000 lbs. each, Locomotive Crank Axles, Tyre Bars without welding, Plate, Crank Axles, and every description of heavy forgings in Steel, to pattern.—For further particulars, apply as above.

GASELIERS in GLASS and METAL.—The increased and increasing use of Gas in private houses has induced WILLIAM BURTON to collect from the various manufacturers all that is new and choice in Brackets, Pendants, and Chandeliers, and put to office passages, and the other rooms, as well as to have designed expressly for him; these are ON SHOW over his SIXTEEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionable with those which have tended to make his Establishment the largest and most remarkable in the Kingdom.—39, Newman-street, corner of Perry's-place.

THE BEST SHOW of IRON BEDSTEADS in the KINGDOM is WILLIAM S. BURTON'S. He has FOUR LARGE ROOMS devoted to the EXCLUSIVE SHOW of Iron and Brass Bedsteads and Children's Cots, with appropriate Bedding and Mattresses. Iron Bedsteads, from 10s.; Portable Folding Bedsteads, from 12s. 6d.; Patent Iron Bedsteads, with all the latest improvements, from 2l. 7s. 6d. to 15l. 15s.

The alterations and additions to these extensive premises (already by far the largest in Europe), which occupied the whole of last year, are of such a character that the entire of EIGHT HOUSES, as shown in the Plan of the Ground, are now one magnificent SUITE of GENERAL HOUSE FURNISHING APARTMENTS, Bed, Bath, Table, Kitchen, Furniture, Glass, Lamps, Clocks, Britannia Metal Goods, Baths, Fenders, Fire-irons, Lamps and Gasseliers, Iron and Brass Bedsteads, and Bedding, so arranged in Sixteen Large Show-rooms, as to afford purchasers an unusual facility in the selection of goods that cannot be hoped for elsewhere.

Illustrated Catalogues sent (per post) free.

39, NEWMAN-STREET; 4, PERRY'S-PLACE, and 1, and 2, NEWMAN-STREET; and 4, 5, and 6, PERRY'S-PLACE. Established 1820.

SAW-MILL TO BE SOLD, nearly new, and in excellent working order. A good frame, capable of cutting 22 in. feed, and a 7-cwt. frame capable of cutting 5 ft. log 40 feet long and 2 feet square, by one of the best makers.—For particulars, apply to Mr. HORN, 14, Whitechapel, London.

A
FIRST-CLASS MEDAL
WAS AWARDED TO
F. EDWARDS, SON, and CO.
AT THE
PARIS EXHIBITION,
For the SPECIMENS they exhibited of
DR. ARNOTT'S
SMOKE-CONSUMING GRATE,
AND SMOKE-CONSUMING
COOKING APPARATUS.

F. EDWARDS, SON, and CO. beg to inform the public that their STOCK of GRATES is ENTIRELY REFORMED, and consists SOLELY of GRATES on the SMOKE CONSUMING PRINCIPLE. A large variety in real Bronze, Ormolu, Steel, and Berlin Black; suitable for Drawing rooms, Dining-rooms, and Libraries, from 7l. to 50l.

The following are the prices of those for ordinary use:—

For Bed-rooms, Offices, &c.				For Sitting-rooms, Parlours, Bed-rooms, Offices, &c.			
1 foot 7 inches wide, 12-inch fire	£3	10	0	2 feet wide and under	£4	0	0
1 foot 9 inches wide, 14-inch fire	3	12	6	Above 2 feet wide, and not exceeding 3 feet 6 inches	4	10	0
The above Grates can be increased in width to that of any fire-place by iron or slate slips; iron slips supplied at 6d. per inch.				,, 3 feet ,,	5	0	0
				,, 3 feet 6 inches ,,	5	10	0

By the Grates on this principle, as properly constructed by F. Edwards, Son, and Co. smoky chimneys are avoided, an agreeable fire is maintained, with one-half the trouble attending the ordinary grate, and a saving of from forty to fifty per cent. is effected in the consumption of fuel.

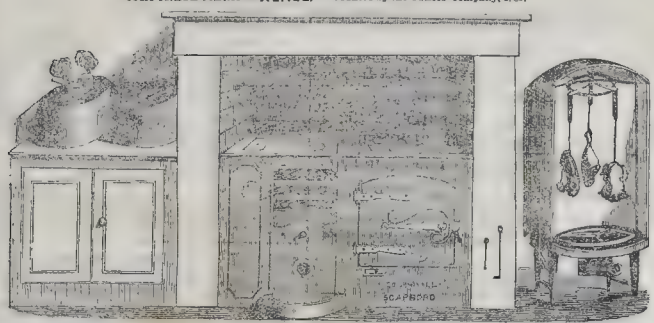
PROSPECTUSES, WITH FULL PARTICULARS AND TESTIMONIALS, SENT ON APPLICATION.

To be seen in daily operation at the Show Rooms, 42, Poland-street, Oxford-street, London.

DR. ARNOTT'S SMOKELESS GRATES,

For the manufacture of which D. and E. BAILEY obtained the SILVER MEDAL at the PARIS EXHIBITION. The above excellent invention has been carefully modelled and manufactured by D. and E. BAILEY, 272, Holborn, who having experienced great difficulty in keeping pace with the increased demand for the above Stoves, have now made such arrangements as will enable them to supply their customers with the Smokeless Grates, of ordinary dimensions, from their stock on hand, which consists of various designs in black, bright, and polished steel, richly decorated with ormolu ornaments.

The great advantages of these Stoves over all others are—



1st. The entire absence of smoke.
2nd. An immense saving in fuel.
3rd. A cheerful fire, with simple means for regulating the heat.
4th. Will burn night and day, requiring only to be supplied with fuel twice in twenty-four hours.

For invalids' bed-rooms, these stoves will be found invaluable.

Prices and Prospectuses may be obtained on application where the Smokeless Grates may be seen in daily use.

D. & E. BAILEY, IRONMONGERS,
272, HOLBORN, LONDON.

PARKIN AND MARSHALL,
GENERAL MERCHANTS, AND MANUFACTURERS OF
TABLE CUTLERY, PEN and POCKET KNIVES, SCISSORS, RAZORS, ELECTRO-PLATED WARES, FILES, SAWS, EDGE and JOINERS' TOOLS, AUGURS, STEEL, &c. &c.
TELEGRAPH WORKS, SHEFFIELD.
OFFICES—{NEW YORK—71, JOHN-STREET / BOSTON—35, KILBY-STREET. U.S.
MELBOURNE—94, COLLINS-STREET EAST.
CORPORATE MARK XLALL.—Granted by the Cutlers' Company, 1789.

Messrs. PARKIN and MARSHALL have also pleasure in stating that they are appointed Sole Wholesale Agents for the Sale of the undernamed Articles, manufactured by Mr. ENOCH OLDFIELD TINDALL, Iron Works, Scarborough, viz.:—TINDALL'S PATENT PORTABLE MANGLES, WASHING AND WRINGING MACHINES, NAPKIN PRESSES, COOKING RANGES, LAUNDRY STOVES, SANATORY TRAP AND GRATE, CHAFF CUTTERS, OAT, BARLEY, MALT, AND LINSEED MILLS, BEAN MILLS, OILCAKE BREAKERS, PORTABLE SAW-MILLS, TURNIP CUTTERS, &c.

THE PATENT COOKING RANGES AND ROASTERS are now amongst the most complete and inexpensive before the Public, and are selling all over the north quarter of our country.

THE IMPROVED LAUNDRY STOVE will heat Fifteen Flats at once, occupies only 12 inches in space, is removeable from one room to another and will be found invaluable in Public Hospitals, Infirmaries, Laundries, and Private Families.

E. O. T.'S SANATORY GRATE AND TRAP is now acknowledged to be the best and most secure from effluvia as well as not being liable to choke, as it really is cleaned that has been introduced.

THE MANGLES AND WRINGING MACHINES have been introduced into the Royal Household, most of the Public Laundries, and upwards of a thousand Private Families, as clear testimony to their efficiency and superiority over all others.

THE OAT BRUISERS AND CHAFF CUTTERS, like the above, combine cheapness with the greatest simplicity of construction, and only need to be tried to be appreciated. They effect great saving, and should be in every stable.

Drawings of Mangles, &c. with Testimonials, can be had on application at Telegraph Works, Sheffield, or of the Retail Agents, who are appointed in almost every principal Town in the United Kingdom.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person. 5th. From its lightness, weighing only about 3½ lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, slate, or tiles, it is a most effective non-conductor.

INDORUOUS FELT, for damp walls and for damp floors, under carpets and floor cloth.—PRICE ONE PENNY per Square Foot.
CROGGON and CO.'S PATENT FELTED SHEATHING, for covering the bottoms of boats, &c. and
DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

'ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

TYERMAN'S PATENT HOOP-IRON BOND FOR BUILDING PURPOSES.

TARIFF OF PRICES
Beyond the current Price of Hoop-iron.

The undermentioned Gauges are kept in stock; but any Gauge or width will be supplied within a few days, at a small advance on the following prices:—

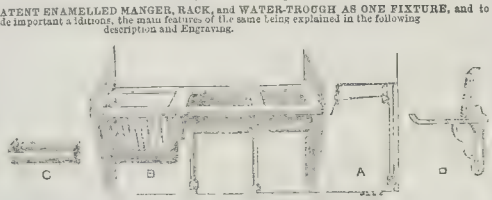
Gauge.	In. wide.	Per 1,000 ft.
No. 16 ..	1¼ ..	7s. 0d.
15 ..	1½ ..	7s. 6d.
15 ..	1¾ ..	8s. 0d.
15 ..	..	8s. 6d.
15 ..	..	9s. 0d.

Plan and Elevation of Bond, showing Position and Form of the Claws.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 11¼ inches on both sides alternately, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming reversed claws, which are so bent, that a direct end grain of the iron is presented longitudinally, offering most powerful and effectual resistance, and which become, when built into the brickwork, embedded in the structure, preventing the possibility of longitudinal escape, and a complete and permanent bonding together of the whole building is thereby obtained.

Patentee—FREDERICK TYERMAN, Architect, 44, Weymouth-street.

Sole Manufacturers—THOMAS PERRY and SONS, Government Contractors, Bilston.



London Depôt—463, OXFORD-STREET.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

PARIS EXHIBITION AWARD TO

COTTAM and HALLEN, of Winsley-street,

The original Inventors of the PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, and to which they have made important additions, the main features of the same being explained in the following description and Engraving.

A represents the Patent Haller-guide and Collar-rein, the ball of which is taken to the back of the manger-works with freedom and ease up or down the guide-bar, and is noiseless in its operation, as also a sure preventative against the most restive horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, or mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed-box detached, made of galvanized sheet-iron, light and durable.

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM'S MANGERS are constructed on the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers; Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Preserving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

The New Illustrated Catalogue for 1856 gratis on application. Estimates and Designs.

Three ft. three in.....	7 0
Three ft. six in.	7 15
Three ft. nine in.....	9 0
Four ft.	10 10
Four ft. six in.....	12 12
Five ft.	14 14

Coverings, 7s. per foot.
Fixing, 5s. per foot.

The valuable KITCHEN RANGE, the Manufacturer has much gratification in stating, has been in use several years, and given the utmost satisfaction. It may be used either with the fire open or closed, thereby avoiding the chimney so naturally felt against having the fire at all times shut up, which is well known to generate a close unwholesome vapour.

The Prize Medal and Honourable Mention was awarded to this Range at the Great Exhibition of 1851.

To be seen in operation at the Manufacturer's.

J. SHERWIN, 68, TABERNACLE-WALK, FINSBURY.

Castings of every description in Loam or Sand.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

4½d. | 5d. | 7d. | 9d. | 1s. per knot.

6-inch Ribbed Ward Mortise, with Best Furniture and Patent Spindles, 3s. 6d. each. Light Elliptic and Register Metal, 14s. per cwt.

Dr. Arnott's Ventilators, 4s. 6d. each.

An extensive Stock of Bar, rod, hoop, and sheet iron.

Brick Moulds kept in stock. Any size made to order.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

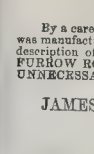
January 1, 1855.

THE SEVRES GLASS COMPANY.

LEGENDRE, TURPIN, AND CLARK'S

Establishment for the supply of Crystal White Sheet Glass, First, Second, and Third Quality, Window Glass, Shades, Potiche, Lamp Glasses, Bottles, and other Articles in White Glass, at

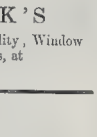
131, UPPER THAMES-STREET.—WORKS: SEVRES, NEAR PARIS.



ARCHITECTURAL AND ORNAMENTAL DECORATIONS.

Architects and the Trade are respectfully invited to inspect specimens of the

PATENT VITREOUS MARBLES AND CONSOLIDATED GLASS,



Applicable for Piers, Pilasters, Chimney-pieces, Shop Facias, Table tops, Panels, &c &c

Show-rooms, 46, Broad-street-buildings, City; 4, Russell-place, Fitzroy square, 112, New-street, Birmingham, &c. &c.

SANDS AND EMERY,

CURSITOR-STREET, CHANCERY-LANE.

MANUFACTURED JOINERS' WORK AND MOULDINGS OF EVERY DESCRIPTION ON THE SHORTEST NOTICE, AND AT THE LOWEST PRICES, PACKED AND FORWARDED TO ALL PARTS OF THE COUNTRY.

Lists of Prices and Estimates forwarded on application.

CHARLES WM. WATERLOW AND CO.

MANUFACTURING JOINERS,

121, BUNHILL-ROW, FINSBURY, AND BOW, MIDDLESEX.

N.B.—ORDERS RECEIVED AT THE COUNTING-HOUSE, 121, BUNHILL-ROW, ONLY.

THE NEW PATENT

INTERLOCKING CURVILINEAR REVOLVING IRON SHUTTER

IS GREATLY SUPERIOR TO ALL OTHERS FOR

LIGHTNESS, STRENGTH, SECURITY, DURABILITY, AND EASE,

AND ALSO MUCH CHEAPER.

MANUFACTURED BY

BUNNETT AND CO. ENGINEERS, FOUNDERS, &c.

ORIGINAL PATENTEES OF REVOLVING IRON SHUTTERS, No. 26, LOMBARD-STREET, LONDON; and DEPTFORD, KENT.

The edges of each lath are accurately turned by powerful PATENTED MACHINERY, and slide end-ways into each other, FORMING A COMPLETE HINGE THROUGHOUT, interlocking so effectually that no force can separate them; and if made of the best galvanized iron, are almost indestructible.

A CHEAPER MODIFICATION FOR WAREHOUSES, COTTAGES, PORTABLE BUILDINGS, &c.

ALSO FOR EXPORTATION.

PATENTEES OF METAL SASH-BARS AND MOULDINGS.

Descriptive Illustrated Prospectuses and all necessary information forwarded on application.

SNOXELL'S

PATENT REVOLVING WOOD AND IRON SHUTTERS,

WITHOUT MACHINERY,

96, REGENT-STREET, AND AT HIS STEAM WORKS, 135, OLD-STREET.

Testimonials from Architects, Bankers, &c. of their security and durability, forwarded.

MANUFACTURER OF METALLIC DRAWN SASH-BARS, STALL-BOARD PLATES, &c.

CHEAP AND DURABLE ROOFING.

By Her Majesty's  Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and Sole Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national exhibitions it has been exhibited, and OBTAINED THE PRIZE. Having the best and cheapest article for roofing; also used for under-lining it is superior to felted sheeting, and lasts double the time. Its advantages are lightness, warmth, durability, and economy of carriage, with CERTIFICATES, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have erected the above, and speak most highly of it. The Felt can be cut to any length, in 9-inches wide, and is sold at 2d. per square foot. Samples, with full directions as to its use, and the manner of forwarding orders, and forms for the same, sent free on application. A Prize Felt, for covering Rafters, &c. is also manufactured, in white, 3 inches wide, at 1d. per foot. The TRADE are invited to send for their orders for the above Felt at the FACTORY, as it is the only process of the kind which will be supplied to the trade. Also for roofing is made the F. McNEILL and CO.'s Manufactured LAMB'S BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt, buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

PLATE-GLASS.—Builders can be supplied with PLATE-GLASS of any size AT VERY REDUCED PRICES, upon application to the SOHO PLATE-GLASS COMPANY, 58, Soho-square.

SUPERIOR BRITISH PLATE-GLASS AT VERY LOW RATES

THE UNION PLATE-GLASS COMPANY having recently completed very considerable improvements and additions in their works, take the opportunity of informing their friends that they are now fully prepared to execute orders without delay; and respectfully solicit the attention of the trade generally to the low rates at which their now much-esteemed manufacture is sold.

Lists of prices may be obtained on application at
The Works, Pocket Nook, St. Helen's, Lancashire.
The Warehouse, 19, Bread-street, London.
" 45, Piccadilly, Manchester.
Messrs. G. and J. Malloch, 30, Turner's-court, Glasgow.
" John Dix and Co. Bath-street, Bristol.
" H. Sibthorpe and Son, Cork-hill, Dublin.

ROUGH PLATE-GLASS from 1-8th to 1-4th thick, suitable for the windows and roofs of halls, mechanics' shops, market halls, railway stations, &c.

Beautiful ground and POLISHED PLATE GLASS, for shop-fronts and sashes, of the best possible quality, and silvering. Superior silvered Looking-glass Mirrors of all sizes.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to their LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for framing, of unrivalled quality and Lead, ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for home or other decoration. All applications for estimates and lists of prices to be made at their warerooms, 310, OXFORD-STREET.

CRYSTAL SHEET GLASS, first, second, and third quality, in cases about 20 feet each, suitable for pictures and larger purposes, from 31 to 41 per 100 ft. Belgian sheet glass, in cases about 50 feet each, 4, 5, 6, 7, 8, 9, 10, 11, 12 inches, and 1 square, in 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36 inches, and 1 square, up to 23 by 14, 24 by 16, 25 by 17, 26 by 18, 27 by 19, 28 by 20, 29 by 21, 30 by 22, 31 by 23, 32 by 24, 33 by 25, 34 by 26, 35 by 27, 36 by 28,

"	X.	" the Moors	5 "				109
"	XI.	Ornaments from Persian MSS.	5 "				
			48				

The Author will endeavour in the several chapters to define the apparent origin and trace the development of the several styles of Ornament. He will proceed to ascertain the laws which govern the composition of each style, and those which are peculiar to each. He will further attempt in the 24th chapter to show how, bearing in mind those general laws which have influenced all periods, we may yet go forward; and, whilst availing ourselves of the experience of all time, may be enabled to produce results in harmony with our own times instead of blindly following in the footsteps of the past.

The collection of the vast amount of material has been the labour of many years. On the eve of giving it forth to the world the Author fully feels the difficulty of the task he has undertaken; he trusts, nevertheless that with the co-operation of artists, and all others engaged in any way with the decorative arts, will have before them an amount of material which does not elsewhere exist in any such convenient form, and in the use of which it will be his endeavour to serve them as a guide.

N.B. The Letterpress will appear at intervals during the progress of the Work. Size, 8vo. royal.

Published by DAY and SON, LITHOGRAPHERS to the QUEEN, 6, GATE-STREET, LINCOLN'S-INN-FIELDS.

PAPER and PAPER-MAKING, Ancient and Modern.

By RICHARD HERRING.

With an Introduction by the Rev. GEORGE CROLY, LL.D.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

The Builder.

VOL. XIV.—No. 681.

IT is desirable that the various building materials and appliances which form part of the Architectural Exhibition, in Suffolk-street, now about to close, should not have been brought together in vain, but that those engaged in building should remember what they have seen, and inquire of themselves, when opportunities occur, if they cannot introduce this or that improvement, or avail themselves of this or that material. How many of us gaze upon an improvement, admit its excellence, and then forthwith, as if we had never seen it, proceed to work on the old plan.

The evening of Tuesday, the 19th, was set apart at Suffolk-street to give attention to these contributions,—the committee duly appreciating their importance. Mr. Tite had undertaken to make some remarks upon them, but being prevented by Parliamentary duties, Mr. Edmeston, jun. the honorary secretary, took his place, and after two or three preliminary observations, thus proceeded:—

The time and earnest thought expended upon many a design, of even an indifferent character —the labour bestowed, the knowledge necessary, the never-ending education required in the architect—are only, after all, one portion—one small section, of the influences at work to produce a result for you, the Public, Employer, Patron; and it is unquestionably of most vital importance, if there is ever to be a high and universal expression of architectural art in this country, that all this should be understood and appreciated; if ever the day is to arrive when excellence is to be looked for, not only in a few isolated instances,—public buildings, perhaps, and the like, or extraordinary and unusual efforts, but in small streets and cottages, and out-of-the-way places, so that care, propriety, and a thoughtful mind shall be the rule, and not the exception.

Mr. Petit observed in his lecture that the bird, the bee, and the beaver, all in their way occupy a higher position than the human architect in point of wonderful ingenuity, and adaptation in their structures; but he pointed out how the efforts of human genius had higher purposes,—a further and higher development of certain noble faculties of mind, in designer and spectator.

In all our lectures thus far it is these higher principles that have been chiefly considered; and we have now to see that there is yet another class of workers in the great cause, who silently, with but little outward ostentation, and with but little or no share in the final result, are, year by year, untiringly applying money, ingenuity, and skill to assist; and it will have done well to inquire into and investigate the principles and design of the completed work, it will be as well, and it is as important, that you should be as fully sensible of all the less apparent efforts which, in their way, are as worthy of study and attention.

It was well that we began with the higher matter, but we cannot have a more appropriate subject for consideration at this our last meeting for the season, than practical evidences like these of what may be done in some of the subsidiary branches of building operation; and some little explanation of the means employed in different cases must tend to increase our respect for the enterprise, talent, and industry of the inventors. Nor let it be supposed that this subject is one in which the public at large have little interest, or one exclusively for the architect's attention only. Why should it be left to the architect to suggest, in every case, the application of this or that new material or contrivance? Why not, while you desire the best design he can give, request him also to apply the newest contrivances, to employ the most suitable materials, even if the house you build is not exactly like all the other houses in the street, and in spite of the kind remarks on your wild vagaries in which your neighbours may indulge? Not only is there often a cold encouragement for such inventions, but there is often an absolute prohibition; and the architect, if he dare step out of the beaten path, is liable to reprehension for jeopardizing the name, the reputation, or mental capacity of his client, or of lowering the value of his property. It is in this, as in other things: let there be a demand for the exercise of good taste and sound principles, and a proper contempt for their deficiency, and that demand will be met. Refuse to accept inefficiency, and there will be no need to prop up ability and professional standing with extraneous aids; and in like manner learn to believe that bricks and mortar, and cement, four-panel deal doors and ceiling cornices, are not all that is necessary to an ordinary work of domestic architecture, and you will have new materials and applications provided for you,—new additions to your comforts and daily enjoyment of living,—you will open the door to a host of inventions and improvements ready and desirous to expand themselves in your behalf, and you will confer a benefit on your age and country, as well as on thousands of intelligent labourers in this great city, and you will besides do somewhat towards getting rid of constructions that will not stand, walls that will settle, and bare and counterfeit productions of all kinds, that are only provided because you will have them, live in them, or buy them.

The several contributions we have to consider class themselves pretty readily under three or four heads; and it will simplify our inquiries if we proceed at once to this division of our subject; and first we may instance what may be called "new material;"—for example, the productions of the Indurated Stone Company, the injected stone by Barrett's patent, the Tamworth bricks, those from the Poole Company, the iron slag, hose applied to pipe uses, the serpentine, and the artificial stones and terra-cottas: all these are either new as building materials, or, not being new, are in so new a form as to be entitled to be considered in that light. We may then examine the contrivances of mechanical ingenuity or construction,—the productions with which utility in its simplest sense has more to do than art; and then those contributions which are complete in themselves, like the beautiful decorations of M. Remon, in the elaborate chimney-piece contributed by Mr. Collmann.

First, then, the new materials. Perhaps nothing comes so distinctly under this head as the transformation of sand, loam, or chalk, into hard and endurable stone, by the Tunbridge Company; and the other process of Messrs. Barrett, by which a soft stone becomes hard as marble, and capable of receiving a polish.

The Tunbridge Company indurate any soft stone by soaking it in a solution of chemically-prepared gas tar and resin; and they had several specimens so prepared in our last Exhibition. Since then, however, they have extended their patent to preparing an artificially-compressed stone: thus sand, loam, gravel, being thoroughly dried and mixed with the solution upon a hot-plate, all ready for use, may be pressed into the mould, and in half an hour the bracket, moulding, piece of ornament, or whatever it may be, is complete, and formed in a hard stone.

Messrs. Barrett's process is similar in some respects, sulphur or some bituminous solution being employed in the same way, and injected by exhaustion of air. The stone is then rubbed like marble, and afterwards polished; and the advantages are an increase of strength and durability. And of equal interest is the artificial stone of Messrs. Ransome, which is made from grains of sand, limestone, marble, or of any similar material, and which becomes an indissoluble, impervious mass, when cemented together by what is in fact a solution of glass, after exposure in a kiln. The solution is made of flint, dissolved in a caustic alkali (soda or potash), at a much higher temperature, in close boilers or cylinders: when mixed with the particles alluded to, it is moulded, dried and burnt to a red heat, and the material has the advantage of contracting hardly at all in the drying. In striking contrast with this is the stone manufactured by Mr. Austin, composed of a strong cement, mixed with powdered stone or grit, and suffered to dry without the assistance of heat. This material has been proved to be of the most lasting character, if sufficient time is allowed in the preparation. As the whole is carefully prepared by hand, and as it is not subject to the contraction or alteration of form in the burning to which terra-cotta is liable, it has in that respect the advantage; and in some descriptions of work it is not a slight one.

Then we have the burnt clays of Mr. Pulham and the Farnley Company: in these the fresh clay is mixed with grit, and then burnt at a great heat; and some of Mr. Pulham's specimens are granulated with a view to obtain a closer imitation of stone; and besides the ornamental uses of this material, it may be applied to steps, paving, floors, &c. The glazed and coloured bricks of the Poole Company are composed of a finer clay still, as a degree of heat is required for glazing which would melt a clay of a common character. The manufacturers lay much stress upon the value of the glaze, but I would suggest that for almost all purposes, except, indeed, when absolutely immersed in water, the unglazed tiles or bricks are most available for architectural purposes.

Nor need the Poole Company consider it an additional recommendation to their excellent material, to say that their bricks are made to resemble stone, or may be marbled, after all that has been said and written these few years past about truthfulness in material and propriety of application. Let the bricks be bricks, and neither stone nor marble, and the company will find that the article will become of infinitely more extended use. A study of the design by Mr. Chamberlain, of Birmingham, Mr. Gray, of Buckingham-street, and others in the exhibition, will show that bricks are wanted to look like themselves, and that they may be used much better and more easily in that way than if made to imitate marble or stone, which they never can do, if their necessary use in small pieces were the only obstacle.

In those artificial stone productions, also, where the forms are obtained by compression in a mould, an imitation of carved stonework would appear inadvisable, since there can be no under-cutting in relief, and a result is obtained which in really carved work would not be tolerated. On the other hand, the font of the Farnley Company looks precisely as if it was copied from a framed work of wood: it cannot but occasion regret if we feel that the care and ingenuity expended are guided by wrong canons of taste, and have found a wrong direction, particularly where the things themselves are so excellent. Let it be remembered in the matter of ornament also, that too little is in every case better than too much; and to quote Mr. Fergusson's admirable Handbook of Architecture, — "All materials are nearly equally good when used honestly, and for the purpose for which they are best adapted, and all become bad either when used for a purpose for which they are not appropriate, or when one material is used in the place of another." Form should always be the clue by which bodies and their properties should be known,—a rule illustrated all through the kingdom of nature; for as Mr. Digby Wyatt observes, "Never does a flower look like a piece of metal, or a piece of timber like a rock."

The bricks from Mr. Arnold of Tamworth, are chiefly noticeable for hardness and great strength: for paving, curbs, and such purposes they would appear valuable additions to similar materials; but the colour of the specimens would appear to interdict their use ornamentally. The inventor, however, advertises the material in blue, red, or strawberry colour; and I am told that Mr. Arnold is making chimney, and if so, there must be a class of goods of firmer texture than we have seen. The cost of production is moderate, and the machinery may produce any number of patterns, as a change of dies is all the alteration necessary.

The material brought again into notice by the Lizard Serpentine Company, is of great beauty, and deserving much attention, and is now to be had in large blocks, of 10 or 12 feet in length.

The upper strata of the serpentine rocks are found to be brittle and unsound, and the energies of this company have been directed to procuring the stone from a considerable depth, where the defects apparently nearer the surface disappear.

This stone is used in the external walling, at the Lizard, in a rough state, where it has stood the test of climate for some centuries. Nor was it unknown nearer home, though it seems to have got into disuse after the early part of the last century. We find the serpentine introduced in a chimneypiece, in Hampton Court Palace, of a dark green colour, and the polish more perfect than the contiguous marble. I must allude to a most interesting set of contributions from Messrs. Chance, of Birmingham, which were sent to these galleries, and afterwards withdrawn in consequence of the discovery of great improvements in the production. The invention consisted in melting a basaltic stone, similar to that of the Giant's Causeway, and running it into moulds; and it was found that the stone could be made to take in this way any required form. The rapid cooling, however, at first allowed, converted the material into a species of slag, but it was soon discovered that a slower process left the character of the stone unchanged, and it has been applied to the ornamentation of houses in some instances already. The chief objection was the colour, opaque and black almost, and which rendered painting necessary; and it was, I believe, in consequence of some process by which a pleasant and agreeable tint could be given, that the specimens were withdrawn.

Messrs. Waithman's hose piping is undoubtedly a new application. It is for purposes similar to the leather hose, with which we are all acquainted, but is not half the price, and is, besides, lighter and less bulky, the best quality of 2-inch hose costing only 2s. per yard. Not only for ships, fire-engines, and out-of-door purposes, is this hose applicable, but also for building purposes and for some others, for which its adaptability might certainly have been overlooked. Thus, it has been used in the application of paint or colour to the front of a house in this way:—a reservoir of the paint or colour is set on the parapet, and the workman uses a hollow brush connected therewith, by means of a length of the half-inch hose; and the consequence is, that he works away with a never-ceasing supply; and if he stays to look about him, we may imagine he will very speedily make a mess of it. The same thing has been done by connecting with the nearest water supply a similarly-made brush — a mop, for carriage-washing—by which there is a constant supply of water, and the sand or grit is continually driven out of the mop, and the carriage is thoroughly washed, and not scratched. I have not heard that the domestic scrubbing-brush has been fitted with this article, but it would be, I dare say, equally easy.

Mr. Magnus's enamelled slate, and Mr. Minton's tiles, are of such acknowledged excellence that it appears unnecessary to make any observations upon them. I believe the process by which the slate is enamelled is a secret: the colour is, however, applied by a great heat, and becomes permanent.

Mr. Minton's inlaid encaustic tiles are a species of mosaic, the pattern being inlaid with clay: his Venetian tiles are made from powdered and coloured clays compressed in metal dies: the pieces are cemented together at the back, and the indented tiles, covered with enamels in different colours.

The iron slag, melted again and turned into moulds, deserves consideration.

Among the contrivances of mechanical ingenuity, there are, perhaps, none marked with a more common-sense adaptation than those by Mr. Jennings, Mr. Botten, Mr. Pierce, Mr. Chappuis, Mr. Moore, and Messrs. Bunnett.

Mr. Jennings's improvement upon the ordinary drain-pipe, by which the pipe can be got at without disturbance, and junctions can be effected, as also his cistern-valve and gully-trap, are excellent, and, like all simple and good things, occasion surprise that they were never thought of before; and, indeed, there is hardly any contribution from this exhibitor without evidence of thought and care, and well deserving attention—especially the sanitary contrivances.* Almost as much may be said of Mr. Botten's contributions, and especially of Underhay's Patent Regulator. Upon similar grounds, Messrs. Bunnett's contributions are worthy of all praise, as are also those of Mr. Moore. Messrs. Bunnett's revolving iron shutter has the peculiarity of rolling either way; that is, it may be shut down either inside or out. The shutter is an example of the assistance afforded by powerful and accurate machinery, which turns up the edge of each slip of iron with such accuracy that when slid endways into each other, a perfect hinge throughout the entire length is formed, working quite smooth and easy; and the pieces of iron are at the same time interlocked so effectually, that the laths will rend across the centre rather than separate.

No exhibitor has come forward more boldly to challenge criticism than Mr. Pierce; and whether we take his small stoves at 11s. 6d. or those of a larger character, they are equally good, and deserving of commendation. They are all upon the principle of using fire-brick lumps as the medium for conducting the heat of the fire, and to warm the fresh air for consumption, instead of using an iron surface, which also warms the air in the room without keeping up any supply of fresh warmed air, so desirable and conducive to health, and which also, by creating what is called a plenum effect, assists to prevent draughts. Mr. Magnus's stove is similar to Mr. Pierce's in principle, but he employs no iron at all, not even for the outer casing, using instead the enamelled slate, which, perhaps, gives him somewhat the advantage, so far as appearance is concerned.

So long as Mr. Pierce confines himself to the common-sense utility of his inventions, we can applaud and admire his industry and talent, but is there not apparent a want of right guidance where the article is made to leave its simplest form, and to receive some moulding for artistic effect? We may give an unqualified and unquestioning approval to the cheap portable oven, sold for 15s. and which strikes us as being as good as it is cheap; while the handsome grate in its margin of alabaster, with its vases and shield, and the iron chimney-piece in the other room, copied from one in stone, in spite of all the labour bestowed upon them, excite a feeling not precisely a pleasurable or satisfactory one. How is this? Is it the absence of that utilitarian feeling enlarged upon by Mr. Petit in his lecture,—a forgetfulness of the maxim he laid down, that "original purposes must not be overlooked in the slightest degree."

There is perhaps no class of manufacture so much in want of improvement in design as the ordinary stoves in common use.

M. Chappuis's daylight reflectors are well known to be devised upon sound principles, and to answer their purpose. The recent improvements consist in silver-plated surfaces, instead of using leaf silver for this purpose; and the use of metal, instead of glass, for the silvering, is another improvement. Some of the reflectors exhibited are also contrived to obviate the dazzling effect of refracted light, by filling the reflecting surface with numberless concavities and convexities, so as to soften the light, and diffuse it at different angles. In the gas reflectors, the former mode of using copper plated surfaces is done away with, and a combination of crystal with silver-plated copper is used in such a manner as to exclude air from the silvered surface, and at the same time permit the glass to expand when heated. Many thousands of these useful articles have been sold within the last three or four years, and a great addition to comfort obtained in numberless instances. I hope, however, we shall never see any new buildings designed with so little regard to the exigences of situation as to render any such assistance necessary. A reference to the elevation of some houses erected at Maidstone, in Messrs. Ashpitel and Whichcord's large drawing; or to Mr. Waterhouse's building at Manchester (63), will show that it is perfectly easy to do away with all obstructions to light. The merits of Mr. Tyerman's hoop-band are so evident, and the additional cost is so nominal, that I should think no one would ever use any of the old bond, which, as frequently applied, might as well be omitted altogether.

Before we examine the artistic productions complete in themselves, there is a class of contributions which comes half-way between these and those last alluded to,—things complete as far as they can be, independent of their final situation.

Thus Mr. Leake contributes some specimens of leather hangings, in use among the ancient Egyptians—for I believe there is a specimen of embossed leather of 900 B.C. in the British Museum, and which was very prevalent in the two last centuries, though not then treated exactly as now. The mode then adopted was to prepare the leather by hand, and without machinery, pressing into moulds, so as to give the required form, with small wooden tools, which, when dry, was coated over with silver leaf, and then lacquered to produce a gold colour. Now, however, science steps in, and, with the assistance of steam to soften the leather, metal moulds to receive it, and hydraulic pressure, we get not only the patterns suitable for hanging, but also cornices, brackets, and other wooden and stone forms, into which the leather is forced,—a species of application which our forefathers were saved, for want of knowing better. Messrs. Jackson's most excellent productions in papier-maché are somewhat akin to the leather manufactures, and are of great perfection as to workmanship. I understand the large figure is similar to some that have been put up in St. George's Hall, at Liverpool; and it may perhaps be asked, how is the doctrine of truthfulness and honesty, so much insisted on, to be applied to productions so meritorious in themselves as these? are such in all cases to be rejected? By no means. And —speaking altogether in ignorance as to how or in what part of St. George's Hall the figure exhibited is used—if I say that, in such a building, to my mind, the introduction of such a figure in such a material is inapplicable and dishonest,—since the character of the building would lead a spectator to believe that stone or marble only would be used, and would be suitable, perhaps,—I illustrate the distinction as clearly as I can,—while at the same time there are thousands of situations where an imitation of statuary, in a subordinate composition, would be perfectly legitimate, as the reality of the imitation would never be suspected, could never be questioned, and would please and satisfy the eye by reminding of the original type. And something of this would apply to Mr. Kershaw's imitations of woods and marbles, which are so very beautiful, that one is led to suspect that they would cost as much to produce as a veneer of the real material.

To pass on to the excellent productions in glass mosaic, by Mr. Stevens. We have heard already from Mr. Fergusson, how the Assyrians used a mosaic composed of clay cones, three or four inches long, coloured, and let into a plaster ground, — which ground played an important part in the effect produced; — and we have heard from Mr. Scharf a description of the Roman mosaic, where the whole pattern is made of very small pieces, in opposition to the Florentine method, in which were used pieces as large as could be got with convenience. These mosaics were formed of gems, marbles, or coloured stones, inlaid in a slab of marble; but there is also a Roman mosaic of glass, in which, a flat rigid surface being prepared and overlaid with plaster, the pattern is drawn upon the plaster, and the small spaces being scooped out, one by one, are filled in with cement, and the tesseræ of glass, or porcelain, are pressed in. Mr. Stevens's process is somewhat analogous; but he uses glass altogether, and as geometric patterns only are used, there is much less expense. Mr. Stevens, however, although he has not gone beyond this method hitherto, is quite willing to work out any more complicated designs as are found in ancient specimens; and it is, perhaps, surprising that so excellent, lasting, and tasteful a method of decoration is not applied more generally. At the church of All Saints, Notting-hill, erected under the able superintendence of Mr. W. White, the mosaic is

* We would add a strong expression of our own good opinion of Mr Jennings's improved Drain-pipes. The arrangement is excellent.

let into the Bath stone spandrils of the clerestory windows, and is suggestive of many similar applications in our church interiors. The productions of the Ladies' Guild are also a species of mosaic, but beneath, instead of on the surface, the paper is inlaid in patterns, though sometimes painted.

Messrs. Hart's many contributions are worthy of attention; and as an example of design applied to common things, I may mention the coal-plate, by their foreman, Mr. Ash. Only let it be once acknowledged that nothing is too insignificant to be treated with some feeling of art, and we shall soon have a universal improvement in things more important.

Messrs. McLauchlan and Mr. Simpson have evidently studied to unite excellence of design grounded upon architectural models, with excellence of workmanship. Messrs. McLauchlan's cooking-glass details, and the carved panel, are of early Gothic character; and they have adopted a method of ornamenting the gilt *Solain* surfaces, with burnished patterns, which is in itself a far better plan than the more common method of burnishing members of mouldings only, or the prominences of ornamental work, by which the general design is often much confused. This mode of ornamentation by two shades of brilliancy, at the same time making the outline pattern with an engraved line, is undoubtedly capable of great development and variety.

Mr. Simpson has also carefully followed the models within his reach, for the purpose of producing paperhangings to harmonize in design with mediæval architecture. There is in all a proper flatness of treatment, and the colours are quiet and mostly well contrasted, and the introduction of crests and initials is undoubtedly appropriate. These manufacturers are evidently in earnest, and deserve to succeed.

The tiles by Mr. Brown, of Surbiton-hill, and the porcelain baths by Mr. Finch, in one piece, are both good, and we are indebted to the Vieille Montagne Zinc Company for an improvement in the mode of applying zinc to roofing purposes—by which the usual boarding is omitted: the rafters form the rolls, and the metal receives, through the short distance between the rolls, the additional strength derived from corrugation.

Mr. Winston gave us an explanation of the method of painting and enamelling upon glass, but we have in Messrs. Bowden's contributions an article of much greater brilliancy, and in which the effect is got by cutting, somewhat in the manner of the Bohemian glass, the patterns being ground out with a stone wheel, after which a wooden one is applied to produce the polish. It is a peculiarity in the manufacture that the entire design is almost altogether left to the workman: he has no drawing, nothing but a dab or two of whitening on the glass; and if we were to ask him to sketch or draw his pattern, he would be wholly unable to do it, in spite of the precision with which he draws and works with his wheel.

Under our present head we may note the examples of carving and modelling: those by Mr. Taylor, being models of the carved details of a bookcase, are good, and lead us to believe that the work from which they are taken is worthy of its designer, Mr. J. K. Colling, who has for so many years devoted his study and attention to foliages, and so successfully. There is also much beauty in Mr. Phyggen's model, called the "Heavenly Chorus." Second, however, to nothing in these rooms is Messrs. Collmann and Davis's carved oak mantelpiece, designed by Mr. Collmann. We know that in many cases recently, foreign carvers and artists have been employed; and while there is now a very fair amount of talent available among the English stone carvers, we have here a production in *wood* carving entirely by English workmen: the work as we see it is precisely as it has been left by the chisel, and has not been touched with sandpaper: the ornaments are one of them affixed, but the whole is cut out of the solid oak. And while the workmanship of Messrs. Collmann and Davis is worthy of all praise, they deserve further credit for having given us a specimen which is not of a Gothic character, as an evidence that there is no want of superior workmen ready to devote their talents to a class of work which has lately become very unusual.

M. Remon's and Messrs. Galli and Cotti's contributions come under the head of the works of art complete in themselves. It is gratifying to see an exhibitor take such pains to exemplify his talent as M. Remon has done; and as the object of this inquiry is not criticism, there are but few remarks to make of an explanatory character.

The centre panels are in the Renaissance style, and an oak ground has been chosen as being suitable, and because cabinet furniture was during that period mostly of oak and walnut. The panels to the left are in the manner of the period of Louis XV. in the style of Watteau. Those to the right are in the style of Louis XVI. and Marie Antoinette, corresponding with the style of the Adams in this country, but with much less stiffness and tenuity; the distinctions so nicely kept up, the way in which the extravagance and ughness of these styles of art are kept subdued and in good taste, show that M. Remon is as much a master of his subject theoretically as he shows himself to be practically. As a further exemplification of these styles, reference should be made to the exquisite drawing by M. Prignot, who gives us the interiors of two rooms, carried out entirely, and both of which are designed in the same tasteful, judicious, and careful manner, and above all with a view to harmony, between the furniture and the architectural decorations themselves—a thing now, alas! hardly ever thought of.

Messrs. Galli and Cotti will, I hope, have succeeded in calling such attention to their fresco painting, as will lead to a trial of it being made; for, as the material is non-absorbent, it would appear to be especially applicable to a city like this, where so much coal is burnt, and where all porous materials become of one black hue, for it is *externally* that Messrs. Galli and Cotti wish their workmanship applied, and stipulate only that it should be done between the months of April and August, or even in September, if the painting face the south. Although the colours in use are few, comparatively, great scope is afforded an artist conversant with the material; and with fair usage the work, if properly done, is everlasting, and requires only an occasional washing with plain water to restore it to its pristine beauty.

Enough has, however, I hope, been said to show you how extensive is the interest that must attach to the art of architecture, and to all the multitude of manufactures, applications, sciences, and inventions connected with it. There is no view of the question you can take up, no direction in which you can turn, without being met with countless subjects of inquiry—numberless sources of enjoyment: take it in its highest and most abstract sense as a high art, or in its most practical feature of building constructions, as your particular turn of mind may lead, and you will find a never-failing food for study, never-ending opportunities for mental exercise, perpetual additions to attract your attention.

At the close of Mr. Edmeston's interesting observations, which included an appeal to the ladies to help them in earnest next year, some notes on the articles exhibited, forwarded by the Council of the Institute of Architects, at the request of the Committee of the Architectural Exhibition, were read; and then, with a cordial vote of thanks to the committee and to the various lecturers, the proceedings terminated.

The notices sent by the Council were brief expressions of opinion. We extract some passages likely to be useful to exhibitors by giving assurance to the public:—

4. Wilshere's Substitute for Paint.—The stain is agreeable, well toned, and allows the natural grain of the wood to be seen through it: there may be a doubt whether the varnish can really be depended on as a protection against the weather.

5. The Indurated *Natural* Stone (of Tunbridge Wells Co.).—Must be valuable where hard stone cannot be readily procured; and this article is said to be moderate in cost. The probable action of fire on the *artificial* stone should be considered, even granting that the atmosphere may be resisted as described in the catalogue. The cast work is not considered altogether satisfactory.

6. The Glazed Bricks and Coloured Tiles of the Poole Company show a meritorious advance in the manufacture; but they are expensive.

13. Serpentine Marble.—The Lizard Company exhibit well-prepared specimens. It is to be hoped that the same care in stopping and polishing is bestowed on larger articles made to order.

14. Ornamental Cut-Glass (Bowden's).—Appears good for domestic purposes, and reasonable in cost.

Green Slate from Carnarvon (not numbered).—Has good colour; is apparently of good quality; giving a metallic ring on being struck, and admitting of being cleft in moderately thick slabs: it is desirable to know the results of experience as to its durability.

20. Papier-Maché and Carton Pierre (Messrs. Jackson's),—Is a beautiful material; successfully applied to carry out an artistic design.

28. Models of Bells (by W. L. Baker),—Exhibit a clever method of hanging them; but it is desirable to know how the cast-iron cage, &c. may stand the test of a lengthened trial on a large scale.

29. Hollow Bricks, &c. and Brickwork (by B. Looker),—Are apparently good. The ventilation proposed to be effected in the humble class of dwellings is very desirable.

35. Magnus's Enamelled Slate Chimney-piece and Stove.—Apart from the clever imitation of porphyry, advantages are perceived in the combination of the two methods of warming rooms, &c. in this article.

41. Paper-hangings (Simpson).—Some are very good, apparently copied from old examples; while in others, the apparent imitation of encaustic tiles is to be regretted.

42. Bunnett's Interlocking Shutters, &c.—are ingenious contrivances, but require care in their application.

44. Italian Roof-tiles (by Brown).—The manufacture is good; but the affectation of age attempted to be given by the green colour must be objected to.

45. Botten's Patent Regulator and Water-closets.—On the whole, good; are useful where it is required to regulate strictly the supply of water to the pan; but inconvenient where it may be desired to discharge more water through it. The other articles are ingenious.

47. Indurated Stone (Barrett's patent).—The question arises whether dependance can be placed on the permanent condition of stone so treated.—[It certainly deserves a trial].

48. Artificial Stone (from Seeley's).—The experience of thirty odd years proves the durability of this article.

50. Self-acting Lever Tap (Davis's)—appears ingenious, though somewhat complicated.

54. Baths and Fittings (Finch)—3, 4, 5, 6, 7 (tiles)—are well known and useful. The other items under this number appear good.

55. Gas and Day-light Reflectors.—Are very useful where there is a deficiency of natural light. The latter are very serviceable. Some method of rendering them in unison with the architecture of the building in which they are introduced may be considered desirable.

In designing furniture, whether mediæval or modern, convenience and applicability to the purpose should not be lost sight of: sharp unnecessary angles and projections should be avoided.

Fresco paintings on walls are becoming more appreciated, where their durability can be depended on, and their execution may not occasion greater comparative outlay than other methods of decoration. Should the specimens shown combine these advantages, a very desirable means of improving the appearance of our rooms will be placed at the disposal of architects.

The iron and brass work in the third room does not display much novelty: the brass appears to be better designed than the iron. It may be remarked, that sharp unnecessary edges should be avoided in all articles required to be handled in constant use. Exception must be

taken to the design and painting of the porcelain finger-plates.

In conclusion, the Council of the Institute of British Architects must not omit to express their opinion as to the advantage to architects, manufacturers, and the public generally, which is likely to arise from periodical exhibitions, such as the present, of materials, manufactures, and inventions connected with architecture, by tending to keep up a fair spirit of emulation among the producers, and conducing to the development of structural science in combination with artistic design.

THE NEW PALACE AT WESTMINSTER. SIR CHARLES BARRY'S CHARGES.

Copies of Treasury minute, dated the 6th February, 1854, and 29th January, 1856, have been issued, with regard to the claims of Sir Charles Barry for services connected with the building of the New Palace at Westminster. This sets forth, that on the 26th May last the following offer was made to Mr. White, as acting for Sir C. Barry, with a view finally to settle all questions as to commission, measurement, and all other claims up to October 2nd, 1853, to which date the closed accounts extended, Sir C. Barry, it should be said, having put in various claims for extra payment over and above his commission:—

"1. That a commission of three per cent. should be allowed on the entire outlay of 1,506,845*l.* up to the 2nd October, 1853.

2. That a remuneration for measurement upon the whole of the works included in that outlay should be paid at the rate of one per cent.

3. That those commissions should cover all demands of every kind whatsoever for the past, the services for warming, lighting, and ventilating alone excepted, which should be dealt with separately, and upon their own merits.

4 That the remuneration of Sir Charles Barry for the future should be fixed at—

Three per cent. commission on the outlay as architect, and one per cent. for measurement upon all works to which measurement applies; and that no furniture, &c. should in future be furnished by Sir C. Barry, except by the special order of the Treasury.

After numerous further interviews and discussions with Mr. White, that gentleman, on the part of Sir Charles Barry, declined the terms of settlement thus offered, and pressed again the claims for the extra services performed.

My Lords having again referred Sir C. Barry's claims for a report to the Board of Works, and having very carefully reviewed the whole case, continue to be of opinion that the terms herein stated are not only fair, but liberal; that they include all remuneration to which Sir C. Barry is justly entitled for the services he has performed; and that they could not extend the same consistently with their duty to the public.

Considering, moreover, that the matter has gone on for nearly twenty years without any distinct understanding being arrived at, notwithstanding the efforts of every successive Board of Treasury to do so, my lords are of opinion that it is inconsistent with the public interests that it should be any longer delayed; and they therefore, as far as they are concerned, must record these terms as their final decision upon the questions at issue. They are pleased, consequently, to direct that no further payment be made on account, until a final settlement of the past, and an agreement as to the future, are concluded."

Sir Charles Barry has since published a statement, showing that when he first entered upon his duties in 1837, it was with the understanding that the usual commission of 5 per cent. would be the amount of his remuneration; that after eighteen months he was informed of an order from the Treasury that, for certain reasons assigned, his remuneration was to be limited to a fixed sum of 25,000*l.* being nearly 10,000*l.* short of his stipulated commission, and that the same principle of limitation was to be applied to all public buildings from that time. Against this decision Sir Charles entered a protest, which has never been answered or contested; nevertheless, by the advice of his friends, he acquiesced in the decision, upon condition that it should be reconsidered on the completion of a considerable portion of the work, when he expressed his belief that the injustice of such a reduction from his legitimate claims would be manifest.

That owing to a great extension of the building, and numerous changes, sanctioned and commended by Parliamentary committees, increase in the value of materials, and other causes, the expenditure has been greatly increased, and the arrangement in question altogether nullified.

The Government has in effect admitted the nullity of that arrangement by making unconditional payments to the architect from time to time, of about 20,000*l.* beyond the original fixed sum. After much negociation with many successive Governments for nearly twenty years, the present one has made an offer of 4 per cent. upon outlay, and a special recompense for the trouble and difficulties encountered by the architect in respect of the warming, ventilating, and lighting arrangements of the building. To avoid further contention, but not until after having in vain urged repeatedly a reference to arbitration as the only fair and proper mode of deciding upon the various questions at issue, Sir Charles has been induced, at a very considerable sacrifice, to consent to the principle of remuneration now proposed, upon condition that certain extra services, not pertaining to his duties as architect of the new palace, and to which the proposed commission can have no reference, should be recognized and recompensed, either by a fixed sum, or at such an amount as might be determined by arbitration, to which proposition, however, the Government has not acceded.

With respect to the appointment of the late Mr. Pugin, and to a claim made by their Lordships for a set-off upon the architect's commission on account of moneys paid to him, Sir Charles points out that Mr. Pugin was not employed upon any duties that devolved upon the architect of the new palace, inasmuch as all designs for that building had emanated from Sir Charles himself; but only as the superintendent of the wood-carving department, in carrying out the architect's designs, to which office he was appointed by the Government at a salary.

As to the mention made of the furniture in the minute, which, we are able ourselves to say, has led extensively to the very disagreeable inference that the architect had *supplied* it, in the way of trade, Sir Charles states that he had only been employed to make the designs for it, see to its being properly executed in accordance with the contract, and check the accounts.

Sir Charles conceives that he has a right to complain that the Lords Commissioners of her Majesty's Treasury have constituted themselves the judges in their own case; that they have formed their decision partly upon *ex parte* statements, to which he is an entire stranger; that, while they are now paying at the least 5 per cent. to all architects and engineers of independent practice for works of the plainest and most simple, although most expensive, character, they make the New Palace at Westminster, which undoubtedly is the most elaborate and complicated edifice in modern times in this country, the sole exception, and propose not only to pay to its architect nearly 20,000*l.* less than his legitimate claims, but to deprive him of all remuneration whatever for many extra services not pertaining to his duties as the architect of the New Palace, and to which their offer of commission can have no reference; and, lastly, that their lordships have not acceded to a reference of the several questions, at issue, although Sir Charles has repeatedly expressed his perfect readiness to abide by the verdict of such a tribunal.

In the course of the correspondence which has been going on, Sir Charles, in reply to a statement from the Treasury that "my Lords" were acting on precedent, gave the following list of public buildings, upon the cost of which their respective architects had received 5 per cent. *since* the year 1832:—The British Museum, the General Post Office, the State Paper Office, Whitehall Chapel, Westminster Hall, the National Gallery, the new front of Buckingham Palace, the Museum of Economic Geology, the new Money Order Office (St. Martin's-le-Grand), the Royal Pavilion at Brighton, St. Katherine's Hospital (Regent's-park), the Lodges and Gateways in the Parks, Kensington Palace, Temporary Houses of Parliament, Chapel Royal, St. James's, the Courts of Law, &c. &c.*

In some of the above instances the architects were also relieved of the measuring and making up of the accounts, &c. It appears, therefore, that payment at the rate of 5 per cent. to the architects of all public buildings has invariably been the rule of the Board of Works since the year 1832: prior to that time the same rule prevailed except in respect of those buildings which were carried into effect under the direction of those architects who were for a time attached to the Board, who received 3 per cent. for certain understood reasons.

With reference to the additions and alterations made under the direction of Mr. Nash, at Buckingham Palace, and the subsequent alterations under Mr. Blore, at the same building, the remuneration received by these two gentlemen was not only at the rate of 5 per cent. but they were also relieved from all labour, cost, and responsibility as to measuring, &c.

As to the works at Windsor Castle, Sir Jeffery Wyattville was not only paid at the rate of 5 per cent. but he had also the same relief afforded him as to measuring, &c. which circumstance, and not the payment to him of 5 per cent. as supposed by their lordships, was, as appears by a Treasury minute of the 6th October, 1826, considered to be an equivalent for his journeys, and some other extras usually charged by architects. Notwithstanding, however, this arrangement in lieu of a charge for journeys, Sir Jeffery had also the advantage of having a residence assigned to him in the Castle, free of charge, during the whole of the time he was employed upon the works of that building. In short, the payments made to the architects of the two above-mentioned works, together with the immunities and advantages which they enjoyed, constituted a remuneration fully equal to 7 per cent.

As to his own case, Sir Charles states that he has not only performed all the professional duties which Sir Jeffery Wyatville and Mr. Nash performed in respect of Windsor Castle and Buckingham Palace, but in addition has been called upon to take upon himself the labour and responsibility of making contracts, forming elaborate schedules of prices, measuring, and making up accounts amounting to nearly 1,500,000*l.*, and of adjusting disputed claims to a considerable extent, from which onerous duties they were altogether exempt; and that he has had at least as great, if not much greater, difficulties than they had to contend with in carrying into effect the works at the new Palace at Westminster, owing to the necessity of forming an artificial foundation in the river; the limited clearances from time to time of the site; the necessity of keeping up old buildings—often a work of much difficulty and danger—and constantly adding temporary accommodation, so that the sittings of Parliament might not be interrupted; the interference with the progress of the works by parliamentary committees and other authorities, involving numerous alterations and delays, and the impossibility, in consequence, of spending, upon an average, more than 90,000*l.* per annum, by which the works have now been in hand more than eleven years beyond the time originally assumed for the completion.

The tone of the Treasury "Minute" throughout seems to us harsh and unfair. We give the following letter on the subject from amongst those which have reached us from correspondents:—

I am sure the profession generally will be much pleased to see the firm manner in which Sir Charles Barry has asserted his claims to proper remuneration for his laborious services connected with the new Houses of Parliament. It is monstrous to suppose that a man of his great ability is to be denied the proper reward for a work of such extraordinary character. My object, however, is to confirm Sir Charles's remarks in reference to the late Mr. Welby Pugin. That gentleman, in a conversation with me not long before his death, expressed much

* To this list may be added Board of Trade and Treasury Buildings, Trafalgar-square, Piccadilly improvements—all carried out under the professional guidance of Sir C. Barry.

annoyance at the prevalent reports, which attributed the best portions of the design of the New Palace at Westminster to his skill. I had frequently heard these remarks myself from people in high position, and upon mentioning it to Pugin, he most emphatically denied the truth of the rumours, and desired me to make the facts known wherever I could, adding some very complimentary remarks upon Sir Charles Barry as an architect, and claiming for him that facility and readiness of design which he is known to possess. My intimacy with Mr. Pugin commenced while a pupil with his father, and I never knew a person more ready to give praise where he thought it due, while at the same time he never ceased to denounce those who pretended to skill which did not belong to them.

BENJ. FERREY.

Any evidence as to Mr. Pugin's position should be quite unnecessary after the letter addressed to us by that gentleman some years ago, which was printed in our columns.

ON THE APPLICATION OF PAINTED GLASS IN ARCHITECTURE.*

A FEW years ago I should not have ventured, in advocating a new system of glass painting, to have recommended any but a very general conformity with ancient precedents, from the want of a material similar to ancient glass. But this desideratum has now been obtained, entirely by the skill and perseverance of some of my scientific friends, the successful issue of whose exertions is, perhaps, best acknowledged by the attempts at imitation on the part of those who at first were loudest in decrying and ridiculing their discoveries. The similarity of this new material to the old is, however, so close, that we may gather hints for its employment from the works of the ancient glass painters.

An extended acquaintance with ancient painted windows will convince us that the nature and execution of the design varied with the nature of the material employed.

In the twelfth and thirteenth centuries, the mode of painting was of a kind admirably calculated to tell on glass so powerful in its local colour as the material then used. The form of the features and draperies was strongly marked with opaque outlines, which, in fact, amounted to, and served as, the deeper shadows; and these were united and softened with a shadow in half tint, roughly applied as a wash. The pictures were also composed on a principle well suited to a stiff mosaic. The figures, placed in a single line, were separated from each other, and insulated by a stiff-coloured ground, by which means distinctness was attained without the aid of atmospheric effect. A somewhat similar mode of treatment was practised in the fourteenth century, but not so satisfactorily,—a more complicated kind of composition being usually adopted, destructive of the former means of producing distinctness, in lieu of which no new method was introduced.

The fifteenth century is distinguished by a far more delicate mode of execution. The former thick outlines were reduced to hairstrokes; and carefully finished shadows, varying in depth, succeeded the monotonous wash of shadow in half tint. The groups of figures, too, were arranged, as we see them in ordinary paintings, —some standing before the others. And if the artist did not succeed in separating the figures from each other, and making his composition distinct, it was but from want of skill, not from intention. In the sixteenth century, this object was fully attained; only, however, by a more rigorous and skilful application of the means which the artists of the fifteenth century possessed.

Glass paintings may, indeed, be divided into two classes. The first where the mode of representation is conducted on an artistically flat principle,—as in a bas relief. The other, where the picture is composed on the principle of representing depth. It would be too much to say that either of these different principles has always been consistently carried out in ancient glass paintings. The first, or flat principle, is best indicated in the works of the twelfth and thirteenth centuries, in which there is little attempt to represent objects situated in more than a single plane, having a thickness not greater than that of the human figure. This principle, as I have said, was violated in the fourteenth century; the whole of which century, as well as the whole of the fifteenth, was spent in the passage from the flat to the rotund style of representation, the change not being complete till the second quarter of the sixteenth century.

We need not trouble ourselves, therefore, much with any intermediate types, but confine our attention to the remains of painted glass belonging to the twelfth and thirteenth and to the sixteenth centuries.

Of the twelfth or thirteenth century, the best subject for examination, is the Medallion window,—so called from its design, consisting of a series of panels or medallions, containing groups of figures, and embedded in an ornamental ground. I am not one of those accustomed to go into a fit of enthusiasm at the sight of one of these windows, which, I suspect, owe their popularity, principally, to the unquestionable beauty of their individual tints; for they are often confused in composition, and occasionally exhibit an undue predominance of some particular colour. I look upon them not as models for imitation, but only as affording the means of instruction, and hints for the achievement of something better suited to the requirements of the higher artistic knowledge and more fastidious taste of the age in other matters.

On examination, we find, as I have already stated, the figures composing the group for the most part separated from each other, arranged in a single line, and cut out by the coloured ground of the panel, which usually is of deeper hue than the flesh or draperies, and is left unornamented, doubtless to avoid distracting the attention from the figures. The figures are thus rendered distinct and effective,—at a distance proportioned to their size,—without the aid of a receding background, and with but little assistance from light and shade. The frame or border of the panel, the ornament which fills the interstices between the panels, and composes the border which encircles the whole design, are all superficial in design. On looking at Roman work of the time of the Empire, and at the carved ivories which from thence form a continuous chain, illustrating the transition from the Pagan to the Christian sentiment in art, we perceive at once the influence under which the glass painters of the twelfth or thirteenth centuries worked, and the classic origin of their ideas of art. And when we consider that all early Gothic art is derived more immediately from the Greek than the Roman, we need not be surprised at the strong resemblance which exists between the draperies and ornaments of the glass paintings of the twelfth and thirteenth centuries, and those of the archaic, rather than the later Greek sculpture, the remains of which, lying chiefly in Asia Minor, might perhaps have been better known to the artists of Byzantium.

A good deal of confusion and trifling criticism might be avoided, if, in all our applications of painted glass to Gothic architecture, we should propose to ourselves,—not the following of any particular style, which can hardly fail to involve a following of certain defects, that had better be avoided,—but the attainment of real harmony between the new work and the old architecture.

If this be our aim, — unless, indeed, we are prepared to admit that the very defectiveness of old glass paintings is an element of such harmony, in which case the sooner we get rid of Gothic architecture the better,—we shall find the present mode of estimating a new window, —in proportion to its chance of being mistaken for an old one,—only a mischievous guide, and shall learn, on the contrary, to value its inevitable nineteenth-century character, as one of its principal excellences.

With a view to ascertain how far we might succeed in attaining harmony between late Norman architecture and painted glass, by an attempt to work up to the high standard which influenced the artists of the twelfth and thirteenth centuries, instead of working down to the level which they themselves attained, I caused the experiment to be tried a few years ago, of introducing into some windows in the round part of the Temple Church, figures after Greek designs. The experiment was, no doubt made cautiously, and even timidly; but its success has been such, in the judgment of those best qualified to form an opinion, that I have now no hesitation whatever in recommending, in nineteenth-century glass work designed for a twelfth or thirteenth century building, the introduction as much as possible of the Greek element in the form of the ornament, as well as in that of the draperies; taking care, of course, to express in the figures true Christian sentiment, as we find that expressed by the greatest of all Christian or any other painters. I laugh at the imputation of "eclecticism," which such a recommendation is likely enough to provoke from persons ignorant of the real meaning of the word. For if this is eclecticism, it must follow that Raffaelle himself was the most odious of eclectics. That the recommendation, which is now of somewhat old standing, is not an impracticable one, has been lately proved to me by the sight of some cartoons, done by an artist, for some windows in one of the transepts of Lincoln Cathedral.

I really believe that the nearer our glass paintings approach Greek excellence, the better they will be found to harmonise with the ancient architecture of the twelfth and thirteenth centuries. I use the term "ancient" architecture advisedly, because I doubt if they would be found to harmonise so completely with modern Gothic; in which I wholly miss that inexpressible vigour, and real feeling for high art, which are the natural result of honestly working up to a high standard, instead of idly descending to a low model; and which most interesting features, I am bound in common fairness to say, I recognise more or less fully in all modern edifices erected in the classic styles.

In like manner we might advantageously borrow ideas from the antique in the arrangement of the groups, attending particularly to Mr. Cockerell's hint, in his admirable lectures on sculpture,—about affecting diagonal and avoiding perpendicular lines in the figures. The painting of the figures should of course be executed in the manner which the experience of the old glass painters has shown to be best suited to a dense, strongly-coloured material, and they should be shaded so as to appear rotund. For, in speaking of a flat style, I always mean an artistically flat one,—a style, in short, induced by the necessity of employing stiff colour, in which the skill of the artist is evinced by conforming to unavoidable conditions, and yet producing a good and effective picture,—not a style in which, from a want of artistic knowledge, every figure looks as flat as if it had been ironed out against a wall.

In the form and general arrangements of the medallions, and of the entire window, ideas might be borrowed from antique mosaics and other work. Even Italian ceilings might show how the ground colours of the panels could be more varied than is ordinarily the case in mediæval example; care of course being taken that a change in the ground colour should be followed by a corresponding change in the colouring of the group, which should almost always be either decidedly lighter or decidedly darker than the ground on which it is placed.

Many of the pattern windows of the twelfth and thirteenth centuries, which, like all other mediæval pattern windows, are principally composed of white glass, are truly admirable in design, and could hardly be improved on. But there is yet a wide field for the invention of new patterns borrowed from the antique, and which, if carried out in a proper spirit, would harmonise with ancient architecture as well, and with the new picture windows probably better than the older patterns.

Of course, all these remarks are made subject to the employment of the new material I have already alluded to; a recommendation which, as I have no sort of interest in the matter, I may be allowed to make with a pure conscience.

I shall offer but few observations upon the nature of the glass paintings which seem most fit for the windows of a building of the fourteenth century. It is true that deep-toned glass is a

* See p. 71, *ante*.

concomitant of decorated architecture; but I question much if a mass of such deep colouring as this glass might present is best adapted to a window having mullions and tracery. A mass of deep dense colour always appears to me to confuse the more minute tracery. On the other hand, a window with mullions and tracery is apt to lose its breadth of effect, unless some general hue or design pervades, and so unites together, the whole of the lights. For these reasons, I think that, upon the whole, the rich sea-green white pattern windows of the period, with or without a row of coloured panels containing groups of figures running across the lower lights, produce the most satisfactory effect. If so, they afford an excellent guide. The patterns themselves are generally most beautiful, and it would not be easy to improve upon them. And the remarks I have already made upon the general treatment of medallion pictures, to be executed in a dense deeply-coloured material, would be equally applicable to the panels of those designs. I need hardly trouble myself to condemn the employment, in the fourteenth century, often to the oppression of the poor figures beneath, of canopy work, which, like an architect's geometrical drawing, does not distinctly express the various plans and projections of the design, but is found barely to indicate them, even after a long and laborious search. It would be hard to say, after so many existing examples, that the use of figures and canopies in painted windows, is not in strict accordance with Gothic principles. But the only principle with which we are concerned, is that of good taste; and the use of such designs, being in their nature incapable of adequate representation in a dense deeply coloured material like that of the fourteenth century, is only one of the many proofs of the decline of art which that century affords. The Gothic architecture of the fifteenth and sixteenth centuries is so much alike, that it is not surprising to find the sixteenth-century glass paintings that have happened to be placed in buildings of the fifteenth century agree so completely with the architecture. Indeed, the glass paintings of both periods are alike in principle; the development of this principle, in the sixteenth century, constituting the chief difference between them. The old painted glass of the fifteenth century is pleasing, from its pearly lustre, the result chiefly of delicate shading and high finish; but the glass of the sixteenth century is as pearly, and in all other respects superior; for which reason we may devote our attention to it.

The works of the second quarter of the sixteenth century, in which I include both Gothic and Cinque-cento examples,—for the style of ornament is but an accident, having no bearing on the general subject,—if considered as forming collectively a class of glass paintings in which pictorial effect is aimed at, rather than a rich collection of brilliant tints, are so nearly perfect in all their varieties, from the simple figure with its background of tapestry, to the composition in which several planes of vision are represented, as in the fresco of the school of Athens, and in some of the cartoons; that it seems almost superfluous to advocate their study as models. A great many of these designs exist; and a skilful artist will easily perceive, and as easily avoid their defects. The finest are undoubtedly those in which, as in the cartoons, and other works intended to be executed in a material not favourable to a representation of depth, the figures occupy the immediate foreground, and constitute the most important feature of the picture; the background being a mere accessory, composed,—unless when the nature of the design or other circumstances require that it should be occupied with architectural forms,—of a light neutral blue glass, which, whether left all clear as sky, or partially cover l with a landscape, by its sober colouring, relieves and throws forward the more positive colouring of the group. It is important to observe that these, as well as the earlier glass paintings, are composed on the principle of a broad sunshine effect, by which distinctness is attained without having recourse to any very exaggerated degree of shade. Hence the brilliancy of these works, as compared with later examples, in which the opposite principle has been adopted of shading up to a point of light, and which in many cases leaves more than one-half of the picture,—not in transparent shade, as in oil painting, but,—on account of the different conditions of a glass painting,—covered with a harsh, dry, heavy coat of dull colour. The expedients adopted to obtain a receding effect, when objects at different distances are represented in the background, are as simple as, and very analogous to, those used in the school of Athens.

Having thus completed our remarks on the mediæval styles, only a very few observations need be made on the nature of the glass paintings most likely to harmonise with buildings in the Classic styles.

With regard to Palladian buildings, we have the Cinque-cento style ready made to our hands, the various designs of which more or less rich in colour, light or deep in tint, flat or receding in their design, would supply ample hints for meeting any exigency of local position or character of the surrounding architecture.

With regard to Greek buildings, the ground has hitherto remained untrodden, and we are left without any practical guide. No one, I apprehend, would think of adopting the Byzantine expedient of a pierced stone framework, even if such could be proved to be of classic origin. If we infer the proper style of glass paintings from an examination of antique works in fresco or mosaic, we shall be inclined to adopt a style light, gay, and lively in its colouring, like the Cinque-cento, and possessing little of the deep, solemn character of the glass paintings of the twelfth century, the material of which, as already stated, is almost identical with the glass of the ancient Greeks. The question is,—supposing that the Greeks had been acquainted with the manufacture of window glass, what sort of colouring would they have been most likely to have employed in their windows? If we think that they would have given the preference to cool, richly-coloured glass, the supposition may be reconciled with the different aspect of the ancient mosaics, by considering that these works were composed of materials most of which are naturally of a light colour,—and that forming opaque surfaces, deriving their effect from reflected light, they were not so suited to display deep or rich colour as an object that transmits light. The subject, it must be admitted, is one of considerable difficulty. If I *must* offer an opinion on it, I should incline to think that richly-coloured glass, representing pictures in mosaic, such as those which have been already referred to, would prove most in harmony with the architecture, even though such treatment might have the effect of diminishing the apparent size of the building. Such is an outline of my views on this interesting subject,—views which, in whatever manner they may appear to have been stated, I can answer for it, have not been conceived in a dogmatic spirit. The shortness of time allowed has compelled me to abstain from many kindred topics, and barely to allude to others, so that I have presented little else than the epitome of an argument. I can only hope that I have expressed it intelligibly. In conclusion, I will offer a few remarks on a subject, the consideration of which, as it is of very general application, I have postponed to the last. I allude to the vexed question, whether a pictorial design in glass should ever have a receding background, or transgress the limits of a single light in a window?

It cannot be denied that there is an abundance of ancient glass painting, having, or intended to have, receding backgrounds; whilst of designs extending beyond the limits of a single light, there is a series, commencing with the introduction of the mullioned window. Those, therefore, who argue in denial of either proposition, must make out that it impugns some principle of taste; for it is idle to say that it is opposed to any Gothic principle.

It may readily be conceded that a receding background is incompatible with the use of a dense, richly coloured material, like that of the twelfth, thirteenth, and fourteenth centuries. But, unless it can be shown that no glass paintings, whatever be the principle of their composition, can adequately represent depth,—and before we admit this, we must deny the evidence of our senses,—it seems to savour of ultra-mediævalism to banish them from buildings into which they were admitted by those who actually lived in the Middle Ages; and so, still further to restrict the range of subjects, already sufficiently circumscribed by the conditions of glass painting.

We may, I think, very fairly, and safely, continue to prove to the world that we, at all events, do not profess to be wiser than our ancestors, until such time as our modern mediævalists have either produced some new variety of subjects, in all respects equal to the class they reject; or else, retaining such class, have hit upon some new mode of treating it, which shall be as satisfactory as that adopted by the artists of the sixteenth century.

And with regard to the question of carrying a subject into more than one light, there are many persons, whose reputation for good taste would perhaps stand a comparison with that of our mediævalists, who are unable to perceive the ill effect which they allege is produced by even a figure being cut through by a mullion. As far as my own experience goes, I have always found that, if a sufficient quantity of the object separated remain on each side of the mullion, the eye passes across the mullion without being sensible of any interruption of the design. It is true that a confused effect will be produced if a sufficient quantity of the object cut through does not lie on each side of the mullion, to attract the eye across; and this, no doubt, is the reason why, in several Cinque-cento designs, where the head of the window is filled with a quantity of minute tracery, as in the windows of King's College Chapel; no attempt is made to extend the design from the lower lights into the tracery. Every principle must be more or less confined in its application by circumstances; but it is one thing to modify the application of a principle, and another to reject it altogether. And the rejection of the principle of carrying a subject across several lights of a window would involve, equally with the rejection of compositions having receding backgrounds, the further curtailment of the stock of subjects to which the choice of the glass painter is confined, without, as it seems to me, any commensurate result.

Charles Winston.*

CANNING-TOWN:

A NEW LONDON DISTRICT.

We have before now mentioned the manner in which Mr. Mare, the shipwright, has battled with Father Thames, and succeeded in planting his engines and steam-hammers on a spot which a few years ago was covered by every high tide. The establishment of this great manufactory, kept moving by the hands of 4,000 or 5,000 people; the Victoria Docks, and other works which are in progress in this neighbourhood, have led to the formation of a new town, unknown to the great mass of Londoners.

We all know the consequences of planting large populations on ill-adapted lands, without making provision for that most important necessary of accumulated life, *drainage*; and it might have been hoped that the sad effects in known instances would have led to the prevention of other similar mistakes. It is, however, not so; for on a part of the Plastow Marshes, not far from Mr. Mare's shipyard, Canning-town has been commenced, without the provision of either proper roads or drainage.

On one side of the new town an earthen embankment dams off the water of the Bow-creek. The level on which all the houses are placed is below that of the ordinary half-height of the Thames. Standing near the iron bridge which crosses Bow-creek, let us take a peep at the scene which presents itself. Near at hand

* We have received the following with reference to Mr. Scott's paper in our last:—"Sir: Mr. G. G Scott, as a practitioner of Gothic architecture, may feel sore at his views not being universally received But I protest against his assertion, as unjust and altogether fabulous, that I have been rendered hostile to 'the movement' by the illhumour of certain foolish zealots, whose perish misrepresentations I have had to correct. Although fond of antiquarian pursuits, I have, in common with many sober-minded antiquaries, invariably opposed the attempt to mediæval ze the nineteenth century; because, b sides being otherwise objectionable, it appeared likely to lower the standard of art. My belief on the last point is corroborated by what I see continually. I may add, that it is not likely that Mr Petit should have been disturbed by the treatment I have experience l from thee rien is of Mr Scott, since he has always concurred with me in laughing at it, as something inexpressibly diverting. I am thus driven to crave permission to intrude on your valuable s; ace, and am, &c.
C. Winston."

CANNING-TOWN: A LONDON SUBURB.

is the new town, and on all sides of the green level London is marching with giant strides. A few years since, if a dozen people were seen crossing this bridge in the course of a day it was a matter of wonder: now the bridge has become a great thoroughfare. Nine or ten years since there were only two or three houses, and now look at them! It would surely suggest that the sewerage of London should be taken further afield. If they put it into this creek, or into Barking-creek, but little advantage will be gained. Our previous half measures have been attended with such an enormous expense and so much damage to health and life, that it is time we adopted another course. If the sewage is to be manufactured, and distributed as a manure over the land, instead of poisoning the water; or if for some time to come we must, for want of knowledge, continue to waste it;—in either case the manufacturing of the refuse, or the entrance of it into the Thames, ought to be at a safe distance from our two or three millions of people. If the sewerage of the north of London is to be passed into the river, it must, to be effectual, be nearer to the sea than Plastow-marsh or Barking-creek. It would be, to say the least, a waste of money, to carry the drainage and run it into the Thames at a point from which, instead of sweeping into the sea, it will come back and float to and fro past the City like the body of a poor boy drowned here some time ago, or the dog to which we have before alluded, and be deposited on the banks of Rotherhithe or Lambeth. We have spoken to many persons of experience on the river, men who have for years been acquainted with the currents, &c. of Father Thames, and there is but one opinion amongst these practical men. However, it is not our present object to say more on this important point. We would direct attention to our sketch, which will help those who cannot pay a visit to the place to understand the position of affairs.

In the view of Canning-town, as it appears from near to the iron bridge, the green level is shown extending over a great extent. Along the margin of this flat land, in every direction, houses, shops, public houses, and churches, are new to be seen skirting the level, and gaining every week further and further upon the space, which is chiefly several feet below the high-water mark of the Thames. The new town, which already consists of several long streets, will, in the course of a few years, spread out and meet the approaching houses, and all this level will be planted with dwellings and inhabited by many thousands of people. The artificial bank of Bow-creek and the embankment of the Thames are all that prevent the houses here from being flooded every high tide. To provide for the effectual drainage of this district by the ordinary means is impossible. The houses here have been erected without the means of either carrying off the refuse or properly getting rid of the damp. In course of time the *débris* of these and other houses will raise the level; but in the meantime it is sad to think of the sacrifice of human life which must take place without prompt measures. With some difficulty we managed to reach the place on foot from the turnpike road, and found the condition of the streets miserable: many of them, although the day was tolerably fine, were almost impassable, and vehicles sank almost up to the axletrees in the mud. In many parts were great pools of stagnant water. Several of the inhabitants said that if we had come a few days before, during the rain, it would not have been an easy matter to get along the streets at all. Most persons complain already of the drainage. We understand that it is proposed to take the sewerage to a certain depth, and pump it into the Thames by steam power. If something is not done, in two or three years' time the ground will be poisoned by cesspools, water will stand on the surface, and evils of a serious nature will follow.

In a score of years or less, Canning-town will be an important place, with its churches, omnibus and cab stations, and its masses of rich and poor. Let us hope for the introduction of measures proportionate to the extent of the future requirements. Flesh and blood are precious materials.

ON THE INFLUENCE OF LIGHT AND SHADOW IN ARCHITECTURAL COMPOSITION.*

AMONG the many studies of the architect, none deserves greater attention than that of the varied arrangements of light and shadow: by this means the first impression is made on the mind, of grandeur, or of meanness, of beauty, or of deformity. We see at a glance whether or not a master-hand has been engaged; for, should the *general effect* prove disagreeable, no labour on the details will ever compensate for that deficiency. But the architect who works upon some ascertained principle of effect will always be able, if he choose, to depend on the same knowledge for his details; and, from the fact of his being able to grasp the whole, will feel no difficulty in mastering the minor portions of his subject.

It is the want of this knowledge that so frequently produces disappointment after unrestricted outlay. Labour, the most costly, is thrown away on parts that never can help the general effect, because mere ornamentation will never produce it. It becomes, then, necessary to find some principles on which we may rest for guidance under given circumstances; and, although many obstacles may arise to the *perfect* realization of our conceptions; yet, if we are confident in the effect we wish to produce, these obstacles will never prevent a comparatively satisfactory result.

* The following paper, illustrated by sketches, was read at the Architectural Exhibition on the 13th instant.

It has been said, and, indeed, often repeated in print, with considerable authority of late years, that architects should confine themselves to the more severe character of geometrical drawings,—that *outline* or simple *form*, without substance, is *best* adapted to *ensure purity* of design,—and that in this manner their ideas will be better presented for public inspection than by any other means.

Without questioning the *use* of simple outline, I deny that it is *all* that is required, or that in its utmost perfection it will ever give a just and truthful idea of the reality. Light and shadow must ever exert the most powerful influence on architectural effect; and I am totally at a loss to conceive any reasonable argument that should prevent its being studied from the beginning of every work, in conjunction with the absolute necessities of arrangement. I think it will be pretty readily admitted that to judge of the merits of a thing it must be seen. Then *how* is an architectural composition to be judged of *before* it is *built?* By simply representing it as it will appear with all its lights and shadows truthfully displayed. Every one knows that it is an impossibility to see a building when executed as it was seen when drawn geometrically; and, although such drawings are necessary to the workman, they convey the most false impression to the general observer. In fact, it requires a mature and practised judgment to calculate, from geometrical drawings *alone*, the true effect *in execution*. I allude to these printed notions because I am of opinion that they have already had a tendency to divert the mind of the student from what I believe to be a healthy and useful course of study. I would not lead him to imagine that he must of necessity be either a Raffaelle or a Michelangelo; but *I do* think he would be more successful in the execution of his work as an architect if he studied *somewhat* more as a painter. By studying as a painter I do not mean that meretricious daubing which might be aptly called the gamboge and burnt sienna styles, but that he should find out and impress himself with the true principles of art, by which a large field would be opened to his imagination. He would see how nearly allied these principles are in *all* branches of *art*; and we should then have less chance of deploring the loss of opportunities, so frequently complained of when too late for remedy.

But to ascertain the value of this quality in architecture, let us suppose ourselves looking over some rich valley, with its varied beauties of rock, wood, and water. How grand, and yet how exquisitely delicate, are the lights and shadows as they fall on the natural objects! We are delighted with the harmony of the scene, until, in the midst of all, a huge mass of building destroys the charm. We detect its meanness from its want of depth in its shadows. The absence of light playing on graceful forms tells us it is *labour* without *mind*. It is a blot: it defaces the beauties of nature; and we execrate

the ignorance that could perpetrate a work so vile amidst so much loveliness.

But let us suppose in its place a classic temple, with its rich, deep shadows, among its columns, its broad and bold cornices, its delicate enrichments, all keeping their relative value to the whole. Will not this be the crowning interest of the view? Or let it be a Gothic shrine of English architecture, with its bold arches, and play of light upon its tracery, buttresses, and pinnacles. Should we not be attracted to this point as to a gem set in the face of the landscape, and be so strongly impressed with its value, its interest, and its being truly a work of art, that all other feelings would give place to the desire of more minute examination? I, of course, speak here of the general effect of light and shadow; but, if this produces at a glance so strong an influence on the mind, it must surely be one of the most important studies of the architect.

With painters there are three distinct principles of effect recognised; and, if the architect, while making his design, will consider the aspect under which it is to be generally seen, he will readily understand which of these effects it will be desirable to work up to. It may be objected, and at first sight it may appear a very fair objection, that if my suggestions are acted on, conventionality and mannerism will rule everything. But a little reflection on the various uses for which buildings are constructed (which must of course always rise paramount to every other consideration), will show us that such a result is not to be feared. Besides, these three simple principles to which I allude, admit in *themselves* of such *infinity* of modification, that instead of trammelling the *mind*, they become only *landmarks* to tell us *where we are*, and in which direction to *go* to find *what* we *want*.

In speaking of them as simple, I do not mean to say that this knowledge is attained without patient investigation and labour, for their very simplicity will only be acknowledged upon intimate acquaintance with them.

It is probable that my observations as to the *possibility* of an architect applying the knowledge of a painter may be received with considerable doubt by many. It may appear to them that artistic effect is a visionary idea, or only to be met with on the canvass of the painter, and that with materials such as brick and stone it is nonsense to expect it. They will say, "Give us practical knowledge in the way of building, and leave these theories to the painter, who alone can make use of them." My answer to these objections is this: The painter who represents on canvass that which is manifestly untrue in *nature* only creates disgust in the beholder. The architect who creates with certainty that which shall satisfy the eye of the painter has attained one of the highest qualifications of practical knowledge in his profession.

I have sketched slightly the three different effects referred to: they are each positive in their character, and distinct from each other.

The first with the *dark* in the centre, surrounded by light; the lower one with *light* in the centre, surrounded by *dark;* the middle one occupying the *medium* between light and shade, and having nearly equal portions of light and shade crossing each other.

You will observe that by one of these effects or the other, everything in nature must be seen; for if we look *towards* the light, any object between us and the light must be dark; and if we look *from* the light, or in the same direction as light itself, the objects will be more or less light according to their local colour; and, by looking *across* the rays of light, we shall have, of course, side light, with about the same quantity of shade on all objects within our view.

In the treatment of such a subject as the lower one, care must be taken that the centre light, which is actually the building, should spread itself out—apparently in the easy enjoyment of the space about it,—for nothing can look worse than a square band-box-looking house in such a situation. This object may generally be effected by the offices and outbuildings being partially brought into view, and by hiding their exact termination, giving an appearance of extent greater than they actually possess. The distribution of shadow on the central mass of light will determine the character of the structure; and if the nature of the requirements will admit of the greater mass of shadow being brought into the centre, with subordinate portions to the ends, and led off by the windows and minor details, the effect never can be bad. But in this mode of composition, the great point to guard against is the *equality of shadow;* for if a number of shadows of like force cross and recross this light, the brilliancy or breadth must be diminished and the general effect neutralised. The shadows should, therefore, if I may use the expression, be *clustered* rather than distributed over the whole surface, for if we look on a building charged with ornament in all its parts, we may at first sight be struck by the amount of labour bestowed on it, but it will fail to satisfy the judgment when viewed as a whole, because it wants breadth of light and depth of shadow.

In some buildings, such as Wollaton Hall, Nottinghamshire, for example, much undoubtedly depends on the sky line, or outer form of the building; but if deep recesses are formed within this shade, they will, being darker than the whole mass, throw out the face of the front as in reflected light, and if boldly executed will always create a rich and imposing effect. It is evident that thin and trifling ornament would be lost here. In working up to this principle of light and shadow, all materials and objects that will receive light in front, such as stone terraces, statues, or broad gravel walks, will not only heighten the effect by reflected light on the surface, but give cheerfulness to the rooms within; while grass or any dark material on which the shadow falls would, independently of the chill and damp of green adjoining the north side of a building, tend to neutralise and destroy the effect.

It is seldom, however, that we have the opportunity of making so diversified an outline as that of Wollaton Hall, and we must, therefore, depend more upon the *plan* for giving that diversity rather than the *elevation;* and in considering the north front of a building, it is therefore desirable that the face should be broken up so as to receive the sun into the masses of shade. These projections will receive the south-east and south-west sun, which will not only, by its positive light, but also, by its reflected light, enliven the whole of the north front. Everything, therefore, that tends to give a deeper shadow *within* the *boundary* of the shade,—by which the forms within will be relieved,—and every break of light on the outside, or edge of the shade *itself*, will tend to improve and give intensity to this effect.

I would here point out that each shadow has its centre, or a portion is darker than the mass; as also with the lights, *some portion* is lighter than the rest. And it is this quality of concentration, or of giving a focus to both the lights and the shadows, that gives *power* and *richness* to all the natural objects: and inasmuch as we follow out *this principle* in our works, they will be so far removed from *flatness* and *neutrality* of effect.

It is evidently a practical truth that to prevent confusion of ideas, the eye requires a certain degree of repose in *parts* of every composition: they are the quiet resting-places of the mind, from whence each portion is classified and rapidly understood. The *reservation* of portions which shall be *plain* and *simple* in their character is therefore of quite as much consequence in every design as the *addition* of enrichments; and this is not only applicable to ornament alone, but to the general effect of the whole. Ignorant persons, in their desire for display, heap one thing on another in the greatest profusion, in the vain expectation of captivating the mind by reckless expenditure. They only create a costly confusion, which, to cultivated taste, is so much the more disgusting from its vulgar pretensions.

A perfect and certain knowledge of how and where to bring these parts together, so that one harmonious whole shall first strike and interest the observer, and afterwards continue to satisfy his judgment, ought to be one of the leading points of architectural education

I grant that to the student this will not appear, nor will it ever be an easy task. Perfection in any branch of learning never is easy. But that is no reason why the architect should rest satisfied to leave the arrangement of light and shade as a matter for chance only to regulate.

If there be such a thing as pre-eminent beauty and fitness in works that have been the admiration of ages, surely there must be a cause for such beauty, and a reason for such fitness. I would say, then, let us never rest until we find out this cause. Do not be so servile as to copy these works, but find out the cause that gives them the effect we admire, and you have the master-key in your own hands. This is genius,—this is the very foundation of taste.

The architect who practises his profession conscientiously, will never consider his labour in perfecting his building; but from the habits and usages of the profession, and perhaps from allowing themselves to rest on their purely constructive ability, there are some who never appear to go to *first causes* in the higher branches of their art, and who sometimes permit themselves to be talked down by amateurs. The consequence is, that any appearance of original thought is put down by the constant cry of, "Where's your authority?" For my part, I never could understand this cuckoo cry. Is it that we are labouring to deceive the future antiquary?

In the arrangement of light and shadow, the colour of the material must be taken into consideration; for if the building be of a very dark colour, it will be difficult to give it a pleasing effect.

The use of bricks appears to be coming into fashion from various considerations; but we should, I think, pause, before we allow the indiscriminate use of this material in external decoration. In situations that are tolerably free from the effects of smoke, a great degree of beauty may be attained by the judicious mixture of red and white, and other bricks. I say *judicious* mixture, for otherwise they are apt to appear like patchwork; but, if properly used, they always look well in the *country*, from the harmonious effect of red and white with green. But in London their colour is soon lost in one dingy coat of black, for they have a peculiar tendency to retain the soot, which rain washes *into* them rather than *off* them. The common stock brick, as used in London, is therefore fatal to anything like breadth of effect.

Portland-place in its *dimensions* is certainly one of the finest streets in London, but its really noble space is scarcely redeemed from meanness, by reason of its houses being built chiefly of brick.

But there is a material which by its general use in this metropolis has helped us over many difficulties; and yet in raising my voice in its favour, I may, for ought I know, be getting myself into difficulties,—for so much has been said about *truthfulness of material*, and the very phrase itself carrying with it a conviction of so much virtuous intention, that if I am inclined to receive it in this instance as containing more of *sound* than of *sense*, I fear I shall be at once put down as one so totally blind as to be incapable of receiving the new lights now breaking on our intellects.

Among the many strictures put forth with much authority by certain amateurs, cement and all stuccos for external decoration come in for unlimited abuse, and are held up for universal condemnation. I must say that this reprobation of a material which has redeemed London from the dingy monotony of brick, appears to me somewhat unreasonable. Those who remember it in the time of George III. will not, I think, be among the number who would restore its soot-begrimed walls of brick, however their consciences may suffer from the use of stucco.

Stone is certainly of all other materials the most beautiful and harmonious for the display of light and shade; but when stone is not to be had, stucco comes nearest to it in appearance: it preserves the work beneath from decay: it keeps out damp: it is easily restored; and at a trifling cost will look cheerful and new.

Now, in the name of common sense, why are we to forego these advantages? Is it because one or two crotchetty people would persuade us that we are telling an untruth? Then let us tell the honest truth, and say, "I use it because

I prefer *cheerfulness* to *gloom*, and it is the only thing I can get to answer that purpose." Whether this plain view of the case will satisfy these sticklers for truth at any price, or not,—it must be admitted that London requires a light material for architectural effect; as, from the nature of the climate and the smoky atmosphere, we shall always have plenty of shade.

In the treatment of street architecture, it is necessary that the horizontal lines of shadow should be kept so far of one uniform height as to satisfy the eye as to their extent. I mean that this uniform line may be both too long and too short. It is too long when, as in the city of Turin, the constant repetition of the same height of cornices becomes most tiresome and monotonous. It is too short, when (as is frequently observable in London), each small frontage asserts its independence in perfect disregard of its neighbour; and the result is, like many other cases of want of unanimity, that it is complete only in its confusion and total want of general effect.

Perhaps the best example that I can point out as the nearest to perfection in street architecture is that of the High-street in Oxford. Here there is just sufficient horizontal shadow to aid the perspective, and to satisfy the eye in comprehending each building as it rises to view in passing from one to the other,—enough variety to excite the imagination, and an alternate play of light and repose, that has always produced the most striking effect even to the casual observer.

I have said that colour itself may have much influence on light and shadow in architectural composition, for it will be seen immediately that *red* and *blue* will tell much more as shade than *yellow* and *white*. Hence, wherever brick is used, it will serve to direct and concentrate the attention on either the yellow or the white; but wherever used, it should be so blended by gradual means into the other colours as to prevent anything like a chequered appearance, and only to appear what it really is, merely ornamental material.

Thus far I will heartily agree with our new lights, and will hold up *my* feeble taper in their company; but of all the false tastes ever imposed by the tyranny of fashion, or the blind notions of the antiquary, that of bedaubing sculptured decorations with indiscriminate blue, yellow, red, and green paint, is the most barbarous. It is gilding refined gold;—nay, it is putting a baser metal than gold over gold itself. We laugh at the savage who, in his ignorance of the beauty of form, disfigures those limbs that are the admiration of an enlightened mind; but that *we* in the *nineteenth* century, with all our boasted refinement—with our progress of mind and manly self-dependence—should allow ourselves to be imposed on by the vulgar notion of picking out a beautifully executed design with the most gaudy pigments that can be obtained, is to me most unaccountable. I know that here again I am on dangerous ground. I feel that I am rowing against the stream—that my glimmering lamp is in danger of being puffed out by the overwhelming authority of antiquity; but, if we refer to antiquity for precedents and beauty, history will show that even here was a gradual development of that perfection which we admire, and we shall as surely perceive that so soon as the *greater principles* of art were lost sight of, art itself became debased in the hands of our forefathers.

Nothing can, however, be further from my intention than to condemn the use of colour altogether, for I am too well aware of the glorious combinations of colour in nature, to neglect or think lightly of her schooling; but sculptured stone is not the place for it in any architectural composition. It is allowing the labourer to destroy the work of the master. Who would think of painting the Apollo Belvidere, or put on him red drapery, and nicely paint his eyes, lips, and eyebrows? No! The hand that executes a piece of ornamental sculpture stands in no need of colour to pick out the groundwork with red, blue, or green. Such an act is like placing an elegant poem in the hands of the town-crier.

The architect requires only the delicate gradations of light and shade in his composition to work out his meaning; and this will harmonize with, but never obtrude itself on, the general features of the design.

Returning to the three principles of effect already alluded to, they may be modified to almost any extent, and so that a chief light is reserved, others may be introduced, should the subject require them. Of course the greater the quantity of dark round a light, the brighter that light will appear. The value of shadow, therefore, as a means of giving breadth and brilliancy of effect should not be forgotten in the choice of a site, especially for such a thing as a mansion in the country. Here the very shadows of the house will appear light and delicate in their colour, if the shadow of foliage or any dark object is seen in their vicinity. Indeed, the choice of a background is of much more consequence in architectural effect than is generally supposed. In many instances we see proprietors, in their wild rage for building, sweep away everything before them, and are afterwards obliged to plant round their houses trees that can never serve the purpose for which they are planted within their lifetime.

Light and shade, therefore, in the choice of a site in the country, is a point of the utmost consequence to the architect; for, however good in design or arrangement, he will find a difficulty in making his structure interesting if he be completely isolated from every other object; and I would here recommend to the student, that instead of too much line and rule work, he should accustom himself to sketch his designs *always* in perspective before making his geometrical elevation, together with the situation in which it is to be built. This will at once test his idea, and save him much trouble in the end, of course always supposing him to have an idea.

Perhaps I ought not to leave this subject without a few words on interior effect. In this I fancy we are somewhat excelled by our continental neighbours, especially in modern works: at all events the mode of admitting light to the interior of our public and private buildings is worthy of more consideration than it generally obtains; for, provided a sufficient quantity of light is supposed to be admitted for the uses of the building, little attention is paid to its picturesque or artistic effect; and yet we shall find that the comfort of a dwelling, or the interior beauty of a public building, consists more in the agreeable distribution of its light than we at first suspect. It will be found that in all cases where the positive light from the sky can be kept off the eye, the architectural proportions will be seen to the greatest advantage; or, in other words, whenever the actual source of light can be so concealed as to allow its rays to illuminate the particular object most interesting or central, the most forcible and agreeable effect of light and shade will be the result; for, as in the position we ourselves occupy we are in the shade, the principal light will be surrounded by shadow, and by its brilliancy alone will illuminate by a sweet and soft reflection every thing around it.

One of the effects may also be produced in another way, which is by the introduction of light from the top of a building, as in the magnificent church of the Madeleine, at Paris, and also in the Pantheon, at Rome, where, by its admission in this manner, we not only have a flood of light passing through the centre, but every point of the architecture is illuminated, and throws broad but softened shadows throughout the building. I once saw this latter structure, by a sudden rising of the Tiber, flooded by its waters, and the whole height of its splendid architecture reflected as in a mirror. The effect had all the characteristics that Burke describes as necessary to the sublime and beautiful, viz. height, depth, and space. From the many advantages arising from this mode of lighting buildings from the top, the wonder is that it is not more frequently adopted.

In our own churches we find so little attention paid to their being agreeably lighted, as frequently to have a large east window glaring full in the eyes of the congregation. The consequence is, that the most painful sensation is felt in attempting to look into the gloom that surrounds the communion-table, or to witness the service; and in many of these structures the head of the clergyman, while preaching, can only be distinguished as a dark object between the congregation and the light. This does not require argument to prove that it is totally wrong. The light should be thrown on the communion-table, and the objects about it, and enough on the head of the preacher to show the expression of the face, which, if not absolutely necessary to the thorough comprehension of his meaning, prevents the mind from being disturbed by the constant effort to penetrate the gloom without effect.

In our modern churches our architects have, by their adoption of a subdued light in their glass, acknowledged the principle that there may be too much light in an ecclesiastical building. By thus subduing the light, a soft and quiet effect is certainly attained, but at the expense of retaining too much neutrality. A small quantity of pure light properly introduced would give point and brilliancy without destroying the sober tone of the whole.

In a church built by myself at Highbury, a few years since, I have endeavoured to carry this principle into execution. I am of course greatly indebted to the stained glass for the means of doing so, and I would here call your attention to the value of colour in this situation. The stone carving on the screen gives additional richness to the colour, while the deep rich tones of the colour itself adds another charm to the delicate pearly shadows and sparkling lights of the stone carving. It is in such situations as this that the one will so powerfully assist the other. It may be truly said in regard to art, that colour put into unskilful hands is like placing sharp instruments in the hands of a child,—a hundred to one that some mischief is done. Should any be doubtful of the truth of this, let them explain why so many gradations exist between the works of a *sign painter* and the productions of a *Titian*.

Should these observations be the means of inducing the student to think more of the *principles of design*, and less of the mere act of copying, which never will lead to great things, my object will be accomplished. Let him imbue his mind thoroughly with the good and the beautiful in each particular style—for all have their beauties,—and I am confident there is talent, energy, and originality of thought in the present generation sufficient to stamp the present era with its own peculiar mark,—which shall be in no wise inferior to any other within the history of our profession.

Thomas Allom.

FOREIGN INTELLIGENCE.

Constantinople.—A Relic of Delphi.—There have been made here, of late, excavations between the two obelisks on the Hippodrome, for uncovering the foundation of the serpented bronze column (*Schlangensäule*). There can be no doubt that this is the same column which bore once in Delphi the golden tripod which the Greeks had consecrated to the Delphic Apollo after the victory over Xerxes. The golden tripod was subsequently taken away by the Phocœans, but the bronze column was still at Delphi, in the time of Pausanias. Later still, even, the column was brought by Constantine to Constantinople, and exhibited on the Hippodrome, and when lately the ground around it was excavated, it was found that it stuck two mètres under the surface of the soil. On the spirals of the serpents, which constitute this column, some inscriptions were found, but much corroded by the *errugo*. On the second spiral from below is to be read, "*Amprak. . . . Fo . . .*," and on the seventh spiral, "*Tenio.*" According to Herodotus, the name of the *Tenians* was inscribed on the tripod of Delphi.

Paris: New Works at the Ecole Militaire.—This interesting building is receiving great additions, under the directions of the Government engineers. Two pavilions will be added, forming the continuation of the façade on the Champs de Mars, being 101 mètres long and 15 mètres deep. They are one story high, and are surmounted by a pediment and an attic. The sculptures of the pediment represent the imperial eagle, &c. The edifice and the lateral galleries of the Cour d'Honneur, have been completely restored, and the fine railing of the Cour Montant equally completed. Other improvements have thence resulted, for the whole

space of the Champs de Mars, and a number of houses, which would have masqued the new pavilions, have been demolished. Thus an area of 80,000 square mètres has been added to the immense place, which borders on the south of the palace of the Ecole Militaire.

Paris: Assyrian Sarcophagus.—The sarcophagus of the king of Sidon, Asmunazar, which had been presented to the French Museum, by the Duke de Luines, and conveyed from Beyrout to Paris, has been placed in the Asiatic collection of the Louvre, near to the Phœnician sarcophagus, of white marble, which also has been presented by M. Peritié, at Beyrout. At the last sitting of the Institute, M. de Luines read a paper on the sarcophagus of Asmunazar, which contained a translation of the Phœnician inscription, engraved in fine characters on the lid, and containing the name of the king and his ancestors.

Cologne: Mural Paintings. — The Provincial Government of Cologne have ordered M. Hohe, professor of drawing, to copy and trace the old mural paintings of St. Gereon's Church. They belong to the thirteenth century, and are conspicuous for correct design and brilliant colouring, and represent figures of saints, above life size; containing also the apocalyptic signs of the evangelists, who stand in the niches of the chapel. The surrounding ornaments are in the Romanic character, passing somewhat into the Gothic.

Munich Art-Union. — This institution numbered, last year, 3,330 members, who paid a subscription of 39,141 florins. The Union purchased during that period, 117 articles of art, amongst which were mostly oil paintings, for which they expended 25,000 florins: the remaining 3,500 were expended in members' prizes.

Vienna.—The Second Spire of St. Stephen's.—The windows of the south gable of the Vienna Cathedral having been restored, the completion of the second spire is in contemplation. To lessen the expense, it is intended to erect an iron framework, in which the masonry is to be inserted; the same process (according to our informant) as was resorted to in the restoration of the other spire in the years 1839 and 1842. The expenses of this vast undertaking are estimated at 500,000 florins, but the Common Council of Vienna are willing to contribute 15,000 annually during the whole time of the rebuilding.

The largest Locomotive in the World—the Duke of Brabant, constructed at Seraign, and which attracted so much notice at the Paris Exhibition, is now at work at Charleroy. Its weight is 6,000 kilos, and it can move fifty waggons of 10,000 kilos each—about a million of pounds.

PROVINCIAL NEWS.

Kingskerswell, near Torquay.—A contract for the erection of parochial schools has just been made with a local builder for the sum of 487*l.* They will be commenced forthwith, and carried out according to the designs of Mr. J. W. Hugall, of Cheltenham.

Romsey.—The nave of the Abbey Church of Romsey, which had been closed for many months during the construction of a new roof over it, in consequence of the utter decay of the old one, was last Sunday opened again for public worship. The new roof is similar in its design to the ancient one, which had from time to time been lowered in its pitch, as the ends of the timbers became decayed. The roof is now framed to the original height, and gives great dignity to the building. It is internally of a waggon-headed form, divided into panels by oak ribs and bosses as in the previous roof. Messrs. Gover and Fluder were the contractors, under the superintendence of Mr. Ferrey. A new vicarage-house, in the Mediæval style, is also nearly completed from the design of Mr. Ferrey.

Cambridge.—In allusion to some misapprehension said to exist in this city as to the expense of laying down supply pipes by the water company, and to the fact that the company, at their own expense, lay down the service pipes to the fronts of all houses or premises on the application of the occupier to be supplied with water, the *Cambridge Chronicle* says,—"We are informed that the cost of laying down the service pipes inside the consumer's premises does not exceed 2s. per yard for pipes of ½ inch bore, and 3s. per yard for pipes of ¾ inch bore, of the weights prescribed by the company's regulations; and that the average cost of laying on the water into houses in Barnwell and Castle-end, where the water is most required, is under 15s. to each consumer, and in many cases much less."

Birmingham.—Mr. Adderley, M.P. having offered to set aside ten acres of land on his estate at Saltley, for a park and recreation-ground open to the public, active steps are to be taken to render the offer available, to form a Working Man's Park Association, and take the management of the park. A large quantity of land is reserved all round for building purposes, but until built upon will form the play-ground. Mr. Adderley intends to erect at the principal entrance a museum and reading-room, at a cost of 1,300*l.*

Liverpool.—The Town Council have given powers to the Free Library and Museum Committee to raise 20,000*l.* the interest to be paid out of the Museum Rate, for the purchase of land opposite St. George's-hall, for the erection of the proposed new buildings, towards the construction of which Mr. W. Brown has promised 6,000*l.*

West Hartlepool.—The market buildings will be of considerable size, to allow for the future extension of the town, which is rapidly increasing in population and house property. The façade is of stone and iron. At each end of the building there will be three separate entrances, under archways, formed in an Ionic façade. The roof is in three spans, and circular in form.

York.—The contractors for an extensive drainage of this city, Messrs. Swire and Blair, have completed their contract, to the satisfaction, apparently, of the authorities; but scarcely to their own, we should think, since they must be heavy losers by the contract. They have constructed 5,061 yards of sewers, at a total cost to them (including some extra works) of 8,369*l.* according to the local *Herald*. The sum for which they contracted to do the whole (exclusive of the extras) was 3,550*l.* Their tender was the lowest of eight, the others ranging from 4,116*l.* to 6,797*l.* 3s. "Not having tried the strata previously to having given in their estimate [did *any* of the competitors incur sufficient expense for such a purpose on the mere chance of obtaining the contract?], they met with unforeseen difficulties, particularly on the Mount." Nevertheless, they honourably fulfilled their contract; but the Corporation in consideration of difficulties which it is obvious not one of the competitors fully appreciated, contributed an additional sum of 641*l.* which, with 250*l.* already paid on account of the Mount drainage, made up the sum of 891*l.* which the contractors had expended on that portion of the drainage. In all, the contractors appear to have received 5,067*l.*; so that the loss on the outlay in the contract amounted to 3,302*l.* exclusive of their own labour and anxiety.—Amongst other great improvements of this city deemed desirable, the paper already quoted specifies a spacious Market-house.

Huddersfield—National Schools, with teacher's house, are being erected at Milnsbridge, a manufacturing village near Huddersfield. Within the last few years the increase of population has been so great, that the present schools in connection with the church have been found inadequate to meet the wants of the locality. The new schools consist of a general school, 60 feet by 30 feet, for mixed classes of boys and girls, with a class-room attached, and calculated to hold 280 children; an infants' school, 44 feet by 21 feet, for 120 children; making a total accommodation for 400 children; and a teacher's house, containing six rooms, arranged on two floors: this is placed in the centre of the building between the two school-rooms. The building faces the Manchester-road, and stands upon one-third of an acre of land. Mr. E. W. Tarn, of London, is the architect; and Messrs. Hampshire, of Huddersfield, have contracted for the whole building (except the carpenter's work) at 768*l.* The carpenter's work (including desks and other fittings) is contracted for by Mr. Youdon, of Huddersfield, at 299*l.* 10s. The style adopted is the Early English. The total cost, including the site, will not exceed 1,300*l.*

Dundee.—Exertions are being made here for the realization of a large public hall, which is much wanted. The *Dundee Warder* in reporting a meeting held on the subject, urges the propriety of looking a little more to the outward aspect and ornamental character desirable in such an edifice, than some of the mill-owning gentlemen who take an interest in the project seem to contemplate. A hall capable of accommodating 1,500 to 2,000 persons appears to be what is required; and the *Warder* remarks, that 3,000*l.* ought to be the means aimed at, including 500*l.* or thereby, for sightly frontage. The site suggested is one of two near Reform-street.

THE CITY OF LONDON CEMETERY, AT ILFORD.

WE had proposed to withhold our concluding illustration of this cemetery, namely, the Entrance Gateway, Lodge, and Residence, until it was opened; but this event still seems so uncertain, that we will not postpone the view any longer. The commissioners appear to be in great difficulties, mainly arising out of the construction of the Act, which authorised parochial burial boards to lay out cemeteries for their respective parishes, and for the protection of the clergy and church officials, gave those officers powers of dissenting, objecting, or negativing with regard to fees, and in other respects. This might have acted very well where the Burial Board was constituted for one parish only, and where, consequently, there was but one clergyman, sexton, and clerk, to consult about their fees and other things; but as the Commissioners of Sewers have laid out a cemetery for the whole City, which comprises more than a hundred parishes, to nearly the whole of which parishes there are distinct clergymen and other officers, and as the consent of the whole of these vestries is requisite to fees and other respects, it must be seen what difficulties lie in the way of a comfortable adjustment of the affair.

Were we to assert that the question of fees is really the sole obstacle to consecrating and opening, it would be vehemently denied by many; but it is singular that no obstacles showed themselves until the question of fees to the clergy was entered upon. The commissioners offered a graduated scale of fees, but this did not appear to be satisfactory, and immediately afterwards the obstacles all sprang up in a bunch. The ground could not be consecrated because there was a bridle road, used principally by one or two gentlemen, who go through on horseback occasionally, although this had been thought of no consequence before. Another objection about a rent-charge on the whole of the Earl of Mornington's estate in Essex was made; then came the objection to the commission appointing a chaplain, and a host of others, into which we may not enter. If in some parishes the original fees are insisted upon (and which, perhaps, legally can be done), as much as 4*l.* 5*l.* and 6*l.* will have to be paid for one interment, and of course, in such case, that body would not be buried in the City Cemetery when they could avoid it by going to another cemetery; and if every one of the 101 parishes were to have a different scale of charges, nobody who wished to bury a body in the City Cemetery would know what they would have to pay for it. Thus the matter stands. The offer of 6s. made by the commission for each body has not yet been accepted. The commission have promulgated their table of charges for interments among the various vestries; and each of the 100 vestries, clergymen, churchwardens, clerks, and sextons, are now discussing and criticising. All the difficulties, we believe, are nearly got over but this. Probably the commission will be obliged after all to go to Parliament, to get the Legislature to fix the scale of remuneration to the clergy and others, and to enable the Burial-Board to do the best they can for the citizens.

Other views and particulars will be found at p. 578, vol. xiii.; and p. 30, in present volume: we need scarcely repeat that Mr. Haywood was the architect.

ENTRANCE GATEWAY, CITY OF LONDON CEMETERY.—MR. WILLIAM HAYWOOD, ARCHITECT.

CHURCH-BUILDING NEWS.

Lincoln.—The Wesleyan chapel here was re-opened on 7th inst. The lower part of it has been remodelled, the gas rearranged, a new organ introduced, and the whole throughout repainted and decorated. The standard lights in the gallery have been removed, the gallery, with the body of the chapel, being now lighted from the ceiling, in which a sun-light is fixed, "giving," says the local *Chronicle*, "the effect of a mid-day sun." The heating apparatus was manufactured by the patentees, Messrs. Longbottom, of Leeds. These improvements and alterations have cost 1,111*l.* The general works have been executed by Mr. C. Ward, builder, and the painting and decorations by Messrs. Pilkington and Scott. The whole has been carried out under the directions and superintendence of Messrs. Bellamy and Hardy, of Lincoln, architects.

Hastings.—The town council have recently awarded the premium of 10*l.* offered for the best design for laying out their proposed cemetery, to Mr. H. Carpenter, of Brighton, architect. The episcopal and dissenters' chapels, with waiting-rooms and vestries attached, will form one block of buildings. The plan also contemplates the construction of catacombs at the end of the principal avenue, surmounted by a terrace, consisting of a series of Gothic arches in the Decorated style.

Cowes.—The tenders for the wall round the cemetery were as follows, according to the *Hampshire Advertiser:* — Phillis, 195*l.* 15s.; Cox, 197*l.* 10s.; T. Wheeler, 209*l.* 10s.; Sibick, 246*l.* 16s.; Ball, 260*l.* 10s.; Hardy, 265*l.*; G. Wheeler, 275*l.*; R. Taylor, 295*l.* That of Mr. Phillis, of Southampton, being the lowest, was accepted. The tenders for drainage and road-making were considered so excessively high, that they were severally declined, the high price being attributed to the mistake of glazed pipes having been inserted instead of drain-pipes.—— At a meeting of the board last week, Mr. Pritchard's tender for draining the cemetery and making the roads was accepted, at 152*l.* for the principal portion and 215*l.* for the ground about to be enclosed; and contracts are issued for the erection of two chapels, lodge, and receiving-house.

Sherborne.—At a recent meeting of the Local Burial Board, various works were let;—Mr. Stephens, for making roads, laying out and planting, draining, fences, &c. 631*l.* 17s.; Mr. Guppy, for building the Episcopal chapel and lodge, 812*l.* 15*l.*; Mr. Down, for building the Dissenters' chapel, reception-house, lych-gate, and entrance, 676*l.* 10s. 8d.: total, 2,121*l.* 2s. 8d. The board, having various tenders, selected the above three, being about 30*l.* below all other classifications they could make. The chapels are Early English, the Episcopal having a bell-turret, the Dissenters' a wheel window, and both alike in size. The board have commenced the works.

Rochdale.—The new church of St. Alban's, Rochdale, was consecrated by the Bishop of Manchester, on Saturday in week before last. The architect was Mr. Joseph Clarke, of London. The edifice stands on an eminence at Pinfold, and has a spire 140 feet high. The windows throughout, excepting a large east window, are glazed in grissaille patterns. Mr. Hardman has prepared sketches for the east window from the designs of the architect. The altar-table, standing on a floor of encaustic tiles, with which the whole of the chancel is laid, is of oak, carved by Mr. H. Ringham, of Ipswich. The roof of chancel is waggon-headed and panelled. It is intended, at some future time, to introduce colour into this roof, as well as more generally throughout the church, a specimen of which has been shown on the nave roof. The nave has north and south aisles, the tower occupying the south-west angle, and serving as a porch. The church is filled with low open seats, worked in pitch pine, stained. The nave floor is paved with Peake's tiles. Flues are constructed for heating the church. At the west end it has been found necessary to erect a gallery for children. The stone carving throughout the church is by Mr. Bonehill, of Manchester. Mr. Thomas Booth was clerk of the works. The tender for the building was 4,100*l.* The walls are of parpoint, with Huddersfield stone for all external dressings, and Bath stone for all internal work. The renovation of the old parish church, under the same architect, will shortly be recommenced. The contractor, during the winter, has been framing the new nave roof, and this, including the re-setting of the centres, which are insecure, and re-building the clerestory walls, will complete the second portion of the works.

METROPOLITAN BOARD OF WORKS.

AT a meeting on Friday 15th, Mr. John Thwaites, the president, in the chair, the committee recommended, in the engineers' department, three assistant engineers, at a salary of 350*l.* per annum each, with 50*l.* each as travelling expenses; six clerks of the works, at three guineas per week each; six draughtsmen, four at three guineas, and two at two-and-a-half guineas per week each; and four engineers' clerks, the first at 175*l.* the second 150*l.* and the third and fourth clerks 100*l.* per year each. In the architects' department two clerks were recommended, the first at 200*l.* and the second at 150*l.* per annum. The report was ultimately adopted. As to the salaries of clerks in the secretaries' department, the second first-class clerk's salary was raised from 300*l.* to 350*l.* per annum, the same as the first clerk; and the salaries of the second and third clerks were reduced to 185*l.* and 175*l.* Mr. Collinson's motion,—

"That, taking into consideration the greatly increased and daily increasing amount of traffic over London-bridge, and in Wellington-street, and High-street, Southwark, and also considering that there is a sum of 80,000*l.* arising from the coal duties set apart for making improvements in Southwark, it is most desirable that immediate and active measures be taken to provide for making a new line of street from some part of the High-street, Southwark, towards the western part of the district," was put aside by a resolution, — "That the board proceed to the next business."

THE SANITARY WORKS OF CARLISLE.

THE sewers and drains for Carlisle have been completed at a total cost of about 23,300*l.* The annual rate in the pound to pay principal and interest in thirty years is sixpence. At a meeting of the health committee on the 8th inst. it was resolved, on the motion of the mayor, Dr. Elliott, "That the thanks of this meeting be given to Robert Rawlinson, Esq. C.E. for the efficient manner in which he has carried out the works for sewering the town, and the exactitude with which the original estimate has been adhered to." This resolution of the board and town council must have been the more gratifying to the engineer as there was a violent local opposition at the commencement of the works.

For ourselves, we are glad to find that the sanitary works of a town can be brought to a close satisfactorily for something near the original estimate: we have been troubled with grumbling more than enough, and are pleased to find a local board finish without a complaint. Sanitary improvement has been fairly started: opposition may delay, but cannot stop it.

THE DESIGNS FOR AN OMNIBUS.

THE Directors of the London General Omnibus Company having offered a premium for the best design for an omnibus, received a large number of drawings and models, and appointed three gentlemen not connected with the company to decide as to their respective merits. The following report, which has just been addressed to the company by the referees, will tell its own story:—

"Gentlemen:—Acting in accordance with your request, as adjudicators upon the designs for an omnibus, sent in reply to your offered premium of 100*l.* for the best, we have had before us designs and models submitted by seventy-five competitors. Several of these having been deposited after the date fixed in your advertisement, and on other grounds not coming within the terms of the competition, were at once put aside. The remainder we have carefully examined with reference to the requirements set forth by you, and to the police regulations; and we have first to express our regret that, although many of the propositions display considerable ingenuity, and offer here and there improvements, we do not find any one design of supereminent merit, or calculated, in its present shape, to afford that increased amount of comfort and accommodation your company, with praiseworthy foresight, desires to give the public, and which will doubtless be looked for at your hands. Inasmuch, however, as we are required to select one of the designs as the best amongst those submitted, considered with regard to your stipulations and wants, we beg leave to point out the design No. 64, sent in by Mr. Miller, of Hammersmith. Inquiry of Mr. Miller, and the examination of a full-sized omnibus built by him (after arriving at this determination), have shown us that if his intentions were more completely expressed in his drawing than is the case, the design would be more worthy of the premium. We must repeat, that we find no design that we can recommend for adoption intact, or which, to speak truly, is worth the premium offered; although there are points about some of the designs which, being combined, would aid in producing what you and the public desire,—a light, commodious, and well-ventilated omnibus.

(Signed) "CHARLES MANBY,
GEORGE GODWIN,
THOS. WRIGHT."

Several architects were amongst the competitors (Messrs. Salvin, jun.; Truefitt; Wilson, of Bath; &c.); and there were suggestions from Capt. Fowke, Capt. Wilson, Mr. Lott, and others unconnected with the trade.

Mr. Clemence's "Excelsior" (No. 20), Mr. Ayshford's saloon omnibus, Rock and Gowar's design, Rimmel's (No. 22), and others have good points.

Those designs in which any considerable ingenuity is displayed are mostly impracticable.

The selected design (Miller's) has circular ends, upright sides down to the seat, so as to give greater width at that point, to enable the sitter to draw back when a passenger is passing him; a well for the legs, narrower than the upper part, which permits the body of the carriage to hang nearer to the ground than in those ordinarily in use; and a simplification of the springs.

THE MEDALS OF THE ROYAL INSTITUTE OF BRITISH ARCHITECTS.

AT a special general meeting of the Institute, held on Monday evening, February 18th,

The Royal gold medal was unanimously awarded, subject to her Majesty's gracious approval, to William Tite, Fellow, F.R.S. M.P.

The Soane medallion was awarded to Mr. Leonard R. Roberts, of Sackville-street, Piccadilly, for his design for a town mansion.

A medal of merit was awarded to Mr. Thomas C. Sorby, of Guildford-street, Russell-square, for his design for Law Courts.

A medal of merit to Mr. James Blake, of Handsworth, Birmingham, for his design for a town mansion.

And the silver medal of the Institute to Mr. T. A. Britton, of Camden-town, for an essay on "The Timber growing Countries of Europe and America."

The students' prize in books for monthly sketches was awarded to Mr. C. N. Beazley.

The subjects for competition for the current year were announced. Among them are a metropolitan hotel, and illustrations of mediæval buildings in Ireland and Scotland, hitherto unpublished, with descriptive particulars.

THE CONDITION OF THE THAMES.

INSTITUTION OF CIVIL ENGINEERS.

IN the course of the discussion of Mr. Robinson's paper "On the Past and Present Condition of the River Thames," Jan. 22nd and 29th, one of the fallacies of the paper was shown to be the assumption of the inability or the unwillingness of the inhabitants of the metropolis to find such a sum as 3,000,000*l.* for restoring to a satisfactory state their excellent river, when it could be done by an annual rate of threepence in the pound, on the rateable value of the fixed property of the metropolis, taken at 12,000,000*l.* per annum, or a little more than one farthing in the pound on the annual income of the 2,500,000 inhabitants, which had been estimated at 100,000,000*l.*: a threepenny rate on rateable property would pay 4*l.* per cent. interest on the capital, and extinguish the principal in forty years; without taking into account any return for the produce of the sewerage, and without calculating upon any augmentation of the population and property of the metropolis, although they did, in point of fact, increase 15 per cent. in every succeeding cycle of ten years.

The real cause of failure in the various plans that had been proposed for doing away with the pollution of the Thames and for improving the sewerage of the metropolis, during the last few years, was to be sought in the dissensions and divisions among the commissioners of the successive Boards of Sewers. The fierce conflict between the advocates of the "big sewer" and the "little pipe" systems, emulating Gulliver's controversy between the "big Endiens" and the "little Endiens," although, at first, amusing to the spectators, had become serious in retarding

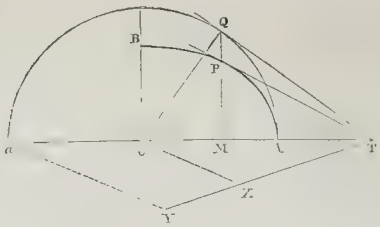
progress, and had prevented the adequate use of material which, if properly employed, was calculated to be an important agent in a great improvement, for the benefit of the public, whose health and comfort were dependent upon the promptitude and vigour of the operations of sewerage.

If the members of the Institution would unanimously insist upon the impropriety of permitting any sewage matter to be poured into the Thames, within a certain distance of the metropolis, the calm but confident expression of their opinion would carry conviction to the minds of the public. Let the true, scientific, and practical principles be so settled, and the public would readily supply the means for execution. The people did not like filth, and would not tolerate it in any form; nor did they like having the tax-collector's hand in their pockets too frequently; but for the sake of cleanly homes and wholesome air they would pay handsomely, provided the matter did not savour of a job.

The question,—to whom did the river belong, and who was to blame for its present condition? came under consideration, and the claim of the Crown was strongly combatted. The citizens naturally resisted so monstrous a claim: they asked to have the question tried by the short and inexpensive process of the Common Law Courts, but were introduced to the Lord Chancellor, before whom, during the last twelve years, there had been already executed more parallels, zig-zags, and other tortuous approaches and exhibitions of strategy, than before Sebastopol, without ever yet arriving at the stage of examining a single witness, or ascertaining one solitary fact.

The Corporation proposed to place the whole management of the river in a smaller committee of their own body, under the control of an Act of Parliament, and to borrow upon their own landed property 300,000*l.* to aid the execution of the plan.

This noble design had, however, been put in suspease by the Crown lawyers, who had filed an information, and obtained an injunction to stop the works. They sought to wrest the right to the soil of the river from the Corporation, and claimed to have the improvement fund as part of the hereditary revenues of the Crown, to be applied to the private uses of the Sovereign, instead of appropriating the whole fund, as the Corporation proposed, to the improvement of the river. The Corporation had strenuously resisted this; and the suit had been pending twelve years, during which time the river had been suffering from the want of that vigorous treatment which the Corporation were disposed, under the advice of the engineers, to have applied to it out of their own funds.



If the plan recommended by Mr. Walker and his colleagues was not a proper remedy for existing evils, a better system should be sought for at the hands of competent advisers, and it ought to be carried out by the Corporation, or the Crown, or some other authority; but the Corporation could not be expected to expend any more money in the state of uncertainty created by the Chancery suit. They had already indorsed the bonds of the navigation fund to the extent of 150,000*l.* the interest of which a falling revenue was not now sufficient to pay; besides which the Corporation had advanced above 60,000*l.* in removing shoals and other improvements, even whilst they were compelled to waste a large sum annually in law costs.

It was difficult to conceive how any objections could be raised to a plan so evidently for the improvement of the river and the benefit of the metropolis, without adding to the funds or the patronage of the Corporation. Yet there was every appearance of the suit being interminable, because in reality the question did not relate to the Thames alone. If the claim of the Crown could be successfully maintained, it would enable the Royal Prerogative to take possession, as its appanage, of the shores of Birkenhead and elsewhere; and then, at the commencement of some new reign, the Crown might say that such acquired demesnes, in addition to the woods and forests, and other acknowledged hereditary revenues of the Crown, were preferable to the civil list granted by the representatives of the nation, for the support of the Sovereign. This, then, was only the thin edge of the wedge, and it was incumbent on all to aid in resisting such unjust claims.

Composition for Roofing, &c.—A specimen of Lancaster's "Lignum Textile" was lately exhibited at the Streatham Gardeners' Society's rooms, and after some discussion on its merits, was admitted, says the *Notts Guardian*, to be a desirable and useful article for covering frames, houses, pits, &c. in winter. The material is described as "woven wood or veneer, dressed with some waterproof composition, which, after being passed between heavy rollers and exposed to the atmosphere, is said to become nearly as hard as metal."

GEOMETRICAL PROPERTIES OF CONIC SECTIONS.

THE ELLIPSE.*

A straight line which touches a curve at any point without cutting it, is called the *tangent* to the curve at that point, and it is the straight line which appears to blend with the curve at the point of contact. If a body in motion is compelled by any force to move in a certain curve, the moment that force ceases to act, the body will leave the curve, and move on in the straight line, which is the tangent at the point where the force ceases, supposing no other force to act on the body. This tendency in moving bodies to fly off at a tangent gives rise to the well-known force called *centrifugal force*, and is simply the natural tendency of bodies to move in a straight line, when not acted on by any external force.

The drawing of a tangent to a curve has always been considered an important problem. Suppose it required to draw a tangent at the point P, on the ellipse. Since a straight line can always be drawn when any two points thereon are found, we have only to find the point T, where the tangent will meet the axis of the ellipse, and then draw a line through P and T. To do this most readily, we make use of the circumscribed circle. Draw an ordinate to the ellipse at P, and produce it until it meets the circle in Q; then draw the radius C Q, and draw a line Q T perpendicular to C Q; then Q T will be the tangent of the circle at Q. Now it is one of the properties of the ellipse that the *sub-tangent*, M T, *for any one ordinate*, M P Q, *is the same for all ellipses having the same major axis*. Hence it follows that T is the point on the axis where the tangent at P will cut it.

If it is required from any point T on the axis of the ellipse to draw a tangent to the curve, it will be necessary to find the point M at the foot of the ordinate, and then to draw the ordinate M P at right angles to the axis. Now one of the properties of the ellipse is that C T : C A = C A : C M, or C M *is a third proportional to* C T *and* C A.

The length, C M, can therefore be found geometrically by the sixth book of Euclid in the following manner:—

Draw any line, T Y, and take T X = C A; join C X, and draw A Y parallel to C X; then X Y will be equal to the required C M; then draw M P perpendicular to the axis, and P will be the point where the tangent from T meets the curve. E. W. T.

A PERMANENT CHEMICAL FILTER.

Your correspondent will find, I think, the following simple filter answer his purpose:—

If his cistern is *deep* in proportion to its *width*, an arrangement must be made, by which the filtering materials may be supported at about *two-fifths of the total height of the cistern from its base*. For this purpose I would suggest, that a strong plate of *zinc* (or of *iron, tinned*, or *galvanized*, either coating to be thicker than ordinary), pierced in the middle with a considerable number of holes,—say, ½ inch in diameter, be made to rest upon metal or brickwork attached to the sides of the cistern. If the latter is a comparatively *shallow* one, the *bottom itself* had better be perforated, and a chamber for the reception of the *aqua pura* fitted below; but as your correspondent has not favoured me with particulars of any kind, I cannot tell what arrangement would answer *best* for *his especial case*, so I am forced to occupy more of your space, and encroach more upon my own time, and, possibly, *his* patience, than would otherwise be necessary.

* See p. 63, *ante*.

However, let the support be of *zinc, iron, slate*, or any other suitable material, and the formation of a filter is then simple enough: cover the plate for a couple of inches, with hard clean pebbles, just large enough to remain there without passing through the holes, and over this strew good, sharp *pit sand* (as little *ferruginous* as can be had), until the total thickness is six inches: the whole should then be moistened and pressed. Charcoal (about three inches) forms the next layer; it should be powdered, and sifted from all fine dust, the fragments, varying from the size of a hemp-seed, to that of a small pea, being *alone employed*: this, in its turn, must be covered by an equal thickness of fine sand and powdered *peroxide of manganese*, mixed in the proportion of three parts of sand to one of the oxide; a little pure sand being sprinkled on the top. To prevent the upper beds being disturbed by a strong current of water, some stones, or pebbles, must crown the whole.

This filter will last a lifetime: if the water is much impregnated with organic matter, the top layer of stones and sand may require changing after five or six years.

But few people know the value of commercial *manganese* as a purifier of water: it accomplishes what even *charcoal* does very imperfectly, namely, destroys all offensive matters *in solution*, as well as those *mechanically suspended*.

Mr. Lipscombe, if he wishes to make his filters *quite* perfect, would do well to try it. My late experiments have convinced me that Messrs. John Bazley White and Co.'s *Portland cement*, with a little *sharp sand*,* is the best that can be employed about a cistern: it appears to have a positive dislike to *lichens* and *confervæ*.

Wentworth L. Scott.

COST OF SITES IN LONDON.

From the great interest which you have taken in the improvement of the dwellings of the poor, and the able manner in which you have exposed their present lamentable condition, I feel assured you will admit into your columns observations on a subject most immediately connected with their improvement, and that is, the artificial state in which the metropolis is placed with reference to *sites* upon which such dwellings might be erected, and the extravagantly high prices which are demanded for them.

By a series of circumstances, which it is not necessary to review, three public bodies have become possessed of sites of great extent in three different localities,—in the east, west, and centre of London,—upon each of which suitable habitations ought to be erected for the occupation of the labouring classes. I refer to the Board of Works, which has a very large space of building ground in Whitechapel, Spitalfields, and other districts; to the Corporation of the City of London, who, in the vicinity of Farringdon-street, and the lower part of Saffron-hill, have cleared an extensive area; and to the Westminster Improvement Commissioners, in the neighbourhood of Victoria-street, who have, also, become possessed of a broad expanse of building ground.

Now, sir, what I wish to observe upon this fact, is this,—first, that these three public bodies have cleared away an almost incredible number of houses occupied by the labouring population; secondly, that they have provided no substitute for those demolished dwellings, and have never instituted an inquiry as to how or where the poor inmates have to find a home; thirdly, that the price they are now asking for building land in their separate districts amounts to an insurmountable obstruction to the erection of habitable dwellings for these classes.

The Board of Public Works, or, as they are more familiarly known, the Commissioners of Woods and

* Sand of an inferior and dirty character may be much improved by a few days' digestion in dilute sulphuric acid,—common oil of vitriol (at 1½d. per lb.) 1 lb.; water, two to two and half gallons. This will do over and over again (the sand must be well washed afterwards.

Forests, are the trustees of Crown property, and they have had extensive spaces lying unoccupied for a period of ten or more years,—and they may lie waste for ten years longer before they will make any abatement. It would be well if these trustees of the public property would seriously consider the injury they are inflicting upon a numerous portion of her Majesty's subjects, and in this respect contrast their conduct with that of the Emperor of the French, who, by direct grants of sites or money, or both, is holding out every encouragement for the erection of dwellings for the labouring classes in Paris, Marseilles, Lyons, &c.

The Corporation of the City of London, in the year 1851, had, by a vote of the court, 42,500*l.* appropriated for the erection of model lodging-houses, but nothing has yet been done.

The Westminster Improvement Commissioners have great powers, both by an original Act and by an Act obtained in 1853 for the erection of dwellings for the industrial classes, but both Acts appear, as to this object, up to the present time, a dead letter.

PHILANTHROPOS.

METROPOLITAN BUILDING ACT, 1855.

BUILDER'S NEGLECT TO GIVE NOTICE OF WORKS TO DISTRICT SURVEYOR.

IN the case of Hesketh (district surveyor) *v.* Middleton, heard at the Southwark police-court on the 16th instant, it appeared that Middleton took a wooden building in Bermondsey-street, built before the Act came into operation, the east front being uninclosed. He up put an inclosure to this front with painted canvas on boarding. In the centre was a door, and two staircases within, leading to seats which rise one above another, sufficient to accommodate from 150 to 200 persons. Opposite the seats was a stage for the exhibition of "Marionettes." All these fittings were put in by Middleton since January 4, 1856. He had brought them in his van, and had put them up himself. He advertised performances by the "marionettes" in this theatre, and at least 100 persons were proved to have been present at one time. Payments were taken at the door.

The district surveyor summoned Middleton for not having given him notice of the works before commencing them (sec. 38), and sued for the penalty under sec. 41. He proved the above facts, and referred to sec. 3, "external wall," sec. 12, and first schedule, preliminary rules, 1, 2, &c. as requiring the vertical inclosure to be built under the rules of the Act, and to H. 3, "public building," secs. 22 and 30, as requiring the galleries, stairs, and passages to be subject to the rules of the Act, and erected with the approval of the district surveyor as to their safety. The works being subject to the Act, are, by sec. 31, placed under the district-surveyor's supervision, and notice is required to be given by the builder to him, under the 38th section; and Middleton had, by neglect, incurred the penalty under sec. 41.

The magistrate, Mr. A'Beckett, convicted him; but as the district surveyor did not press for a heavy penalty, on account of its being under a new Act, he was fined 1*s.* with costs, the magistrate saying that he would not be so leniently dealt with on any future occasion. The building will have to be altered.

WATERWORKS FOR HEANOR.

WATERWORKS are about being established at this place under the auspices of the Local Board of Health. Owing to the great scarcity of water in the neighbourhood—arising, partly from the town being situated on the summit of a hill, which rises more than 200 feet above the adjacent valley of the River Erewash, and partly from the constant and increasing abstraction of the water underneath by mining operations—the Local Board last year called to their assistance Mr. Norris, engineer, of Nottingham, who devised a scheme of "constant" water supply, which met with their approbation, and being submitted to the General Board of Health for their sanction, previously to a proposed mortgage of the rates of the district, also received the approval of that body, after an inquiry on the spot by one of their engineering inspectors. Mr. Norris's project in its main features, consists of a shaft to be sunk a sufficient depth (about 90 yards) to reach the water-bearing strata, at a point near the south-western extremity of the district; at the mouth of which will be fixed a 15-horse high-pressure steam engine, to raise the water by means of a lift and plunger pump, and force it into a covered service reservoir (capable of holding three days' consumption), situated on the highest point of Tag-hill. From this reservoir the water will be distributed through a 6-inch cast iron leading main, through the whole of the built portion of the district. The engineer's estimate for the construction of the works is 3,500*l.* nearly the whole of the contracts for which have recently been let; that for the main pipes (about 4½ miles), to Mr. Geo. Staley, of the Butterley Iron Works, and the others to Messrs. C. C. and A. Dennett, contractors and builders, of Nottingham. The works will be immediately commenced, and the invaluable boon of pure and potable water, to which the inhabitants have been so long strangers, will be dispensed throughout the district, it may be hoped, during the ensuing summer.

HANGING BELLS TO TURN IN THE STOCK.

WITH reference to Mr. Denison's plan illustrated in our last number, Mr. W. L. Baker, whose plan has been described in our pages, has sent us a communication urging that it was he who called attention to the destructive effect of the constant action of the clapper upon a single portion of the sound-bow, and first suggested that a bell should be cast in a way that would enable it to be turned round so as to present a new point of contact to the clapper without refitting or reconstructing any portion of the gear. Further, that his specification, after describing two ways in which his idea may be put into execution, points out that the object may also be attained "by casting an axis on the top of the crown." He says that "a bell hung upon one central bolt or axis, is capable of being moved round upon that axis with great ease, so as to present at intervals the whole of the internal surface of the sound-bow to the action of the clapper, and in a clock-tower bell the whole of the external surface of the sound-bow to the action of the hammer."

We avoided printing the comparison which Mr. Denison drew between Mr. Baker's plan and that which he thought his own, being anxious not to damage Mr. Baker's just claims.

GAS.

A LECTURE to working gasfitters and others, on science as connected with gasfitting, was delivered at the St. Martin's school-room, St. Martin's-lane, London, by Mr. Alexander Wright, on Thursday evening in last week. The lecture was well attended by the working classes of the Gasfitters' Institution, and by many gentlemen connected with gas-engineering.——At the opening of the West Ham Gas Works there were only 8 retorts: there are now 64 required to supply the increased demand for gas in that neighbourhood.——The inhabitants of Huntingdon have resolved not only to purchase the local gasworks for 4,250*l.* but also to raise 2,250*l.* to put the concern into an efficient state. Capital is to be raised in 650 shares of 10*l.* each.——The Chester Town-Council have under consideration a proposal for the amalgamation of the two gas companies, under an Act securing to the corporation power at a future period to purchase the plant and works; but in the meantime raising the maximum price from 4*s.* 6*d.* to 5*s.* and providing for subsequent reductions from surplus profits beyond 10 per cent. and a contingent-fund of 10 per cent. on the capital. The projected arrangement seems to resemble that at Liverpool, where the anticipated reductions year after year have been found to be downright humbug, 10 per cent. profits and reserve-funds notwithstanding.——The Birkenhead Commissioners have had a report from their committee on the complaints as to gas and water supply, in which they are recommended seriously to consider the propriety of taking both supplies into their own hands, negotiating, if possible, with the Gas and Water Company for the purchase of their works, or applying to Parliament for power to construct new works. The report has been adopted by the Commissioners.——A strike of the workmen at the Halifax Gas Company's works took place on Saturday before last. The cause was a threatened reduction of wages from 24*s.* 6*d.* to 23*s.* The men quitted without giving notice, and the manager had fifteen of them lodged in custody. He gives no previous notice himself, it appears, when dismissing his workmen.

TIME AND MATERIALS *versus* MEASUREMENT AND VALUE.

LAMPRELL *v.* COLLIER.—In this case the plaintiff is a builder, carrying on business in Long-lane, West Smithfield: the defendant is an auctioneer, carrying on business in Moorgate-street. In the year 1854, plaintiff executed general repairs to a dilapidated house belonging to the defendant, the nature of which was such, that no specification or contract could be made for them; and during their progress, Mr. Wright, a surveyor, was frequently on the premises, inspecting the works; and at the completion of the works, plaintiff handed his account of time and materials to the surveyor to peruse on behalf of defendant: this account amounted to £1,054 5*s.* Upon seeing this, the surveyor said he should measure the works, and make out a measurement account, which he did, making the amount 583*l.* 4*s.* 6*d.* and the defendant, upon being appealed to by plaintiff, refused to pay anything beyond the last-mentioned sum. Plaintiff then offered to refer the question to independent surveyors, but defendant refusing to do so, an action was brought in the Court of Queen's Bench for the amount of plaintiff's time and material bill, which, at the last summer assizes held at Croydon, was referred to Mr. Charnock, barrister.

At the reference before the arbitrator, the plaintiff proved, by his books and invoices, that he had paid out of pocket between 900*l.* and 1,000*l.* for the works, and that his charges to defendant were fair and reasonable. For the defence it was contended that, at the commencement of the works, a conversation took place between plaintiff, defendant, and Mr. Wright, at which plaintiff agreed to execute the works under the direction of the latter, and that, at their completion, he should certify the amount defendant should pay for them,—that the prices were fair, and if ever so unfair, plaintiff must be content with them. In reply, plaintiff denied the alleged conversation, and stated there had been no agreement that the works should be measured,—that during their progress no measurements were made,— that the surveyor did not attempt to measure them until after plaintiff delivered his time and material account,—and that when the surveyor did measure, most of the works were covered, and the house occupied: it was therefore impossible to measure them properly. Plaintiff also called the tradesmen who executed different branches of the works, and proved that their cost price was much more than the surveyor had allowed for them, including builder's profit.

After an inquiry, extending over twenty-one meetings, the arbitrator has published his decision, awarding to plaintiff the full amount of his claim, the costs of the trial at Croydon, and the costs of the reference.

KENDALL *v.* KING.*

IN the report on the above-named case, in your publication of the 16th inst. what I (in common with Mr. Bellamy and Mr. Shaw), said before the arbitrator, illuminated as it is with three notes of admiration, is made to take a colour which does not belong to it. Whether Messrs. Kendall and Co. by entering into the competition on the terms proposed, committed themselves to the acceptance of 157*l.* 10*s.* as a full remuneration for "all services short of the actual erection of the buildings," is wholly extraneous to the real question, upon which my opinion was asked, and which is passed without notice in the report. That was, whether for the work and labour actually performed by Messrs. Kendall and Co. their charge of 1,048*l.* 15*s.* was or was not excessive. I thought it was. I beg leave to add, that I fully concur with the principle laid down by Mr. Tite—when it applies.

AMBROSE POYNTER.

BALL OF THE BUILDERS' BENEVOLENT INSTITUTION.

THE pleasant assemblage of the friends of this institution, at Willis's rooms, on the 14th February, has added about 120*l.* to the funds, and will serve to give comfort to those who need it.

Surely this is dancing to a good purpose. There were about 500 persons present, including Messrs. Charles Lucas, president, William Lee, M.P. John Lee, Charles Mayhew, Frederick Ashton, Barry, John Jay, J. Hunt, James Wagstaff, Dunnage, Sewell, Christopher Eales, Henry Dodd, Thomas Cozens (the founder of the institution), Joseph Bird, Soward, Collins, Stanbury (Birmingham), James Newson, jun. W. Norris, W. Hutchons, W. Ellis, Joseph Lambert, D. Nicholson, jun. Charles Formby, John Chapman, Stirling, William Todd, jun. &c. &c.

The whole affair was managed very well, and did credit to the committee.

Miscellanea.

ELECTRO-TELEGRAPHIC PROGRESS.—A telegraph to Australia is projected by the Mediterranean Electric Telegraph Company, who are at present engaged in uniting the European lines with Africa through Sardinia. The Australian project is an extension of the East Indian, already noted. The East Indian will comprise two great branches, the northern branching towards Cabul and Cashmere, while proceeding to Calcutta, and the southern passing along the Bengal coast, and by the Sunda islands to the north of Australia, whence it will coast southwards along the eastern side of the Australian continent to Port Adelaide. The entire length of the line is estimated by the Genoa *Corriere Mercantile* at 20,000 kilometres.

* The title of the firm should have stood in our report Kendall Pope (not Cope), and Edin.

Great Fire at Clerkenwell.—On the 14th inst. a fire, originating in a large factory belonging to an ivory, brass, and wood turner, in Yardly-street, Exmouth-street, destroyed not only the factory itself, but also fourteen houses, extending right and left in the same and adjoining streets. This and some other recent fires, in which adjoining premises have suffered severely, should call attention to the dangerous and censurable mode pursued of stocking back-yards of houses with timber. Wooden buildings are prohibited by the Building Act, but our legislators have failed to discover any danger in permitting timber to be stacked, without let or hinderance, in any quantity. Some remedy should be devised.

Fire at Leeds Industrial School.—The south wing of this modern building was burnt on Saturday before last, by a fire originating between the joists and the flooring, both of the school-room and of the dormitory of the boys' department, and believed to have been caused by the overheating of a hot-air flue, with which the establishment is warmed.

Fire at a new Workhouse in Caithness.—At Halkirk, Caithness, a large workhouse is in course of erection, and was pretty far advanced towards completion, when a fire, it is believed, wilfully raised, completely gutted the walls of all woodwork on Friday before last. The supposed incendiary is an Irishman who had been employed as a labourer on the works, but was dismissed, and was known to have threatened to "make a poor-house of it before he was done with it." The scoundrel has been laid hold of, and, according to the *John O'Groat's Journal*, the case is likely to be proved against him. The joiners' tools were all burnt, and many of the poor fellows will be heavy losers in consequence. The contractor for the building is Mr. Robert Johnson, of Edinburgh, builder, and the amount of the contract is 3,547*l*. The damage is variously estimated, but 1,800*l*. is said to be about the mark. It is feared that no insurance had been effected by the contractor.

The Iron Trade.—This trade has of late been very dull, and the demand for sheet and plate-iron in particular has much fallen off. Some large works are on short time, and prices have still a downward tendency, "underselling" being much complained of by those who regard it as their interest to raise prices rather than to lower them. The price of hot-blast pigs is reported to have fallen in the Yorkshire and Derbyshire districts from 7*s*. to 10*s*. a ton.—— It appears from a paper on "The Mining Resources of France from 1841 to 1851," prepared by Mr. H. Reader Lack, of the Statistical Department of the Board of Trade, that Great Britain raises four times as much iron, and sixteen times as much coal, as France. The mineral productions of that country are, however, rapidly increasing. The production of coal, lignite, and anthracite, was, in 1841, of the value of 33,159,044 frs.; in 1852, 46,751,806 frs.;—iron and steel, in 1841, 141,789,500 frs.; and in 1852 it had increased to 297,330,748 frs.

Memoirs of Libraries.—The prospectus of a new and elaborate work on the history and economy of libraries, by Mr. Edward Edwards, of Manchester, has been issued. The work itself will be in two volumes, at a price not exceeding 24*s*. and will be published by Messrs. Black, of Edinburgh, probably in the course of the present year. The table of contents, and the researches of the author, in this particular department, afford assurance that this will be a work *per se*, and exhaustive of the subject.

The Meeting of the British Association.—The annual meeting of the British Association for the Advancement of Science has been fixed to be held at Cheltenham for this year, in the week commencing August 6th, and active preparations are being made in the county of Gloucester, in order to give a fitting reception to the members. Lord John Russell, who has lately taken up his residence in this county, aids the committee, and a subscription has been entered into to defray the necessary expenses.

New Health Act.—The Registrar-General having been applied to by several of the newly-appointed officers of health, for liberty to obtain information from the registrars essentially necessary for the due performance of their duties, has, in answer to their letters and those of registrars on the same subject, permitted the registrars to supply copies of their usual weekly returns to these gentlemen, but "does not wish the registrars to be subjected to the trouble of so doing without being properly remunerated."

Modern Lamps.—Very lately two huge gas-lamps have been attached on either side of the middle door of St. Philip's Church, Regent-street: surely some Irish hod-man must have suggested the design, as I cannot think that any architect or builder would place such outrageous specimens on any classic building. Perhaps the "parochial authorities" have bought them second-hand at the smash of some gin-palace in the New Cut or Wapping. Pray do your best to have proper ecclesiastical gaseliers substituted.

Gas.

The "Amateur Musical Society."—This amateur *Musical* Society being now considered by the world of London as one of the established musical societies of the metropolis, it will only remain for themselves to follow that course which will best carry out the objects for which it was originally founded, and at the same time insure a lasting duration. The addition of madrigals and part-songs by Mr. Leslie's choir may be made a feature and an advantage, if not overdone; but if the orchestral members—in number about eighty—have not more work assigned them than has lately been the case, the main object of their meeting—the practice of instrumental music—may be ultimately lost sight of. The fact is, the performance once a fortnight of a short and easy symphony and two light overtures and a march will hardly be an inducement to so many gentlemen to forego other engagements and assemble with their various instruments, some from considerable distances, at the Hanover-square Rooms. We observe that the best works please the audience the most, and the performance of the great symphonies of Beethoven, Mozart, Spohr, Mendelssohn, with the *best* overtures of Weber, Mozart, Cherubini, Rossini, and Auber, elicit far greater applause than the inferior compositions of the same or other masters;—not that we would advocate the performance of *great works* only;—variety is charming, and *toujours perdrix* not desirable; but let great works be the rule, and lighter ones the exception. *Au reste*, the *stuff* of which this orchestra of amateurs is composed may be fairly judged of by the number of capital solo-players that constantly emerge from its ranks, and the excellent precision and skill with which the music generally is performed. We wish the Society every success. Music and architecture are cognate.

Building-trade Strike at Paisley.—On Monday last, the slaters and bricklayers of Paisley turned out on strike for rise of wages. The bricklayers' demand is 3*l*. a-week—a rise of 1*l*. 10*s*., and the slaters are asking 1*l*. 13*s*.—a rise of 11*s*. Most of the masters have submitted to these terms. It is little to the credit of the workmen to take advantage of the present emergency, when they knew that owners of property, damaged by the late storm, must have it repaired at whatever cost; and it is nothing short of extortion for the bricklayers to be demanding 10*s*. per day.—*Glasgow Gazette*.

Strike of Masons at Witley Court.—The extensive improvements and alterations at Witley Court, which were proceeding rapidly and satisfactorily, have been interrupted by the strike of the stonemasons, some sixty in number, engaged thereon. They insist on working only nine instead of ten hours a day. The wages they receive are said to be very good, and Mr. Wood, the contractor, it is said, will not comply with their demand. It is thought not unlikely that the rest of the men, 250 in number, will also turn out.

Harmony of Theory and Practice in Mechanics.—Mr. Macquorn Rankine, C.E., on his appointment to the Chair of Civil Engineering in the University of Glasgow, delivered an introductory lecture on the above subject. The lecturer commenced by showing that in geometry, in poetry, in rhetoric, and in the fine arts, the Greeks are our masters, but that in physics and mechanics their notions were pervaded by a great fallacy—a double system of natural laws; and that this fallacy of a supposed discordance between rational and practical, celestial and terrestial machines, continued in force, and appears to have gathered strength and to have attained its full vigour during the middle ages. In the 15th, 16th, and 17th centuries, the system falsely termed Aristotelian was overthrown, and the truth began to be duly appreciated, that sound theory in physical science consists simply of facts, and the deduction of common sense from them reduced to a systematic form. The lecturer proceeded to show many evils which arise from ingenious and practical men not being acquainted with scientific principles, and how often time and money are expended in visionary inventions, particularly perpetual motion, of which, two appeared in the last year's patent list.

Embank the Thames.—Upon the carrying out in a comprehensive form of this great national work depends the effectual cleansing and purity of the Thames. By embanking it, the mud banks will be got rid of, and the scour of the river increased, and so most effectually cleansed. Intercepting sewers will be but a very imperfect alleviation, as, when other sources of impurity are considered, and the great mass of human beings living on the river are also taken into account, it must ever be a means of carrying off sewage. If the intercepting scheme is to be carried out at such fearful cost to the ratepayers, and such a very problematical result, by all means preserve the sewage for the Thames marshes, and not keep it in a state of oscillation and suspension between Gravesend and Woolwich, by its being poured into the river at the latter point.

A Heavily Taxed Ratepayer.

Neglect of Work by Engineers.—At Bilston Petty Sessions, on Friday before last, Joseph Evans, an engineer employed at Messrs. Baldwin's works, was charged with having absented himself from his work on the preceding night. He was committed to prison for one month. Isaac Stokes, an engineer employed at the works of Mr. B. Gibbons, was charged with a similar offence. He was sent to gaol for fourteen days.

Statue of the late Mr. Baines.—The committee for erecting a statue of the late Mr. Edward Baines at Leeds, decided last week upon the statuettes sent in by Mr. Behnes and Mr. Noble. The former gentleman sent in one, an improvement upon that previously forwarded. The latter sent two—one an improvement on the original, the other new. The committee unanimously decided upon giving the commission to Mr. Behnes. The second prize of 30*l*. will, consequently, be paid to Mr. Noble. The statue is to be eight feet high, and to stand upon a pedestal of Sicilian marble. The committee, according to the *Leeds Intelligencer*, have now selected a site, at the east side of the vestibule of the Town Hall, to cost 700 guineas.

Bath Graphic Society.—This successful society gave the second of their *conversazioni* on Tuesday evening before last. In the octagon room, the centre of which was occupied by lounges, were arranged portfolios of sketches. The long room, furnished with chairs and couches, was lined with paintings and drawings two or three deep. The third large room was devoted to refreshments.

The Excavations at Fountains Abbey.—Lord De Grey has recently recommenced his winter's excavations at Fountains Abbey. The excavators commenced operations in the base story of the Fraterhouse. Part of the floor yet remains; and amongst the rubbish some early English capitals, of the finest Nidderdale marble yet discovered, have just turned up. The great kitchen, refectory, buttery, and cloister-court will next be exposed.

Fall of a Bridge and Loss of Life.—On Wednesday last, two arches of a railway bridge in course of construction over the river Doon, in Ayrshire, suddenly fell to the ground, burying two men in the ruins. They were got out as quickly as possible, but died in a very short time. The catastrophe is attributed to the heavy rains following the severe frosts, and softening the lime.

Marsden's "Patent Artery and Vein System" of Ventilation.—Mr. Marsden's mode of ventilating sewers, public or other buildings, mines, tunnels, &c. consists of the action of a series of small "vein" pipes, as he calls them, concentrating from various parts of the cavity, chamber, or locality to be ventilated, into one air-tight and trapped receiver, communicating with what he calls an "artery;" but which, by parity of similitude, he ought, in fact, to call a great vein, the whole system being venous or concentrating and withdrawing, and not arterial or radiating and distributive, so far at least as regards the withdrawal of foul air through his ventilating pipes. These "arteries," or larger vein pipes, in turn convey the noxious gases collected by the smaller vein pipes onwards, either to a trunk vein or directly to a main-receiver, trapped, and leading them into an extracting shaft with fan, which, in the ventilation of sewers or mines, not only generates the suction power (worked by steam-engine or water power), whereby the gases are withdrawn, but also hands them up to furnaces prepared in a main shaft for their combustion. What Mr. Marsden appears more especially to claim, is the idea of ventilation from various points by a concentration of "vein" pipes, at once separating and enclosing the gases while conveying them away to trapped receivers and main-pipe conductors, to be expelled and consumed by modes already suggested and indeed already realized. The reverse process or distribution of pure air to mines, &c.—a true *arterial* system,—may be carried out through the same system of pipes and fans, &c.

Construction of Flues.—As things of utility, as well as of taste, are noticed in the *Builder*, I need not apologize for calling your attention to the flues laid in Messrs. Berens, Blumberg, and Co.'s buildings, Cannon-street, under my superintendence as clerk of the works, by direction of Mr. Husking. The horizontal flues, 220 feet in length (from Hayden's warming apparatus), are all 9-inch patent drain-pipes, laid in brick chambers, with concrete bottoms and slate tops. The saddle-pieces in connection with these pipes, at convenient distances, are only loosely bedded, and afford every facility for sweeping at stated periods. These pipes have been in use fifteen months, and are so satisfactory that I have instructions to carry out the same plan in the next buildings. It has occurred to me, that for church flues running underground, or for flues round hot-houses, these pipes would be most economical, and the saddle-pieces would afford every facility for sweeping.—W. L.

THE HARDWARE AND METAL TRADES' PENSION SOCIETY.—On Tuesday last, a concert, headed instrumentally by Fraülein Gräves and Sainton, and by Miss Dolby and Mr. Wilbye Cooper, vocally, was given at the Hanover-square Rooms, in aid of the funds of the Iron, Hardware, and Metal Trades' Pension Society, and was exceedingly well attended. We were to this time somewhat in ignorance of the progress of this association; but under the management of the committee who so well organized Tuesday night's concert, it ought to be prosperous.

ARCHITECTS' "CLERKS."—A gentleman who has a somewhat exalted idea of his distinguished position as "*only* managing assistant to an architect and engineer of high standing," is extremely indignant that he should be termed a "clerk." It is, he says, highly aggravating to him to be so designated. He has looked out the term—at least he says so—in Johnson's Dictionary, and finds it to mean a bookkeeper or accountant. I am afraid your correspondent has not referred to a good edition of Johnson. If he will do so, he will find among others, the following meanings of the word "clerk:"—1. A clergyman. 2. A man of learning and letters. 3. A person who is employed in writing for another. 4. An officer of various boards; but not a bookkeeper or accountant. If he had been aware that the original meaning of clerk was a man of learning; that it is the proper designation of a clergyman; that the principal law officer of a city or borough is termed the city or town clerk; that the principal officer of many corporations is termed the clerk; and that the clerks in the Courts of Chancery and Houses of Parliament—not to mention hundreds of other clerks—are gentlemen who would scarcely consider the position of an architect's "assistant" equal to their own, he would, perhaps, feel less aggravated by the designation. Your correspondent states his desire that we should "call a spoon a spoon," and almost tempts one to be guilty of the rudeness by manifesting so much anxiety to enhance the dignity of his position by borrowing from the linen-draper's "assistant" his usual denomination.—AN ACCOUNTANT.

DWELLINGS OF THE POOR NEAR SWINDON.—A correspondent, who takes an active and official interest in the sanitary welfare of Swindon, sends us a painful account of a visit paid to some agricultural cottages in that neighbourhood,—"dens," he remarks, "equal to the vile ones so ably set forth in your excellent book of 'London Shadows.'" And that such dens do exist, alas! in but too many localities besides London, it required no special detail to assure us. "Inquiring for the house," continues our correspondent, in reference to one of the dwellings referred to, "an inhabitant of the swampy lane told us, '*You must go on till you come to a gurt and nasty pond, and the house is close to't.*' It was close—four feet only from the '*nasty pond*,' which afforded the only water they had to use, and was further the receptacle for all the privy soil and sewage of the lane when rain came to flush the ditches." In this hopeless abode, as might well be anticipated, there lay the head of a family of ten children, in the "prime of life," but on the brink of the grave. Neither he, nor his wife, nor his little ones, had tasted food for four and twenty hours. It is probable that, ere long, the parish will have what is left of his family to provide for. Would it not have been a decided saving had they provided for the removal of the "gurt and nasty pond," and thus have conferred the boon of health and life upon the miserable head of such a family, and so have enabled him to provide for them himself?

HILLOTYPE.—The *Rondout* (U.S.) *Courier* says,—after years of untiring application and almost unexampled perseverance, the hopes of our townsman, the Rev. L. L. Hill, are crowned with success, and he is about to realise a reward for his toil. He has already received an offer of 30,000 dollars for the Hillotype. A great addition recently made to the invention consists in reproducing the colours of nature on collodionised glass. This revolution will extend to portrait and landscape painting, as Mr. Hill is able to copy pictures of any size, and to produce any number of copies from one original. The Hillotype consists in taking all the natural colours by a single process—every tint of countenance, and every shade of dress, and even the precise colour of the eye, being transformed to the picture.

THE BIRMINGHAM GLASS CUTTERS' SOCIETY.—The assistance afforded by the "United Flint Glass Cutters' Society" of Birmingham to its needy members is worthy of imitation by similar societies. The last yearly balance sheet of the society states that about 150 men received weekly assistance from the society's funds for a considerable period in course of the year, and that the amount distributed was nearly 2,000*l.*, while 1,600*l.* remained in hand. It is to the working of such societies as this that Birmingham, according to the local *Journal*, in some measure owes its immunity from strikes.

TENDERS

For the Royal Surrey Gardens Music Hall. Mr. Horace Jones, architect. Quantities taken out by Mr. Reddall:—

Jay	£19,700	0	0
Gammon	18,900	0	0
Ashby and Sons	18,889	0	0
Ashby and Horner	18,846	0	0

TO CORRESPONDENTS.

"*The Smokeless Fire.*"—We have received at least two dozen letters on this subject, to which we may look again presently.

"Croydon."—"Inquirer."—"T. T."—"M. J." Accrington (properly managed, it would).—"W. F. H."—"W. H."—"J. C."—"J. N."—"A. P."—"C. B."—"B. F."—"Mr. H."—"J. S. N."—"E. A."—"T. A."—"A Manufacturer's Clerk."—"Another Clerk."—"E. R."—"B. H." and "J. W. O."—"W. L. S."—"A Twelve Years' Subscriber" (has not hit on the right method).—"A Lover of Truth."—"Mr. A."—"E. A. H." (thanks).—"H. H."—"Yerax."—"W. B." (we cannot question a solemn award on simple assertion).—"T. S." Colchester.—"A. T. S. P. R." (the approval of drawings for a Public building rests with the District Surveyor, unless difference arise, in which case appeal may be made to Board of Works).—"E. L. T."—"R. and R."—"J. O."—"G. M."—"J. J."—"F. G. S."—"F. and C."—"H. E. K."—"P. L. D."—"F. G. S."—"E. R."—"A. G. H."—"J. B." Bells (too late for this week).—"J. E."—"W. R."—"M. H."—"J. M."—"A Lover of Gothic."

Mr. Petit's rejoinder to Mr. Scott reached us too late for the present number.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

NOTICE.

FROM and after the 1st January, 1856, the *entire postage* upon all newspapers sent to France, and Foreign countries *viâ* France, must be prepaid: the stamped copy of the paper is of no avail.

ADVERTISEMENTS.

METROPOLITAN LOAN COMPANY,
Established 1839.
1, CRAVEN STREET, STRAND, LONDON.

Loans are advanced in amounts varying from 5*l.* 10*s.* to 100*l.* repayable weekly or otherwise, as may be agreed upon, at a discount of 2½ per cent. for twenty-five weeks, and for 50 weeks at 5 per cent. Forms may be had, price 2*d.*; if by post, three postage stamps to be enclosed.
ROBERT NORTON, Secretary.

MONEY on LOAN, at 3*l.* per Cent. per Annum.—ARNEWAY'S CHARITY.—NOTICE IS HEREBY GIVEN, that the Trustees of this Charity are enabled to lend out the Trust Moneys to poor occupiers or traders resident within the City and Liberty of Westminster, that is to say, within the parishes of St. Margaret and St. John the Evangelist, St. Anne, Soho, St. Clement Danes, St. George, Hanover-square, St. James, St. Martin-in-the-Fields, St. Mary-le-Strand, and St. Paul, Covent-garden. The amount of each loan is not to exceed 100*l.* is to clear interest after the rate of 3*l.* per cent. per annum, and is to be secured by the bond of the borrower, with two sureties. Printed Forms of Application, and all necessary information, may be obtained by applying personally, between the hours of Ten and Three o'clock in the day, at the office of the Clerk and Solicitor to the Trustees, No. 14, Great Queen-street, St. James's Park.
By order, EDWARD S. STEPHENSON,
Clerk and Solicitor to the Trustees.

NOTE.—The Trustees meet on the second Wednesday in every month, to consider such applications for loans as have been sent in one clear week at the least before the first day of the month.—The sureties must be unexceptionable.

LOANS from 25*l.* to 1,000*l.* upon approved personal or other security, repayable by easy instalments, extending over any period not exceeding fifty months, are readily OBTAINABLE from the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Late Office, 17, New Bridge-street, Blackfriars. Rules 6*d.* each copy. 1*s.* per post.
CHARLES JAMES THICKE, Resident Secretary.

LIST OF NEW BOOKS.

1.

The FOOD of LONDON; A Sketch of its chief Varieties, Sources of Supply, Suspected Adulteration, Machinery of Distribution, &c. By GEORGE DODD. Post 8vo. 10*s.* 6*d.*

2.

LETTERS on ENGLISH AGRICULTURE. By JAMES CAIRD, Esq. the *Times* Commissioner. Reprinted by permission. Second Edition. 8vo 14*s.*

3.

The INVALID'S OWN BOOK: A Collection of Recipes from various Books and various Countries. By the Hon. Lady CUST. Second Edition, revised. Fcp. 8vo. 2*s.* 6*d.*

4.

HOW to NURSE SICK CHILDREN: Containing Directions which may be found of service to all who have the Charge of the Young. Fcp. 8vo. 1*s.* 6*d.*

5.

The MATERNAL MANAGEMENT of CHILDREN in HEALTH and DISEASE. By THOMAS BULL, M.D. Fifth Edition, revised and enlarged. Fcap. 8vo. 5*s.*

6.

A MANUAL of the DOMESTIC PRACTICE of MEDICINE. By W. B. KESTEVEN, Fellow of the Royal College of Surgeons of England, &c. Square post 8vo. 7*s.* 6*d.*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

LIST OF NEW WORKS.

1.

Prof. OWEN'S LECTURES on the COMPARATIVE ANATOMY and PHYSIOLOGY of the INVERTEBRATE ANIMALS. Second Edition; Woodcuts. 8vo. 21*s.*

2.

Mr. PAGET'S LECTURES on SURGICAL PATHOLOGY, delivered at the Royal College of Surgeons of England. 2 vols. 8vo. Woodcuts, 32*s.*

3.

Sir BENJ. BRODIE'S PSYCHOLOGICAL INQUIRIES. Third Edition, revised; with some Additions. Fcp. 8vo. 5*s.*

4.

Sir HENRY HOLLAND'S MEDICAL NOTES and REFLECTIONS. Third Edition, with Alterations and Additions. 8vo. 18*s.*

5.

Dr. W. MACKENZIE'S PRACTICAL TREATISE on the DISEASES of the EYE. Fourth Edition, enlarged. 8vo. Woodcuts, 30*s.*

6.

Dr. PEREIRA'S ELEMENTS of MATERIA MEDICA and THERAPEUTICS. New Edition, revised by Dr. A. S. TAYLOR and Dr. G. OWEN REES. 2 vols. 8vo. Woodcuts. 3*l.* 13*s.*

7.

Dr. CHARLES WEST'S LECTURES on the DISEASES of INFANCY and CHILDHOOD. Third Edition, revised and enlarged. 8vo. 14*s.*

8.

Dr. THOMPSON'S CONSPECTUS of the PHARMACOPŒIAS. 16th Edition, revised by Dr. E. L. BIRKETT. 18mo. 5*s.* 6*d.*; or roan tuck, 6*s.* 6*d.*

9.

Dr. THOMPSON'S LONDON DISPENSATORY. Eleventh Edition, revised by Dr. A. B. GARROD. 8vo, Woodcuts, 21*s.*

10.

ERASMUS WILSON'S DISSECTOR'S MANUAL of PRACTICAL and SURGICAL ANATOMY. Second Edition: Woodcuts. 12mo. 12*s.* 6*d.*

11.

Prof. BRANDE'S LECTURES on the ARTS connected with ORGANIC CHEMISTRY applied to MANUFACTURES. Arranged by permission, by J. SCOFFERN, M.B. Fcp 8vo. Woodcuts. 7*s.* 6*d.*

12.

Dr. PEREIRA'S LECTURES on POLARISED LIGHT, &c. Second Edition, revised and enlarged from the Author's materials by the Rev. B. POWELL, M.A. Fcp. 8vo. Woodcuts. 7*s.*

13.

ROBERT HUNT'S RESEARCHES on LIGHT, in its Chemical Relations. Second Edition, revised, with Additions. 8vo Woodcuts. 10*s.* 6*d.*

14.

DE LA RIVE'S TREATISE on ELECTRICITY. Translated for the Author by C. V. WALKER, F.R.S. With Woodcuts. Vol. I. 8vo. 18*s.*; Vol. II. price 28*s.*

15.

MAUNDER'S TREASURY of NATURAL HISTORY; or, Popular Dictionary of Animated Nature. New Edition; 900 Woodcuts. Fcap. 8vo. 10*s.*

16.

The ARTISAN CLUB'S TREATISE on the STEAM-ENGINE. Edited by JOHN BOURNE, C.E. New Edition; Plates and Woodcuts. 45*s.* 27*s.*

17.

The Rev. Canon MOSELEY'S MECHANICAL PRINCIPLES of ENGINEERING and ARCHITECTURE. Second Edition, enlarged; Woodcuts. 8vo. 24*s.*

18.

NESBITT'S PRACTICAL LAND-SURVEYING. Tenth Edition, revised and enlarged by T. BAKER, Civil Engineer. 8vo Woodcuts, Plates, &c. 12*s.*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW WORK BY THE AUTHOR OF THE "CURIOSITIES OF LONDON."
Now ready, with Frontispiece and Vignette 3s 6d cloth,
THINGS NOT GENERALLY KNOWN,
Familiarly Explained. A Book for Old and Young.
By JOHN TIMBS, F.S.A.
By the same Author, Third Thousand.
CURIOSITIES of LONDON; with nearly Fifty Years' Personal Recollections. With a Portrait. 800 closely-printed pages, 14s.
DAVID BOGUE, Fleet-street.

Forwarded free for value in postage stamps.
ANCIENT GOTHIC CHURCHES.
Part I. 7s. 6d. contains the Geometrical Secrets of the true Freemasons in constructing the Round Churches of Ludgate; Malmesbury Abbey; King's College, Cambridge; Henry VII.'s Chapel; St. Mary's Church, Oxford, &c. Part II. 8s. demonstrates Preston Church, Kent; Tong Church, Salop; Cradley Church, Surrey; Salisbury, Lincoln, Litchfield, Worcester, Wells, Hereford, and Norwich Cathedrals, &c. Part III. 8s. sets forth Sefton Church, Liverpool; St. Alban's Abbey; Westminster Abbey; Peterborough, Exeter, and Bristol Cathedrals. BATH, PORTLAND, and ROMAN CEMENTS GROUND and LUMP HYDRAULIC BLUE LIAS LIME

The LONDON and WEST of ENGLAND CEMENT COMPANY can offer to the trade the best Hydraulic Cements, at reduced prices, the material being excavated in its pure and unadulterated state, from quarries on their own property. The Company particularly recommend a trial of their XXXX Bath Cement, as far superior to any article now in the market. These cements can be sent by rail or shipped from their wharf, direct to all parts.—Agents required, and a liberal discount allowed. Orders received by Mr. KIALLMARK, 20, Old Broad-street, City, or by RICHARD WINTER, Cement Works, Dunball, Bridgewater.

BATH CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

PORTLAND CEMENT.

CHARLES RICHARDSON,
6, SOUTH WHARF, PADDINGTON.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable. —Orders received at Great Scotland-yard, and at the Works.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 8, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Ch mney-pots, ditto Vases, Edging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Porzolano.

NOTICE.—M. H. BLANCHARD, 74, Blackfriars-road, London, Manufacturer of PLASTER of PARIS of a superior quality, suitable for Sculpture, Architectural Embellishments, &c.—will not twist, warp, or give after set, but will retain its hardness and strength.

Superfine, per ton	£7 0 0
Fine	3 0 0
Coarse	2 10 0

Delivered for Cash to any of the Metropolitan Railway Stations, or within the Metropolis.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster.

TATHAM & CO.—No. 14, SOUTH WHARF, PADDINGTON,
BRICK, LIME, and CEMENT MERCHANTS,
SOUTHAM BLUE LIAS LIME DEPOT.

Bath, Portland, Lias, and Roman Cements; Parian and Keene's Cements, Plaster of Paris, Glazed Stoneware Sewage Pipes, Fire Goods, Pitched Blue Bricks, White Building Bricks, White Enamelled Pans and Traps, and every description of Building Material.

N.B. Lump and Ground BLUE LIAS LIME delivered in boat-loads direct from the Works in Warwickshire, to any part of the river or canal.

SOUTHAM BLUE LIAS LIME DEPOT,
No. 14, SOUTH WHARF, PADDINGTON.

TATHAM & CO. have arranged for a constant supply of the above very superior BLUE LIAS LIME, which for the last two years has been extensively used at most of the large works constructed during that period or now in hand, and any orders they are favoured with will command their best attention.

Boat-loads of either Lump or Ground Lime can be delivered direct from the Works in WARWICKSHIRE to any part of the Rivers Thames or Lee, alongside any wharf on canal, or by boat or rail to any part of the kingdom.

PORTLAND CEMENT.—TATHAM & CO. are enabled to offer a very superior quality of this valuable Cement at a moderate price, and all orders addressed to
No. 14, SOUTH WHARF, PADDINGTON,
will receive the best and most prompt attention.

11, George-yard, Lombard-street, City

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOUTH, Agent, as above.

PARIAN CEMENT is reduced in price, by the Patentees and Manufacturers, FRANCIS, BROTHERS, Nine Elms, London. This internal stucco may be painted or papered within a few hours of its application, and rooms be thus made dry and habitable immediately.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwater, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank street, Westminster, who prepare one quality only of Portland Cement.

HUBBUCK'S PATENT WHITE ZINC PAINT,

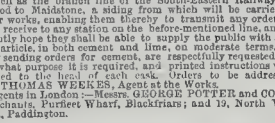
The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be altogether avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK—LONDON—PATENT. And when so marked, the quality is guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

MEDWAY LIME and CEMENT WORKS, LOWER HALLING, near Rochester.—T. H. BOORMAN, WILD and CO. beg to inform the public and trade generally, that they have completed their works for the manufacture of PORTLAND CEMENT, and from their contiguity to the river Medway, as well as the branch line of the South-Eastern Railway from Strood to Maidstone, a siding from which will be carried into their works, enabling them thereby to transmit any orders they may receive to any station on the before-mentioned line, and confidently hope they shall be able to supply the public with a first-rate article, in both cement and lime, on moderate terms. Persons sending orders for cement, are respectfully requested to say for what purpose it is required, and printed instructions will be affixed to the head of each cask. Orders to be addressed to Mr. THOMAS WEEKES, Agent at the Works.



Agents in London:—Messrs. GEORGE POTTER and CO. Lime Merchants, Purfleet Wharf, Blackfriars; and 19, North Wharf-road, Paddington.

KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE, 5, ADELAIDE-PLACE, London bridge.

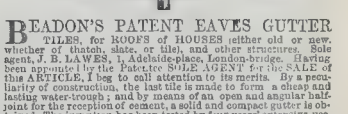
BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Countin-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

WHITE SUFFOLK PERFORATED BRICKS.—Messrs. J. EASTWOOD and SONS take this opportunity of informing their customers and the trade, that they have made arrangements for the Manufacture of White Suffolk Perforated Bricks. In curing defects common to bricks of this description, care has been bestowed to produce them of a true and perfect shape, of an even and beautiful surface, and free from fire-flaws.—J. EASTWOOD and SONS, Belvedere-road, Lambeth.



TO BUILDERS AND CONTRACTORS

RISBRIDGE NEW UNION WORKHOUSE.—GOOD BRICK EARTH can be had within a short distance of the site, on reasonable terms.—Apply to Mr. THOS. T. FROST, Wratting Wash, Haverhill.
February 13, 1856.

PRIZE BRICK-MAKING MACHINE.—Chamberlain's Patent.—This portable machine will make 20,000 solid bricks per day, of far superior quality to hand-made, with 3-horse power; one man to feed the machine with clay, and boys to remove the bricks. For a plate and description, see "Practical Mechanic's Journal," for January 1, 1856. Any further information, or the machines seen at work, on application to Mr. HUMPHREY CHAMBERLAIN, Kempsey, near Worcester.

TO BUILDERS and OTHERS.—BRICKS delivered to any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 23s. per thousand; Grizzles, 20s. per thousand; Rough Stocks, 30s.; Place, 10s.—Terms, cash ton delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

BEADON'S EAVES GUTTER TILES.—Mr. LAWES is prepared to CONTRACT for the ERECTION of the above TILES on roofs of all descriptions, in the neighbourhood of London, at 2½ per foot; above 50 feet, 3d.—Office, 1, Adelaide-place, London-bridge.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES (either old or new, whether of thatch, slate, or tile), and other structures. Sole agent, J. B. LAWES, 1, Adelaide-place, London-bridge. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough; and by means of an open and angular half-joint for the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with unfailing success. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses. It is cheap and permanent, and requires no keep. It merits the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal, at the works, Velvetholt, near Rugby; or in London, Gloucester, or Bridgewater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 6d.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 27, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 931, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

MANDER, BROTHERS,

VARNISH MANUFACTURERS,

WOLVERHAMPTON,

And 37, UPPER BAKER-STREET, LONDON.

MANDER BROTHERS have to announce to their Friends at the Trade and General that in consequence of the increase of their London Trade, and to accommodate their Customers, they have taken the Premises,

No. 37, UPPER BAKER-STREET,
DORSET SQUARE (near the New-road),

as a Depôt for their Varnishes, where for the future a Stock of every description will be kept, ready for immediate demand.

MANDER, BROTHERS (who have had a Medal awarded to them at the recent Paris Exhibition), have recently effected very important Improvements in their Varnishes, which have produced a beautiful Polish of surface with great Durability, more particularly for OUT-DOOR WORK.

Samples can be had at the Depôt.

Mr. W. M. G. KELLEY, Agent
ESTABLISHED IN 1801.

AWARDED TO MANDER, BROTHERS.

N.B. A large Stock of Dry Prepared Flooring, &c. from Two to Four Years Old.

EDWARD SIMMS begs to inform Builders and the trade that he has now on hand at his manufactory, the best of its kind ever offered, a large assortment of PREPARED FLOORING and MATCH BOARDING, seasoned, and ready for use, from 4 inch to 1½ inch thick, in White or Yellow Deal, or Pitch Pine. Also Dry Deals, in all thicknesses, for Packing Cases, Pitch Pine Flank, and Scantlings. Mouldings in clean Pine, to any design. A pattern list forwarded on application.—Address, E. SIMMS, Flooring Manufactory, Wilton-road, Pimlico; and Sawing, Planing, and Moulding Mills, Ebury-street, Chelsea.

OAK SASH-CILLS, QUARTERING, &c. ready cut out to sizes and laths required, at the lowest price.

Address, E. SIMMS,
SAWING, PLANING, AND MOULDING MILLS,
KINGS ROAD, CHELSEA, AND WILTON ROAD, PIMLICO.

COUNTER TOPS.—R. VIGERS, TIMBER MERCHANT, Kennington, Surrey, solicits the attention of builders and shopfitters to his carefully selected MAHOGANY, suitable for Counter Tops, and to his seasoned Materials for builders cabinet and joiners' work. Deliver by cartage free to any of the London railway stations, or within three miles of Kennington Church.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

TO BUILDERS, CARPENTERS, &c.

SAMUEL CROWHURST, Jun. begs to call the attention of Builders, Cabinetmakers, &c. to his Stock of seasoned and well assorted Timber Goods, Deals and Battens in Logs, Planks, Boards, &c. at prices which will be found equally low as any advertised. Country Builders supplied on the most liberal terms. Timber yard, Hanover-street, Walworth; and Princes-street, Newington, near the Church.

LETT'S WHARF PATENT SAWING, PLANING, and VENEER CUTTING MILLS, Commercial-road, Lambeth.—The proprietors beg to announce to the trade that they have completed their extensive arrangements, and will be happy to execute all orders intrusted to their care with despatch and punctuality.

N.B. All goods sawn at these mills fetched and delivered free of charge.

SPECIAL NOTICE.

The Books of the Society close on the 31st of March, and Proposals lodged at the Head Office, or with any of the Agencies, on or before that date, will secure the advantage of the present year's entry, and of One Year's Additional Bonus over later Proposals.

MUTUAL LIFE ASSURANCE.

The Whole Profits divided amongst the Assured.

THE SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY Instituted 1831. Incorporated by Special Act of Parliament.

The fund accumulated from the contributions of members, exceeds SIX HUNDRED THOUSAND POUNDS STERLING.

The annual revenue exceeds ONE HUNDRED and SIXTY-THREE THOUSAND POUNDS.

The amount of existing assurances exceeds FOUR MILLIONS and a QUARTER STERLING.

The amount paid to the representatives of deceased members exceeds SIX HUNDRED and FIFTY THOUSAND POUNDS, being SEVEN EIGHT THOUSAND POUNDS above Seventy per cent.

The NEXT DIVISION of PROFITS TAKES PLACE at the 1st of MARCH, 1856, and policies effected before that date receive one year's additional bonus over those effected after that date.

WILLIAM HILLHOUSE, Manager.
WILLIAM PINLAY, Secretary.
Head Office—20, St. Andrew-square, Edinburgh.
London Office, 126, Bishopsgate-street, corner of Cornhill.
W. H. SMAIRIDGE, Interim Agent.

SPECIAL NOTICE

KENT MUTUAL ASSURANCE SOCIETIES.
HEAD OFFICES:
QUEEN-STREET-PLACE, NEW CANNON-STREET, LONDON.

The united annual incomes exceed 27,000l.; and all Profits belong to the Assured.

LIFE

The next division of Profits will include parties assuring before the 30th March next.

The new business of the last eight months exceeds 5,000l. in Annual Premiums.

FIRE.

The Guarantee Fund is being increased to Half-a-Million.

The annual income, since last annual meeting, has increased beyond 500l.

GEORGE CUMMING, Manager.

N.B. Agents are still wanted for some vacant localities.

SIXTH LOND-

UNION ASSURANCE SOCIETY.—(FIRE—LIFE—ANNUITIES).

Instituted in the reign of Queen Anne, A.D. 1714.
Cornhill, and 70, Baker-street, London.
Chairman—J. Remington Mills, esq.
Deputy-Chairman—Henry Ashwin Barnes, esq.

James Bentley, esq.	J. bn Paynter, esq.
Thomas Bodley, esq.	John Rees, esq.
Darnell Bryden, esq.	Henry Rich, esq.
Nicholas Charrington, esq.	George Spencer Smith, esq.
B. Preston Child, esq.	Richd Hor-man Solly, esq.
William Colpin, esq.	W. Foster White esq.
Thomas Mills, esq. M.P.	Samuel Wilson, esq. Ald.
John Morley, esq.	Stephen Wilson, esq.

The LIFE BONUS of the year 1853, of four-fifths of the profits of the LIFE DEPARTMENT, has been just declared, and (with the exception of a reserve of nearly 50,000l. to accumulate towards the next Bonus of 1858), is payable upon and with the sum assured, being at the rate of 10l. 18s. per cent. for the last seven years, on Policies effected in Great Britain upon the Profit System.

THIS BONUS MAY BE APPLIED EITHER

By having the annual premium reduced for the next seven years, which will in many cases extinguish the same for that period,

Or by adding the amount to the sum insured;

Or the value thereof may be received immediately in money.

The Directors beg to state that, by a recent change in the regulations of the Society, the assured from the advantages of MUTUAL OFFICES by sharing the entire profits less one-fifth as a small compensation for the necessary guarantee, and are free from the liability incurred by the members of such Societies.

The accumulated invested capital now amounts to upwards of ONE MILLION sterling.

THOMAS LEWIS, } Joint Secretaries.
WM. B. LEWIS, }

Prospectuses and full particulars may be had at the Offices, 24, Guildford-street, Russell-square.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours, and by exhalations. Being completely unaffected from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc, if any such compounds are offered, they must be under in consequence of impurity in the material primarily in use for producing it, the imperfect mode of production, and by which the oxide contains substances calculated to injure its colour, weight, it then produces a very inferior instead of a very superior paint, and the evil of having realised by the purchasers of such adulterations a very expensive result to the owners and premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BUNDELL, SPENCE, and Co.; when ground and dry by Messrs. T. B. THORNEY and Co. and the Company's Original Agents in London, Messrs. CHARLES DEVAUX and Co. Wholesale Agents, 82, King William-street City; and by the Manufacturing and Painting Agents, Mr. FREDK. BRABY, Fitzroy Works, Euston-road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting shops, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and Co. Tanfield, and in Southampton, by Mr. R. J. BUCHAN. Dry OXIDES and PAINTS in kegs of 14, 21 and 28lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Cork and the Isles of Jersey, Guernsey, Alderney, and Sark; and Wexford in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting work by contract.

For further particulars, apply to the Company's Central Agency in London, 12, Manchester buildings, Westminster.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIALS and WORKMANSHIP in TERRA-COTTA to M. H. BLANCHARD, late of Coade's Original Works, and successor to Mr. Eyton in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, for the adornment of our public buildings, and is the only real material that is capable to stand the ravages of time unimpaired. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and qualities that will defy competition. A large Stock of newly-designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

BLASHFIELD'S PATENT TERRA-COTTA, Manufactured at Mill-wall, Isle of Dogs. Capitals Consoles, Tracery for Parapets, Balusters, String Courses, Friezes, Bas-relievi, Vases Statues, Chimney-shafts, and all other Architectural Ornament, modelled, finished, and burnt, in the best manner, and warranted to stand heat and frost, or the Buff or Red-coloured Terra-cotta.—A great variety and large stock may be seen at BLASHFIELD'S Warehouse and Show-room, No. 1, Praed street, Paddington.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is JACKSON'S WHOLESALE WAREHOUSE, 23, GREAT PORTLAND-STREET, Oxford street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom. THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, House-agents, Decorators, and large consumers will do well to visit this establishment.

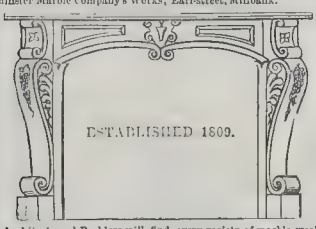
TO BUILDERS, MARBLE MASONS, AND OTHERS.

THE LIZARD SERPENTINE COMPANY have to acquaint the public, that the Serpentine Chimney-pieces and other articles, recently sold by public auction in London, were not the produce of any of the Quarries belonging to the LIZARD SERPENTINE COMPANY, which continues successfully to carry on its business in Slab and Manufactured Goods, in stone of very superior quality, and in great variety of colour, at the Factory, Poltesco, Lizard. Show-rooms, 20, Surrey-street, Strand.

HENRY COX, Manager, Poltesco, Lizard.
F. W. RUFFLE, Agent in London.

ITALIAN and GALWAY MARBLE QUARRIES.—Depôt, WHITEHALL WHARF, Parliament-street, Westminster.—Mr. FRANKLIN begs to invite the Sculptors, Marble Masons, Builders, &c. to inspect his extensive STOCK of Italian, Irish, and foreign MARBLES, which he is constantly importing in blocks and slabs, consisting of upwards of twenty different varieties, which he is enabled to offer at very reduced rates. Several large blocks of statuary, suitable for sculpture, &c. now landing.

Lloyd's Marble Wharf, Thames-bank, Pimlico, Adjoining Vauxhall-bridge.



ITALIAN STATUARY, veined, Sicilian, dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharf at all hours.

MARBLE.—The Italian Marble Company, Importers of the produce of their many quarries in the province of Massa-Carrara, Italy, beg to inform the general marble trade in the United Kingdom that they are prepared to undertake Contracts for any quantity of Statuary, Veined, Sicilian, Bardilla, Dove, and other Marbles, in blocks of all dimensions, delivered on shipboard at Leghorn, or in dock, London. A constant stock is always kept at the London Depôt. Orders for Paving Slabs, Garden and Hall Statues, Vases, Terrass, Consoles, &c. executed and delivered at reasonable rates.—For further particulars apply at the Offices of the Company, 18, Cannon-street, City.
WILLIAM W BONNIN, London Secretary.

TO SCULPTORS BUILDERS, MASONS, &c.

B. FABBRICOTTI respectfully invites the Gentlemen connected with the Marble Trade to inspect his fresh STOCK, composed of statuary, vein, Sicilian, black and gold, dove, Bardilla, Siena, and Breccia, in blocks and particularly calls their attention to a large quantity of his best statuary, sixty blocks, of all sizes, just landed.
Monuments, vases, and statues, finely executed in Italy.
Carrara Wharf, Thames-bank, Pimlico.

SCULPTURED STATUARY MARBLE CHIMNEYPIECES, in great variety, on view at the Westminster Marble Company's Works, Earl-street, Millbank.

Architects and Builders will find every variety of marble work executed in a style entirely unequalled, and will realise an immense saving, by forwarding orders to this establishment. The Trade supplied.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.
THOMAN JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble: bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Woods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to

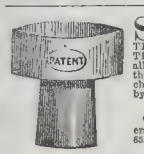
FOR MACADAMIZING ROADS.—The HARDEST and most DURABLE STONE.—The Proprietor of an extensive Quarry at Duncannon Rock, containing Blue Elvin Granite, is open to contract for to supply any quantity of the above stone, its durability having been tested, and proved to be 25 per cent. harder than Guernsey Granite. For further particulars apply by letter to Mr. JOHN NEWTON, Norway-wharf, Hertford-road, Kingsland-basin.—Two Coal Waggons for Sale.

SLATE CISTERNS, SINKS, and every description of SLAB-WORK, in Slate, Roofing Slates, or Cover Stones, kept in stock and made to order in any quantity, and to any amount in the above, at extremely low prices, but guarantees a first-class material in all respects, similar to the slate he has used in fitting up and covering the principal mercantile and Governmental buildings in the City. A priced list sent on application.—TREVALGA WHARF, Ratcliff-cross.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Brahy's, Belvidere-road, where terms may be obtained.

PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of lavatories, chiffoniers, consoles, &c.; baths, baptisteries, altar-tablets, pilasters, columns, vase pedestals and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 20 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

TO CONTRACTORS, BUILDERS, &c.—EIGHTY AXE-DRESSED GRANITE BLOCKS TO BE SOLD a bargain. They are worked all round, and the beds made and taken to a height. The lengths are 3 feet 3 inches and 2 feet 7 inches, 1 foot 11 inches wide and 1 foot 9 inches high. To be seen at the South Devon Wharf, Lower East Smithfield.—Price and particulars can be had by applying, by letter only, to B. R. PENTON, Post-office, Lupus-street, Pimlico.



ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations,
FROM 2s. 9d. PER SQUARE YARD.
Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.
Apply to JOHN PILKINGTON, Poloneeau and Limmer Asphalte Office, Montmort-chambers, 4, Fish-street-hill, London.
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

O. MCARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.
W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No. 81 Wharf, Harrow-road, to 8, North Wharf-road, Paddington, have now on sale good Garden and Screened Gravel. For terms, &c. apply at the Wharf.
Contractors supplied to any extent.

H. DOULTON & CO'S.
TERRA-COTTA CHIMNEY-TOPS
Will withstand the action of the Weather and Sea Breezes, and are
QUITE IMPERISHABLE.
Prices not much higher than Cement.
DOULTON & CO.'S
TERRA-COTTA POTS, &c.
Erected in London upwards of 20 years since, are now as sharp and perfect as when first manufactured
Drawings on application to
H. DOULTON & CO. High-street, Lambeth.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTCH'S PATENT WIND-GUARD.—This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.

To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Benchurch-street, London.

By Her Majesty's Royal Letters Patent.

DUPREE and CO.'S DEFIANCE WIND-GUARD and VENTILATORS, &c. for the perfect cure of Down-draft Smoky Chimneys, suitable for Public and Private Buildings requiring a constant change of air.
Also,
SHIP VENTILATORS, requiring no attention, imparting about six times the quantity of fresh air than any other in use.
Also,
VENTILATING SKYLIGHTS, for Slate or Tile Roofing, without Paint or Putty.
Prospectuses sent on application.
London Depôt—ESNOUF and MANGER, 141, Minories, City.

NEW PATENT SMOKE PREVENTER. The Rev. James Burrow, of Ashford Parsonage, Bakewell, has appointed WILLIAM S. BURTON, of 29, Oxford-street, sole Metropolitan Agent for the sale of his SMOKE PREVENTERS. They have been used under many varied circumstances with great and uniform success. They are very simple, and not liable to get out of order. Price 10s. 6d. 12s. 6d. and 16s. each.
The alterations and additions to these extensive premises (already by far the largest in Europe) which occupied the whole of last year, are of such a character that the entire of EIGHT HOUSES are devoted to the display of the most magnificent stock of GENERAL HOUSE IRONMONGERY, including Cutlery, Nickel Silver, Plated Goods, Baths, Brushes, and Turnery, Lamps and Gaseliers, Iron and Brass Bedsteads and Bedding, so arranged in Sixteen Large Show-rooms as to afford to parties furnishing facilities in the selection of goods that cannot be hoped for elsewhere.
Illustrated Catalogues sent (per post) free.
39, OXFORD-STREET; 1, 1a, 2, and 3, NEWMAN-STREET; and 4, 5, and 6, PERRY'S-PLACE. Established 1820.

HANDS'S PATENT ECONOMISING KILN is the only simple and effectual mode to use the Heat, for drying moist moulded clays, sound at any season, in time of burning and cooling the kiln, with perfect ventilation.—Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

TO THE COMMISSIONERS OF THE BOARD OF HEALTH, AND TO ALL PERSONS INTERESTED IN THE SMOKE QUESTION.
HANDS'S PATENT is the only simple and certain remedy for the SMOKE NUISANCE; it has combined, where necessary, the advantages of a drying process and perfect ventilation, without a particle of complicated machinery. Address to Mr. JOHNSON HANDS, Brick and Tile Works, Epsom.

THE PERMANENT WAY COMPANY, 26, Great George street, Westminster, have now published a Second Edition of their CIRCULAR, which may be had post-free upon application. Among other recent important inventions, the Company beg to call particular attention to Prince's Patent for Casting Railway Chairs, Pole's Patent Improved Fish Joint, and Jas. Boucherie's Improved Process for Preserving Sleepers, Fencing, Telegraph Posts, &c. from decay.—For any information may be had upon application to CHARLES MAY, F.R.S. the Manager; or to WILLIAM HOWDEN, Secretary.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s per foot super, together with every particular of its cost, application, &c. can be obtained of Mr. BURT, 9, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

ROYAL POLYTECHNIC.—Next Monday Evening Lecture on the 25th, at 8, by the Rev. A. Bath Power, A.M., on Force, in relation to Mechanical Structures. During Lent, Mr. Pepper will lecture on Elementary Astronomy, illustrated with magnificent Dissolving Diagrams, and appropriate Music from Haydn and Handel, every Wednesday and Friday mornings at 2, evenings at 8.
NOTICE.—Alteration of Hours. During the Astronomical Lectures, Mr. Pepper's Lecture on the Poison Strychnine will be given only on Monday and Saturday mornings at four, and Tuesday and Thursday, at 4 and 8. Mr. F. Lennox Horne's Series Comic Musical Lectures and the much-admired Wax Figures at 9.30, on Tuesday, Thursday, and Saturday. Schools, Wednesday and Friday, at 4 and 9, and Tuesday, Thursday, and Saturday mornings, at 11.

The short-barrel Pump is very convenient for fixing in situations of limited height and space, for the supply of coppers and sinks in wash-houses with soft water from underground tanks, or in hot, forcing, and plant houses; they may be fixed, when desired, under the stage.—May be obtained of any Ironmonger or Plumber in town or country, at the above prices, or of the Patentees and Manufacturers, JOHN WARNER and SONS, No. 8, Crescent, Jewin-street, London.—Every description of Machinery for Raising Water, by means of wheels, vans, deep well pumps, &c. Also, Fire and Garden Engines, &c. &c.—Engravings sent on application.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.
Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,
Engineers and Contractors,
John's-place, Holland-street,
Southwark, London.

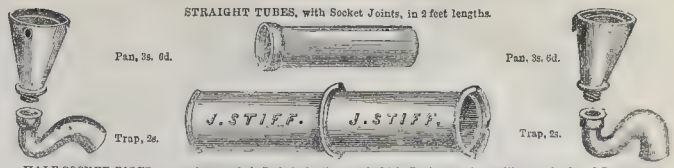
PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

PUMPING and WINDING ENGINE.—TO BE LET ON HIRE, or for SALE, a nearly new strong and simple PUMPING and WINDING STEAM ENGINE, of 10-horse power, by Medwin and Hall, with a pair of 10-inch pumps and all the driving gear complete. The contractor for whom it was fitted up will make a considerable sacrifice on the cost price, or let the whole on hire.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, 92, Blackfriars-road.

STEAM-ENGINES for SALE.—A Six and a Ten horse High-pressure. Also, a Donkey Engine.—Apply to JOHN DUFF and CO. Engineers, Glasgow, Makers of Laird and Marine Engines, Boilers, Derrick and other Cranes, &c.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.—Second Testimonial.—"March 10th, 1852. In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.



THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

GREAT REDUCTION IN PRICES.

JAMES STIFF,

MANUFACTURER OF GLAZED STONEWARE DRAIN PIPES, WATER-CLOSET PANS, SINK TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE AND OTHER PURPOSES,
LONDON POTTERY, HIGH-STREET, LAMBETH, LONDON.

STRAIGHT TUBES, with Socket Joints, in 2 feet lengths.

HALF-SOCKET PIPES same prices as whole Sockets, by the use of which, Drains may be readily examined, and Junctions INSERTED, IN THE EVENT OF REQUIRING FURTHER CONNECTIONS.
Drawings, with Prices, will be forwarded free, on application

WILLIAM INGHAM AND SONS,

WORTLEY FIRE-BRICK, GAS RETORT, SANITARY PIPE, AND TERRA-COTTA WORKS, NEAR LEEDS, YORKSHIRE,

Manufacturers of Glazed Sanitary and Water Pipes, from 2 to 36 inches diameter; Invert Blocks for Sewer Bottoms, Closet-pans, Fire-clay Gas Retorts, Fire Bricks, Chimney Tops, Crucibles, and a variety of Articles in Terra-cotta.

N.B. Superior Fire-clay, for Glass-house Pots and Crucibles.

London Agents—Messrs. CHADWICK and AKEROYD, Willington Stone-wharf, Regent's-park Basin.

Manchester Agent—Mr. TODD CARR, Arch 14, Birmingham-street, London-road Station.

Burnley Agent—Mr. JAMES SAGAR, Canal Wharf.

Leeds Stores—Albion-place, Albion-street.

W. I. & SONS beg to inform Architects, Engineers, Contractors, Iron Masters, Builders, &c. that the whole of the above-named Articles are manufactured from the celebrated Wortley Fire-clay, and they (having worked the same for upwards of thirty years) can furnish first-class references.

GREAT REDUCTION IN PRICE OF SMITH'S DRAIN-PIPES.

THOMAS SMITH begs respectfully to call the attention of Contractors, Builders, &c. to the GREAT REDUCTION in his PRICES of GLAZED STONEWARE DRAIN-PIPES, &c.

T. S. is the Original Manufacturer of the CONED or REBATED SOCKET-PIPES, and the Medium-backed Closet-pans (with superior White Enamel Glaze inside), as made under the direction of Mr. JAMES PILBROW, Engineer to the Tottenham Local Board of Health, with which he is now supplying several large towns.

N.B. Half-socket Pipes same prices, which obviate all difficulty arising AT ANY TIME from the Inspection of Pipes in the event of a Stoppage occurring, or a Junction being required to be inserted.

DRAWINGS AND LISTS OF PRICES FORWARDED FREE ON APPLICATION.

MANUFACTORIES,—71 and 72, PRINCES-STREET, LAMBETH; and ALBION POTTERY, OLD FORD, BOW.

MR. M. B. NEWTON,

Late MANAGER and CORRESPONDENT to the FARNLEY IRON COMPANY'S FIRE-CLAY and TERRA-COTTA WORKS, having relinquished the above engagement, respectfully intimates to his Friends that he has OPENED

THE WHARF No. 4, KING'S CROSS GOODS STATION, LONDON, as a DEPOT for GLAZED SANITARY TUBES, FIRE-BRICKS, CLAY RETORTS, and OTHER GOODS, MANUFACTURED BY

JOSEPH CLIFF, WORTLEY, NEAR LEEDS.

N.B.—PRICE LISTS having just undergone a revision, Parties will meet with the most liberal Terms at this Wharf.

(Further Advertisement next week.)

TO ENGINEERS, MACHINE MAKERS, AND OTHERS.
CHARLES MACINTOSH and CO. Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER in all degrees of elasticity, recommend this material as capable of sustaining the action of hot or cold water, gas, steam, acids, and grease. It is used extensively for valves in marine and land engines, railway buffers and springs, washers for pipe-joints, hose and tubing; also for gas holders, sand pumps, alkali cisterns, &c. &c. Articles, moulded or otherwise, made to any size or figure.—Address, 3, Cannon-street West, London; and Cambridge-street, Manchester.

TO ENGINEERS, MILL-OWNERS, &c.
N. Woolwich Elastic Steam-packing (Canvas and India-rubber), at 1s. 8d. per lb.

S. W. SILVER and CO. INDIA-RUBBER WORKS, North Woolwich (opposite H. M.'s Dockyards), having considerably extended their manufacture in order to meet the daily increasing demand upon them for this effective and durable article, are enabled to offer the very best material at the reduced price of 1s. 4d. per lb. for sheet and rope.

Testimonials may be seen at S. W. SILVER and CO.'s Warehouses, Nos. 3 and 4, Bishopsgate-street (opposite London Tavern), where orders for Steam Packing, also Buffer Springs, Pump Clacks, and the various India-rubber appliances, will meet with prompt attention.

CAUTION.—S. W. S. and Co. have found it necessary to stamp all their manufacture, thus "S. W. SILVER and CO. WORKS, NORTH WOOLWICH."

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.

Diving-dresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.

Vulcanized Rubber in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.

N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 60 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster.

No. 1 quality, inches diameter, and price per yard.

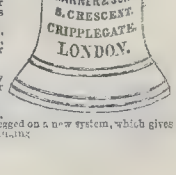
2s.	2s. 3d.	2s. 6d.	2s. 9d.	3s. per yard.



No. 0. A cheaper hose, to bear a low pressure for gardens and agricultural purposes, at greatly reduced prices.

1	1½	2	2½	2½ inches.
9d.	10d.	11d.	1s.	1s. 3d. 1s. 6d. per yard.

The hose is Burnettized at an extra charge of 3d. per yard
Union Joints, Branch Pipes, and Jets, are also supplied.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for hanging. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives superior tone and facility for ringing.

DAVID MOUNTAGUE, Manufacturer of every article of Lambeth POTTERY, having now further reduced the prices, begs to offer to consumers and others, STONEWARE PIPES, &c. &c. on the most advantageous terms. The new lists of prices will be forwarded on application as above.—Feb 11, 1856.

SUPERIOR LAND DRAINAGE.—AGRICULTURAL DRAIN-PIPES of all sizes, and in any quantities, can be SUPPLIED, either by water or land carriage, at a reduced rate, by applying to L. E. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

TO LOCAL BOARDS OF HEALTH AND GAS AND WATER COMPANIES.

FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

CLOSET BASINS, WHITE and BLUE, URINALS, &c.

MANUFACTORY—MILLWALL.

DEPOT:

ARTHUR-STREET, NEW OXFORD-STREET.

PATENT SELF-ACTING WATER-CLOSETS, with ECONOMIC WATER-REGULATORS, manufactured on the newest principles, discharging with powerful flush over the surface of the basin, a smaller quantity of water than is usually needed, and effectually preventing waste. Admirably adapted for RAILWAY STATIONS, HOSPITALS, WORKHOUSES, and all public establishments. Also HIGH and LOW-PRESSURE powerful FLUSHING WATER-CLOSETS. Drawings, testimonials and references of the highest respectability can be had on application. Specimens of which can be seen fixed upon the Premises of the Patentee, W. PATTEN, 22, Old Fish street, near St. Paul's, London. Price for Closet and Apparatus complete, from 28s. and perfect action guaranteed.

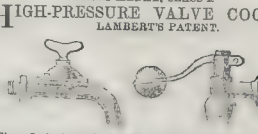
MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c.; also FIRE BRICKS, Vitrified Blue Bricks (as used by her Majesty's Commissioners of Sewers), White Fire Clay, Facing Bricks, &c. &c. Agents.—CHARLES RICHARDSON, No. 6, South Wharf, Paddington, London.

SUPERIOR STONEWARE GLAZED PIPES of a quality not to be surpassed.—E. and W. STURGE respectfully invite attention to the very superior character of their pipes, which they are confident are such as must give great satisfaction,—the price being not lower than many in the trade, viz. 25 per cent. discount off the list for cash. Junction Bends, &c. Pans and Traps of the first quality. Yorkshire Paving, Sinks, Sills, &c. all at low cash prices. E. and W. STURGE, Bridge Wharf, City-road.

N.B. A small extra charge is made upon goods required to be delivered. October 1, 1855.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or ware.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 2.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

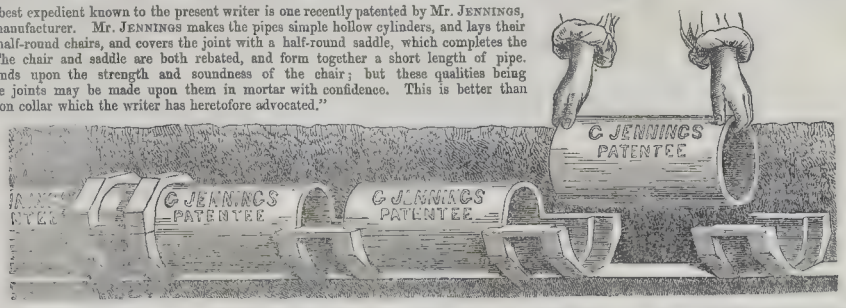
These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,

Brass and Iron Founders, Short-street, Newington, Lambeth.



TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of Cordage made by Builders up to the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 113, Fore-street, City. Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

TO ENGINEERS, ARCHITECTS, SURVEYORS, AND OTHERS, INTERESTED IN EFFICIENT DRAINAGE.

Extract from the "ENCYCLOPÆDIA BRITANNICA," *Vol.* 8, *Part I. page* 129, *on Drainage of Towns, by* W. HOSKING, *Esq.*

"Simple hollow cylinders, whether of iron or of pottery, are more likely, with the same care in the manufacture, to be sound than socketted pipes of either ubstance; and for this reason, if for no other, pot pipes should be simple hollow cylinders, and some other expedient ought to be employed for making the joints, han that by which the pipe is liable to be rendered both unsound in its manufacture, and impracticable *when the work requires to be repaired*. Expedients have een devised to this effect, and are gradually making their way into use.

"The best expedient known to the present writer is one recently patented by Mr. JENNINGS, London manufacturer. Mr. JENNINGS makes the pipes simple hollow cylinders, and lays their nds upon half-round chairs, and covers the joint with a half-round saddle, which completes the rcuit. The chair and saddle are both rebated, and form together a short length of pipe. uch depends upon the strength and soundness of the chair; but these qualities being ecured, the joints may be made upon them in mortar with confidence. This is better than ne sheet iron collar which the writer has heretofore advocated."

In the "BUILDER" of February 9th, GEORGE JENNINGS stated that the price of his Patent Drain-Pipes, with all the advantages they offered, were "the me price as charged by the respectable London Potters." Two days after the appearance of this advertisement, all the Potters issued fresh lists, REDUCING HEIR PRICES AND INCREASING THEIR DISCOUNTS. And in the "BUILDER" of the 16th instant, one week after GEORGE JENNINGS'S dvertisement, no less than seven notices of "GREAT REDUCTION IN PRICES" appear. THIS MAY OR MAY NOT BE OWING TO THE OVERTISEMENT OF THE 9TH INSTANT. But to PREVENT MISTAKES, GEORGE JENNINGS does not AT PRESENT propose any reduction in e price of his Improved Pipes, as charged in list prior to the 9th of February, hoping the quality of the article, combined with acknowledged advantages, will worth the halfpenny or penny per foot charged in excess of THE PRESENT London Potters' prices.

The Show-rooms now built on Jennings's Wharf, Holland-street, Blackfriars, will be open in March next, for the Exhibition of Sanitary Inventions, suitable r EVERY CLASS OF BUILDING, PUBLIC OR PRIVATE. In the meantime, Illustrated Particulars and Prices of JENNINGS'S Self-acting and other aterclosets, Urinals, Lavatories, Pumps, Sluice-Valves, Fire and other Cocks, Gully-traps, Shop-shutter Shoes, Earthenware Drain and Soil Pipes, &c. &c. n be had free, on application, or by post, on enclosing two stamps to

GEORGE JENNINGS, SANITARY ENGINEER, GREAT CHARLOTTE-STREET, BLACKFRIARS.

Note.—The attention of Architects is particularly invited to a NEW DOUBLE-SEATED VALVE CLOSET, recently patented by G. JENNINGS. It is ccedingly simple, noiseless, and must be durable. The Patentee has such confidence in its efficiency, that a warranty for SEVEN YEARS will be given with ery Closet sold. Same Price as ordinary Valve Closets, in their different qualities.

REAT REDUCTION in PRICE of STONEWARE DRAIN-PIPES.

WILLIAM NORTHEN,

UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH,

Begs to call the attention of Surveyors, Contractors, Builders, and others, to a very great REDUCTION in the PRICES of his

GLAZED STONEWARE DRAIN-PIPES.

LISTS OF PRICES FORWARDED ON APPLICATION.

GREAT REDUCTION IN PRICES

OF WHOLE OR HALF-SOCKET GLAZED STONEWARE DRAIN-PIPES.

AN ILLUSTRATED LIST OF PRICES SENT FREE ON APPLICATION TO

HENRY MILLICHAMP,

MANUFACTURER OF EVERY KIND OF STONEWARE DRAIN-PIPES, BENDS, JUNCTIONS, &c. &c.

BY PATENTED MACHINERY, AND UPON THE MOST APPROVED PRINCIPLE.

MANUFACTORIES—55, PRINCE'S-STREET, LAMBETH, and BRUNTON'S WHARF POTTERIES, COMMERCIAL-ROAD, LIMEHOUSE.

ALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS,

TRAPS, &c. at the

NEAR POOLE, DORSET.

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree hardness, are very far superior to the best ware hitherto manufactured in Hants and Dorset; they are made of clay of the est quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon appli- dion to THE AGENTS:—

Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London;
Mr. J. S. HUDSON, the Pottery, Bournemouth, Poole;

Where a large stock is always kept on hand.

UNDERHAY'S PATENT REGULATOR CLOSETS for constant or intermitting supply, dispense with Cisterns, Service Boxes, Valves, Levers, Cranks, Levers, &c. &c.; much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets, on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed. 5,000 of them have been sold, and no instance of failure has occurred.

These Stop-valves are cheaper, stronger, and more ornamental, than any other Many thousands are in use, and greatly approved of.

Manufactured by
CHARLES BUTTEN and SON,
Brass Founders, Crawford passage, Clerkenwell London.

BY HER MAJESTY'S ROYAL LETTERS PATENT, APRIL 27, 1855.

JAS. LEWIS'S PATENT STENCH-TRAP

FOR STREET U-E.

Price, with Gutter Plate, 18 inches by 12 inches, each 25s.; weigh about 2 cwt. Larger sizes made, if required.

FOR AREAS, &c.

Price, with Back Plate, 6 inches by 7 inches, each 6s.

FOR COURTS, YARDS, &c.

10 inches by 8 inches, each 10s.

The above articles are protected for the Patentee by the British Government, on account of their construction for the advantages they possess, being a perfect trap for preventing smell proceeding from itself or the drain, should there be water or not in the pan. When stench-traps are put down generally speaking no attention is ever paid to them afterwards—this renders them useless. The above, therefore, are a desideratum, as they require no attention. It is well known when cholera has visited this country, it commences and leaves last those places where the air is vitiated by noxious gases proceeding from drains, &c.

Any inhabitant suffering any inconvenience, is entitled, by the Sanitary Act to lay complaint before the public or private authorities of the property, to lay down stench-traps where they are required. Any persons interested in this advertisement will be kind enough to write to the patentee for drawings and if wishful, testimonials. Please order from any respectable Ironmonger contractor, or the Patentee, JAMES LEWIS, Ironfounder, Abergavenny. Specimens to be seen in the Court of Inventions, Crystal Palace, Sydenham

COLLIER'S TERRO-METALLIC and RED BARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. S. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

PATENT DRAIN-PIPES, UNGLAZED, manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine Elms, London, and at all their Warehouses.

PRICES.

3 inch bore, in 2 ft. 6 in. lengths, at						3d. per foot.

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture. And it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

SALES BY AUCTION.

TO CONTRACTORS, BUILDERS, BRICK-MAKERS, AND OTHERS.—The valuable Lease of extensive Brick fields at West Drayton, Middlesex, a short distance from the Station on the Great Western Railway, and possessing important frontages to the Grand Junction Canal: also a Beer-Shop, House, and Shop, and Twenty-six Cottages.

Frontage, about 37 feet; depth 130 feet. The Court will meet at the Premises, on TUESDAY, the 4th inst. at TWO o'clock precisely, to receive TENDERS for the same, on TUESDAY, the 4th MARCH next. The premises may be viewed by permission of the tenant, and further particulars may be obtained of JOSEPH JENNINGS, Esq. 3, Foley-place, Cavendish-square; and of CLARK, TAYLOR, and BADMBURY, Solicitors, No. 18, Basinghall-street.

FREEHOLD GROUND, CHANCERY-LANE and PETTERLANE.—The Commissioners of Sewers of the City of London hereby give Notice, that they will meet at the GUILDHALL of the said City, on FRIDAY, the 29th of FEBRUARY next, at TWELVE o'clock at noon precisely, to receive PROPOSALS for the Grant or Building Lease for Forty Years of certain PLOTS of GROUND, situate at the south-west end of Chancery-lane, and the south-east end of Petter-lane.—Further particulars may be had at the Sewers' Office, Guildhall, of Mr. HAWARD, the Surveyor to the Commission, at the Office, 10, Guildhall. The Commissioners will require a plan and elevation of the premises proposed to be built, to be submitted to them for approval; and do not bind themselves to accept any proposal. Unless delivered sealed to them.

JOSEPH DAW, Principal Clerk.
Sewers' Office, Guildhall, January 2, 1856.

HARROW.—FREEHOLD LAND.—To BE SOLD, by Auction, in suitable lots, and several other eligible plots of FREEHOLD LAND, at a moderate price per foot, on the Harrow Railway Station, and situated and intersected by capital Roads. Residents entitled to the privileges of the Harrow School, and the London and North Western Railway Company's Season Tickets. Plans and particulars of the Estate, with conditions of sale, may be had of Mr. WILLIAM B. COOPER, Esq. Solicitor, 3, Verulam-buildings, Gray's-inn

FREEHOLD LAND TO BE LET, for long terms, at peppercorn rents, and for building on the Estate, Bromley, suitable for manufacturing premises, near the East and West India Docks, for fourth-rate houses; in the East India Dock-road, for second or third-rate houses; near the Victoria Docks, for fourth-rate houses, and any improved ground-rents made may be purchased; on Windmill-hill, Gravesend, overlooking the river Thames, for second or third-rate houses.—Apply to Messrs. MORRIS and SON, Architects, Poplar]

TO BE LET, SEMI-DETACHED VILLAS in immediate neighbourhood of Victoria New Docks, and in parish of Plaistow. Each house contains two parlours and breakfast-room, three bed-rooms, kitchen, scullery, pantries, and W.C. They are completely fitted up with every convenience, coppers, water, stoves, and bells. They are partially finished and varnished, and all are papered with newest patterns. They are ready for immediate occupation, and, in consequence of the failure of the builder, they will be let for the low rent of 32l. per annum. Taxes are very moderate, and railroad and omnibus conveyance within easy distance.—Apply to Messrs. WM. G. and E HABERSHON, Architects, 38, Bloomsbury-square, London; at whose Office views and drawings may be seen.

TO BUILDERS.—Dalston.—TO BE LET, or SOLD, a GATEWAY HOUSE and PIECE of GROUND, behind, 79 feet by 80 feet. Coltages or Workshops could be built on the ground.—Apply to JOHN SCARD, Esq. Solicitor, 2, North-crescent, Bedford-square.

TO BE SOLD, or LET, on lease, terms of 90 years, a PIECE of GROUND, for building, 30 feet frontage, about 240 deep in the AMHERST-ROAD, HACKNEY DOWNS. The ground is made up back and front, and planted with shrubs and fruit trees, with boundary walls, drains, &c. Apply at Amherst House, Amherst road, Shakelwell, Stoke Newington.

WANTED, FREEHOLD LAND, to build on for a Public Institution, within ten miles of London; no objection to an old Mansion on the same. Full particulars required "Freehold Land," sent, and addressed to the Board of Guardians (St James's, Clerkenwell), to be sent to the Workhouse, Coppice-row, on or before TUESDAY morning, the 26th instant.—By order,
EDWARD SCARGILL, Clerk to the Guardians.

FREEHOLD GROUND for Building on.—TO BE LET, upon BUILDING LEASES, PLOTS of GROUND, in that healthy locality, Holloway, two or three minutes walk from the Holloway-road, with omnibuses every five or five minutes to all parts of London. Situate in St John's-road, where houses let as fast as built. For particulars, apply to Mr. H. WITHERS, 9, Poultry. The leases direct from the freeholder. Money advanced.

TO BUILDERS

LEE, near BLACKHEATH.—FRONTAGES TO BE LET, for detached or semi-detached villas, on the Belmont Estate. This estate contains the finest sites for building purposes anywhere round London, and good villas are in great demand, on account of the situation being lofty, dry, well drained, and exceedingly healthy. Assistance will be afforded to responsible parties.—For particulars, apply to Messrs. J and C. W. TODD, Milner-street, Brompton, London, or Belmont Lee, Kent; or Messrs. NELSON and INNES, 6, Whitehall.

ALDERSHOTT CAMP.—PLOTS of LAND TO LET on Building Leases, commanding good frontages and admirable sites, facing the permanent barracks now erecting and near the Queen's pavilion.—For particulars apply to Mr. THOMAS WHITE, Jun. near the Admiral's Head, or H. Jel, and opposite the permanent barracks, Aldershott, Hants.

GROUND TO BE LET in the vicinity of Whitechapel, suitable for a Builder or a Manufactory, containing an area of 18,000 superficial feet, with some Shells erected thereon.—For particulars, apply at J. J. Hickmott's Sawmills, Church-street, Mile-end New-town.

WESTON-SUPER-MARE, SOMERSET

THE WEST COTTAGE ESTATE.—FREEHOLD LAND for the ERECTION of 100 HOUSES, in the centre of the town and overlooking the sea. TO BE SOLD, in one or more lots, on very reasonable terms.—Further particulars of B. G. PHILLIPS, Weston-super-Mare.

FACTORIES, GRANARIES, &c.—GROUND TO BE LET, suitable for the ERECTION of FACTORIES, with extensive wharf frontages on a Canal about three miles from London.—Inquire of Mr. ASHPITEL, 3, Crown-court, Old Broad-street, City.

TO LIME and STONE MERCHANTS.—TO BE LET, at a moderate rent, the CHANCELLOR'S WHARF, Queen-street, Hammersmith, near the Suspension Bridge, with dwelling-house, stable, and sheds.—Apply on the Premises.

TO STONEMASONS, IRONMONGERS, and OTHERS.—TO BE SOLD, several six-roomed CARCASSES, in a good situation, Ronford, Essex, ready to turn in, and the houses let close up to it. The whole or part of the materials may be taken in stone work or ironmongery, or any other kind of building materials.—Apply on the property, to BAUGHAN and MILLS, top of Carlton road, Kentish-town

TO PLUMBERS, GLAZIERS, PAINTERS, GAS-FITTERS, &c.—TO BE DISPOSED OF, with immediate possession, a very old-established BUSINESS in the above trades.—Apply to MR. JOS. COOPER, Ironmonger, High-street, King's Lynn

TO PLUMBERS, PAINTERS, AND GLAZIERS

TO BE SOLD, a first-rate BUSINESS, in a market-town, situated in the county of Suffolk. The premises comprise a convenient and comfortable dwelling-house with shop, workshops, stables, pig-house, yard and garden, and every convenience for carrying on the business established upwards of sixty years by the present occupier's father, as the reason of parties wishing to dispose of the same can be testified. The rents are moderate. For full particulars, inquire of Mr. C. HARRIS, 38, Guildford-street, Russell-square. Personal application between five and seven in the afternoon

TO ENGINEERS.—TO BE DISPOSED OF, by direction of the executors, a very compact BUSINESS in London, which has been established many years. The premises are centrally situate, and conveniently arranged for the business. The principal tools are nearly new, by Smith, Beacock, Tannett, of Leeds, and include a 12-inch self-acting slide-lathe, planing machine, and drilling machine; there are also three other lathes, high pressure steam-cocks and boiler, smiths' forge and tools, screw cutches, vices, and tools. About 1l. will be required, and to any active young man desirous of starting in business, a very eligible opportunity is presented.—For further particulars, apply to Messrs. FULLER and HORSEY, Billiter-street, City.

TO BUILDERS, PAINTERS, &c.—ALTERATIONS and additional WORKS to be EXECUTED at the village opposite Barnes Church, Barnes, for GEO. GREENHILL, Esq.—Drawings and specifications to be seen on the Premises on 25th, 26th, 27th, and 28th of FEBRUARY inst. TENDERS to be sent to the above address, on MONDAY, the 3rd of MARCH, 1856.—G. GORDON STANHAM, Architect, St Alban's Cottage, North-end, Hammersmith.

ARCHITECTURAL ASSOCIATION, 9, LYONS-INN-HALL, STRAND.—The next Ordinary Meeting will be held MARCH 7th, when Mr. BAILEY will resume his paper on "Cemeteries."

The Class of Design will meet March 14th; subject for sketch, "A Monument to a Musical Composer."

T. W. GOODMAN, } Honorary
J. A. BUNKER, } Secretaries.

SCHOOL of ART and TRAINING SCHOOL, MARLBOROUGH HOUSE, Pall-mall.—The Spring Session will commence on the 3rd of MARCH, and terminate on the 18th of JULY. Hours of study—Morning, Ten to Three, Evening, Seven to Nine, daily, except Saturdays. Fees for Morning and Evening, 4*l.*; for Evening, 2*l.* per session. The School for Female Students not in training, is at 37, Gower-street, Bedford-square.—For prospectus's, apply at the Head Master's office, Marlborough House.

BOARD of TRADE DEPARTMENT of SCIENCE and ART.—INSTRUCTION in ART.—TRAINING SCHOOL, MARLBOROUGH HOUSE, PALL-MALL, LONDON.

Art-Superintendent—RICHARD REDGRAVE, Esq. R.A.
Head-Master—R. BURCHETT, Esq.

The Courses of Instruction pursued in the School have for their object the systematic training of teachers, male and female, in the practice of art and in the knowledge of its scientific principles, with the view of qualifying them to impart to others a careful Art-education, to develope its relation to the requirements of trade and manufacture, and its application to the common uses of life. Special courses are arranged in order to qualify Schoolmasters of Parochial and other Schools to teach Elementary Drawing as a part of General Education concurrently with Writing.

The Instruction comprehends the following subjects:—Free-hand, Architectural, and Mechanical Drawing, Practical Geometry and Perspective, Painting in Oil, Tempera and Water Colours, Modelling, Moulding, and Casting, Etching, Wood-engraving, Painting, and Modelling include Architectural and other Ornament, Flowers, objects of Still life, &c., the Figure from the Antique and the Life, and the study of Anatomy as applicable to Art. Also, Classes for instruction in the technical processes of Dying and Enamel Painting, Drawing and Engraving on Wood, and Lithography in Chalk and Colour. The two last classes for female students only.

Hours of Study—Morning, TEN to THREE; Evening, SEVEN to NINE, daily, except Saturdays. Fees 4*l.* per session, or part of the session. For Evening Classes only, 2*l.* per session.

The Class for Practical Geometry and Perspective, or that for Moulding and Casting, may be attended separately on payment of a fee of 1*l.* per session.

Students have full access to the valuable collections of the museum and library, either for consultation or copying, as well as to all the public lectures of the Department.

The school for female students not in training, is at 37, Gower-street, Bedford-square. Superintendent, Mrs. Mylan. Fees per session,—Advanced Class, 2*l.* and 4*l.*; Elementary Class, 1*l.*; Evening Class, 10*s.*

Other information may be obtained on application at the Office of the Head Master, Marlborough House, Pall-mall, London.

ART UNION OF LONDON (by Royal Charter). Prizeholders select for themselves from the Public Exhibitions. Every subscriber of One Guinea will have besides the chance of a Prize, an impression of a plate of Harvest in the Highlands, engraved by J. T. Willmore, A.R.A. from the important and well-known Picture by Sir E. Landseer, R.A. and by Augustus Callcott, R.A. The Prints are now ready for delivery.

GEORGE GODWIN, } Honorary
LEWIS POCOCK, } Secretaries.

LECTURES to WORKING MEN, being the second for these courses for the present session, at the Museum of Practical Geology, Jermyn-street. Mr. Lyon on the First Principles of Chemistry, by Dr. HOFMAN, F.R.S. to be commenced on WEDNESDAY, 5th MARCH, at 8 o'clock p.m. Tickets may be obtained at the Museum, on MONDAY, the 3rd, from 7 to 8 and from 11 to 5 o'clock, upon payment of a registration fee of 6*d.* for the whole course.

TRENHAM REEKS, Registrar.

COMPETITIONS.

TO ARCHITECTS, SURVEYORS, AND OTHERS.

PLANS, DESIGNS, and DRAWINGS are requested for the ERECTION of TWO CEMETERY CHAPELS, under one roof, together with a Lodge and Entrance-Gates, for the Grantham Burial-Ground, containing six acres of land, to include ground-plans and elevations, and to be accompanied by approximate estimates of the expense. The buildings to be faced with Ancaster stone, and the roofs to be of Welsh slate. A field stone. The whole expense (including fittings, &c. of chapels) not to exceed the sum of 1,500*l.* 10*l.* is offered for the plan of the chapels and buildings considered to be the best; and the author shall also contract for the works, and 5 per cent. for the superintendence. The whole of the plans, &c. to be sent to me, sealed and endorsed, but without any name or distinguishing mark, on or before SATURDAY, the 1st day of MARCH next, inclosing a sealed letter in each case from the person forwarding it.

By order of the Burial Board,
ROBERT HENRY JOHNSTON, Clerk.

Grantham, Feb. 5, 1856

LIVERPOOL FREE PUBLIC LIBRARY and MUSEUM.—To ARCHITECTS.—The Council of the Borough of Liverpool are about to ERECT a BUILDING for the purpose of the FREE PUBLIC LIBRARY and the DERBY MUSEUM, and offer a premium of One Hundred and Fifty Guineas for the best Designs, and One Hundred Guineas for the second. The Designs are to be sent in on or before SATURDAY, MAY 31. Copies of the printed conditions and instructions to Architects, competing; and lithographed plans and sections of the site, may be had on application to Mr. J. STUART DALTON, Librarian, Free Public Library, Duke-street, Liverpool.

TO ARCHITECTS, &c. — PLANS for a NEW WORKHOUSE for BOLTON UNION.—The Guardians of the Poor of the Bolton Union are desirous of obtaining PLANS, SECTIONS, and WORKING DRAWINGS for the ERECTION of a WORKHOUSE, to accommodate 1,000 inmates, the cost of the buildings not to exceed 18*l.* per head. A premium of 50*l.* will be awarded for the best, and 30*l.* for the second best plan, but the Board are will not be responsible for any payment for unsuccessful designs. The plans of the two successful competitors to be the property of the Guardians, who do not pledge themselves to employ either of the successful competitors in carrying out the proposed works. The designs must be sent in under seal, without name, and with a private mark or motto thereon, accompanied by a letter under cover, and sealed, containing a corresponding mark or motto, and the designer's name and address, to the Clerk, on or before MONDAY, the 7th APRIL, 1856.

JOHN WOODHOUSE, Clerk to the Guardians.
Union-office, Acresfield, Bolton, February 15, 1856.

GRANTHAM BURIAL BOARD.—EXTENSION of TIME for PLANS, &c.—The period for sending in Plans for Chapels, Lodge, and Entrance Gates, is EXTENDED to SATURDAY, 22nd MARCH. Plans are also requested for PLANTING the GROUND and LAYING OUT the ROADS and WALKS therein, two-thirds as consecrated, one-third unconsecrated, to be, if by the same time, for which an additional premium of 5*l.* is offered. The ground is an oblong square of 220 yards by 132 yards. Entrance west. By order of the Board,
ROBT. HY. JOHNSTON, Clerk.

Grantham, February 20th, 1856.

TO ARCHITECTS AND SURVEYORS.

THE COMMITTEE for BUILDING NEW NATIONAL SCHOOLS at LUTON, Beds, are desirous of receiving DESIGNS in COMPETITION for the ERECTION of such SCHOOLS. A plan of the site, with further particulars, may be had on application, by letter only, enclosing 6*s.* in postage stamps, to Mr. D. B. STALKER, National Schoolmaster, Luton.

CONTRACTS.

BURLEY-IN-WHARFEDALE (Yorkshire) SEWERAGE WORKS.—The Local Board of Health for the district of Burley-in-Wharfedale hereby give notice, that they are prepared to receive TENDERS from competent persons for MAKING and FINISHING certain SEWERS, DRAINS, MANHOLES, GULLIES, and other WORKS required for the sewerage and drainage of their district. Duplicate copies of the plans, sections, detailed drawings, and specification may be seen at Burley, on application to the undersigned: also at the Offices of Mr. J. MACKLEBOROUGH, Civil Engineer, 24, Queensgate, Bradford, from whom printed forms of tender, and any further information may be obtained. Tenders, properly sealed and endorsed, must be delivered to the undersigned, on or before FRIDAY, the 7th day of MARCH next. The Local Board do not bind themselves to accept the lowest or any Tender.—By order,
EDWARD BREMFITT, Clerk to the Board.
Burley-in-Wharfedale, near Otley, 14th February, 1856.

KENSWORTH CHURCH. — Builders desirous of TENDERING for REPAIRS at the PARISH CHURCH of KENSWORTH, in the County of Hertford, near Dunstable, are requested to send in their Tenders, on or before MONDAY, the 10th MARCH, 1856, addressed to the Churchwardens, at Kensworth. The drawings and specification may be seen on application at Mr. ROUMIEUS Office, 10, Lancaster-place, Strand, London; or at the Churchwardens', Kensworth.

TUNSTALL LOCAL BOARD of HEALTH.—To BUILDERS.—CONTRACT for ALTERATIONS of TOWN-HALL.—The Tunstall Local Board of Health are desirous of receiving TENDERS for the necessary WORKS required in the Alterations and Improvement of the Town-hall. Drawings and specifications may be inspected at the Office of the Local Board, Amicable-street, Tunstall, from MONDAY, the 3rd, to SATURDAY, the 8th of MARCH; and further particulars may be obtained, on application to Mr. G. T. ROBINSON, Architect, 23 Upper Parade, Leamington.—Tenders to be delivered to me sealed and endorsed, on or before TUESDAY, the 11th of MARCH next—By order,
Tunstall, 20th February, 1856. J. LOWNDES, Clerk.

CONTRACTS.

ORDNANCE CONTRACT.—To BUILDERS and CONTRACTORS.—Sealed TENDERS will be received by the Director-General of Contracts, War Department, Pall-mall, London, until TWELVE o'clock on MONDAY, the 10th MARCH next, from persons willing to enter into Contracts for the ERECTION of a LAND TRANSPORT ESTABLISHMENT at the Camp, Aldershot. Plans may be seen, and specifications and forms of Tender obtained on application to Mr. BAKER, Clerk of Works, Royal Engineer Office, Camp, Aldershot, on and after MONDAY next, the 25th inst. The Tenders to be endorsed, "Tender for Land Transport Establishment, Aldershot." The War Department reserves the right of rejecting the whole or any of the Tenders.

War Department, Aldershot Camp, 8th February, 1856.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London District hereby gives notice, that sealed TENDERS, addressed to the Inspector-General of Contracts, will be received at the War Department, Pall-mall, on or before the 26th MARCH next, for the REPAIRS of FIRE-ENGINES, BUCKETS, &c., and for executing the WORKS and REPAIRS of the Royal Engineer Department in the London District, viz.: LONE ON, WINDSOR, CROYDON and CARSHALTON, HOUNSLOW and HAMPTON-COURT; for a period of three years, from the 1st APRIL, 1856, to the 31st MARCH, 1859. Printed schedules and forms of TENDER may be obtained at the Royal Engineers' Office, 11, James street, Pimlico, between the hours of TEN and THREE o'clock, from the 1st to the 14th MARCH inclusive. The War Department reserves to itself the right of rejecting the whole or any of the Tenders.

Royal Engineers' Office, London District,
February 27, 1856.

TO BUILDERS AND OTHERS.

THE JOINT BURIAL BOARD for the TOWNSHIP and PARISH of FOLKESTONE, in the county of Kent, are desirous of CONTRACTING for BUILDING and FINISHING, at the Cemetery, on the Cheriton-road, TWO CHAPELS, a Porter's Lodge and Apartments, and the Boundary Wall, and for preparing and laying the Entrance gates, &c. Persons willing to Contract, may see the plans and specifications at the Office of JOSEPH WILKINSON KIRK, Esq. Architect to the Board, Bouverie-square, Folkestone, between the hours of TEN and FOUR, on any day after the 1st instant. Sealed Tenders (marked "Tender for Buildings at Folkestone Cemetery") for executing the whole or any of the works, are to be left at my Offices in Church-street, Folkestone, not later than FOUR o'clock in the afternoon of TUESDAY, the 11th day of MARCH next. It is stipulated that it shall not be incumbent on the Board to accept the lowest or any Tender. By order of the Board,
Folkestone, 12th February, 1856. RICHARD HART, Clerk.

THE MARCH LOCAL BOARD of Health are prepared to receive TENDERS from competent persons willing to EXECUTE any of the WORKS enumerated in the following CONTRACTS for the Drainage and Water Supply of the District:—

CONTRACT A.—Sewers and Drainage Works.
CONTRACT B.—Well-sinking, Brick Tower, and Engine-House.
CONTRACT C.—A Steam-Engine, Wrought-iron Tank, Cast-iron Pipes, Pipe-laying, and Sundry Iron-work.

The plans and specifications may be inspected at the Office of the said Local Board in MARCH. Duplicate copies may be seen, and printed forms of Tender and further information may be obtained, on application at the Office of Mr. R. REYNOLDS BEWLEY, Civil Engineer and Architect, 3, Emmanuel-street, Cambridge. Sealed Tenders, properly endorsed, are to be delivered at the Office of the said Local Board, not later than SATURDAY, the 8th day of MARCH, 1856. The Local Board do not bind themselves to accept the lowest or any of the Tenders. By order,
JOSEPH T. ELLIOTT, Clerk to the Local Board.

March, Isle of Ely, February 11, 1856.

BURSLEM LOCAL BOARD of HEALTH. CONTRACT for FURNITURE and FITTINGS.—The Burslem Local Board of Health are desirous of receiving TENDERS for the SUPPLY of the necessary FURNITURE and FITTINGS for the New Town-hall. Drawings and specifications may be inspected at the Offices of Mr. G. T. ROBINSON, Arch. &c., 23, Upper Parade, Leamington, from MONDAY, the 3rd, to SATURDAY, the 8th MARCH; and at the Public Offices, Moorland-road, Burslem, from MONDAY, the 10th, to SATURDAY, the 15th MARCH.—Tenders to be delivered to me, sealed and endorsed, on or before TUESDAY, the 18th MARCH next.

By order, J. LOWNDES, Clerk.
Public Offices, Moorland-road, Burslem, 20th Feb. 1856.

TENDERS for BRICKS.—The Directors of the Commercial Gas Company will meet on FRIDAY, the 7th MARCH, at TWELVE o'clock, to receive TENDERS for 100,000 best common BRICKS, to be delivered on the Company's works Stepney, as directed by the Company's engineers. A sample of the Bricks to be seen with the Tenders. The Directors do not bind themselves to accept the lowest nor any Tender.—By order of the Board,
GEO. JAQUES, Secretary.

CONTRACT for the SUPPLY of BUILDING MATERIALS for DOVECOT PRISONS.—Persons desirous of TENDERING for the SUPPLY of TIMBER, Deals, Slates, Lime, Sand, Bricks, Lead, Oils, Wrought and Cast Iron, Ironmongery, Gas and Water Pipes, White Lead, Oils, &c. for twelve months from the 1st of APRIL next to the 31st MARCH, 1857, for Pentonville, Millbank, Brixton, Portland, Portsmouth, Dartmoor, Chatham, and Parkhurst Prisons, and Burlington House, Pall-mall, are requested to forward the same, addressed, "Directors of Convict Prisons, 9, Parliament-street, London," on or before MONDAY, the 10th MARCH, 1856, till SIX o'clock p.m. Forms of Tender may be had on application at the several Prisons; or at the Office of the Directors, 45, Parliament-street, London.

45, Parliament-street, 18th February, 1856.

[For remainder of Contracts see next page.

CONTRACTS.

WILTON LOCAL BOARD of HEALTH. To STONEWARE PIPE MANUFACTURERS and OTHERS.—The Local Board are prepared to receive TENDERS for the supply of SALT GLAZED STONEWARE PIPES for the sewers of the district of the said Board, under the provisions of the Public Health Act, 1848, and of the Orders made thereunder. The Pipes required are to be of the best quality, and of the following sizes, viz.:—About 2400 lineal feet of 18-inch pipes; about 2000 lineal feet of 15-inch pipes; about 1000 lineal feet of 12-inch pipes; about 1000 lineal feet of 9-inch pipes; about 1000 lineal feet of 6-inch pipes; and about 1000 lineal feet of 4-inch pipes. The Pipes are to be of the description known as "Jennings's Patent," or as well as others of the best quality. Specifications and forms of Tenders may be had on application at the Surveyor's Office, Wilton, where about 2400 lineal feet of 18-inch pipes and further particulars will be given on application. Tenders, endorsed "Tender for Stoneware Pipes," and addressed to the Chairman of the Board, to be sent in to the Clerk on or before MONDAY, the 10th MARCH next, by TEN o'clock a.m. The Board do not bind themselves to accept the lowest Tender.

By order of the Board,

THOMAS THRING, Clerk.

Wilton, near Salisbury, Feb. 23, 1856.

BOROUGH of SALFORD.—NEW CEMETERY.—WORKS and WORKS.—The Burial Board Committee are prepared to receive TENDERS for the following WORKS, viz.:—THREE MORTUARY CHAPELS, LODGE, ENTRANCE GATES, and the new Cemetery Roads, and generally the Formation of the Cemetery. Plans, Specifications, and Forms of Tender may be had on MONDAY, the 3rd day of MARCH, at the Office of the Works Committee, Town-hall, Salford, between the hours of Ten and Four o'clock, and not later than TWELVE o'clock at noon on SATURDAY, the 15th day of MARCH, at which time the Tenders are to be delivered at the Office of the Works Committee, Town-hall, Salford, addressed to the Chairman of the Committee, and endorsed "Tender for Cemetery Works." The Committee do not bind themselves to accept the lowest or any Tender.

WILLIAM HILL, Chairman of Committee.

WILLIAM GIBSON, Town Clerk.

Town-hall, Salford, February 23, 1856.

THE VESTRY of the Parish of ST. MARY, LAMBETH.—To CONTRACTORS for SEWERS, BUILDERS, and others.—Notice is hereby given, that the Committee appointed by the Vestry will meet at the VESTRY HALL, Kennington-lane, on MONDAY, the 3rd day of MARCH, 1856, at SEVEN of the clock in the Evening, to receive TENDERS for the SUPPLY of MATERIALS and the EXECUTION of the following WORKS of IMPROVEMENT, viz.:—

Such Tenders must be sealed, directed to the Clerk, endorsed "Tender for Sewer Work," and delivered before ONE o'clock in the afternoon of the said day. No Tender will be received after the time specified. Each Tender must be accompanied by the name and address of two responsible persons willing to enter into a bond with the successful Tenderer for the due performance of the contract. The expense of the bond to be borne by the Contractor; that of the Contract by the Vestry; and the Vestry will not be bound to accept the lowest Tender.

By order of the Committee,

THOMAS RIPLEY, Clerk to the Vestry.

Vestry Hall, Kennington-lane, Feb. 25, 1856.

ST. MARYLEBONE.—CONTRACTS for GRAVEL and HOG HUMP CEMENT, SAND, THAMES BALLAST, and BASS BROOMS.—Notice is hereby given, that the Vestry of the Parish of St. Marylebone will meet at the Board-room of the Parish Offices, Marylebone, on THURSDAY, the 6th day of MARCH, 1856, at ELEVEN o'clock in the forenoon, to receive TENDERS for the SUPPLY of GRAVEL and HOG HUMP CEMENT, for the repair of the roads, and for SAND, THAMES BALLAST, and BASS BROOMS, for the use of the Parish, for the year ending MARCH, 1857. Forms of Tender may be had at the Board-room of the Parish Offices, Marylebone, and Plans of the Yards, from which the materials are to be delivered, may be seen at the Yards, on application to the Surveyor, Mr. ROBERT SCALE, at his daily attendance at the Offices, from TWELVE till ONE o'clock. No Tender will be received after the hour above mentioned. Each Tender must be delivered at the parish Stoneyard, or on the streets, as may be required.—Further particulars may be known

ST. PANCRAS IRONWORKS,

OLD ST. PANCRAS-ROAD; OPPOSITE THE OLD CHURCH, LONDON.

TO ARCHITECTS, ENGINEERS, BUILDERS, AND CONTRACTORS.

HER MAJESTY'S
ROYAL LETTERS PATENT.

☞ ADDRESS—THE MANAGER OF ST. PANCRAS IRON WORKS, OLD ST. PANCRAS-ROAD, LONDON.

TYERMAN'S PATENT HOOP-IRON BOND FOR BUILDING PURPOSES.

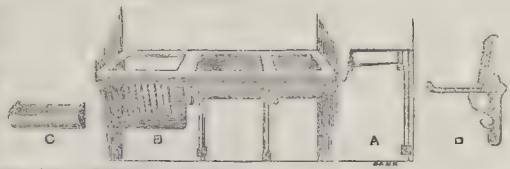
TARIFF OF PRICES
Beyond the current Price of Hoop-iron.

The undermentioned Gauges are kept in stock; but any Gauge or width will be supplied within a few days, at a small advance on the following prices:—

Gauge.	In. wide.	Per 1,000 ft.
No. 16 ..	1¼ ..	7s. 0d.
15 ..	1½ ..	7s. 6d.
15 ..	1¾ ..	8s. 0d.
15 ..	.. ..	8s. 6d.
16 ..	.. ..	9s. 6d.

Plan and Elevation of Bond, showing Position and Form of the Claws.

THE PATENT BOND is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 1¼ inches on both sides alternately, and turning one side of each notch in succession in contrary directions on the reverse sides of the iron, thus forming reversed claws, which are so bent, that a direct end grain of the iron is presented longitudinally, offering most powerful and effectual resistance, and which become, when built into the brickwork, embedded in the structure, preventing the possibility of longitudinal escape, and a complete and permanent bonding together of the whole building is thereby obtained.



Patentee—FREDERICK TYERMAN, Architect, 44, Weymouth-street.

Sole Manufacturers—THOMAS PERRY and SONS, Government Contractors, Bilston.
London Depôt—463, OXFORD-STREET.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

PARIS EXHIBITION AWARD TO
COTTAM and HALLEN, of Winsley-street,

The original Inventors of the PATENT ENAMELLED MANGER, RACK, and WATER-TROUGH AS ONE FIXTURE, and to which they have made important additions, the main features of the same being explained in the following description and Engraving.

A represents the Patent Halter-guide and Collar-rein, the ball of which is taken to the back of the manger-works with freedom and ease up or down the guide-bar, and is noiseless in its operation, as also a sure prevents five against the most restive horse being cast in the stall.

B. The Patent Portable Seed-box can be instantly detached from the rack without disturbing the hay. The saving of the seed in a clean and useful state, either for agricultural purposes, for mixing with the food in the manger, is alone sufficient to claim general notice.

C. The Seed box detached, made of galvanized sheet iron, light and durable.

D. The Patent Saddle and Harness Bracket combined, can be used with great advantage in harness-rooms, where space is an object, as the long portion of the bracket can be turned up out of the way when not in use.

COTTAM'S MANGERS are constructed in the best possible manner, both as to form and utility; are cleanly in appearance, durable, and impervious to infection. Manufactured plain, galvanized, and enamelled.

IMPROVED SURFACE-DRAIN, with safety covers; Sanitary Traps, Stable Pumps, Loose Box Fittings, Gutta-percha Pre-serving Saddle and Harness Brackets, and every Article in Stable Furniture in stock.

An extensive Assortment of Patterns for both Plain and Ornamental Castings, and every description of Wrought and Cast-iron Work for building and other purposes.

Agricultural and Horticultural Implements, Iron Gates, both plain and ornamental; Hurdles, Strain Fencing, &c.

The New Illustrated Catalogue for 1856 gratis on application. Estimates and Designs.

BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Rivets, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.
Castings Warehouse removed from 81 to 66, Upper Thames-street.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.
THIS IS THE ORIGINAL PATENT

for important improvements in stable-fittings, hay-box, manger, and water-trough, as one fixture, including a method surpassing all others for conveying the collar rings and halter-weights to the back of the fitting, to prevent the horse being cast in the stall. The Hay-Box effects a considerable saving of hay and seeds, and the front roller is a valuable preventive against accident and crib biting. Stable-fittings of every description, plain, enamelled, or galvanized. Also the New Patent Loose Box Fittings, Surface Gutters with moveable cover-plates, Stable Posts, Ramps, Sills, and all kinds of Stable Furniture in Stock. Iron Gates, Tomb Railings, Hurdles, Fencing, &c.
JAMES BARTON, IRON FOUNDER, &c. 370, OXFORD-STREET, London.

The BEST CURE for SMOKY CHIMNEY,—patronised by her Most Gracious Majesty. KITE'S PATENT VENTILATING and SMOKE-CURING CHIMNEY CAPS, as in Buckingham Palace, in use also on St. James's Palace, Claremont, Windsor Castle, Government Buildings, &c. Wrought iron, 32s.; galvanized ditto, 36s.; cast iron, 32s. each.
The merits of this invention are proved by practical experiments, daily, at the Royal Polytechnic the Crystal Palace, and Manufactory. Illustrated catalogues sent on receipt of two postage stamps.
Address, JAMES BARTON, 370, Oxford-street, London.

TO BUILDERS

LATHS for SALE.—100 loads of the best PETERSBURG LATHS for sale. Price 33s. cash.—Inquire of JOHN NEWTON, Hertford-road, Kingsland-basin.

SLATE CISTERNS, SINKS, and every description of SLAB WORK, in Slate, Roofing Slates, or Covering. T. B. HANNAFORD is not only in a position to execute orders to any amount in the above, at extremely low prices, but guarantees a first-class material in all respects, similar to the slate he has used in fitting up and covering the principal mercantile and Governmental buildings in the City. Any priced list sent on application.—TREVALGA WHARF, Ratcliff-cross.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

PARIS EXHIBITION. — ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of loo-tables, chiffoniers, consoles, &c.; baths, baptistries, altar-tablets, pilasters, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

TO CONTRACTORS, BUILDERS, &c.—EIGHTY AXE-DRESSED GRANITE BLOCKS TO BE SOLD a bargain. They are worked all round, and the beds made and taken to a height. The lengths are 3 feet 3 inches and 2 feet 7 inches, 1 foot 11 inches wide and 1 foot 9 inches high. To be seen at the South Devon Wharf, Lower East Smithfield.—Price and particulars can be had by applying, by letter only, to B. R. PENTON, Post-office, Lupus-street, Pimlico.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations,
FROM 9d. PER SQUARE YARD.
Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.
Apply to JOHN PILKINGTON, Poloneeau and Limmer Asphalte Office, Monument-chambers, 14, Fish-street-hill, London.
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

NOTICE TO ROAD CONTRACTORS, NURSERYMEN, AND OTHERS.
W. and J. STUDDS, Sole Proprietors of the WEST DRAYTON GRAVEL PITS, lately removed from No. 21 Wharf, Harrow-road, to 9, North Wharf-road, Paddington, have now on sale good Garden and Screened Gravel. For terms, &c. apply at the Wharf.
Contractors supplied to any extent.

By her Majesty's — Royal Letters Patent

THE ROYAL PATENT DECORATIVE GLASS COMPANY, 21, Castle-street, Southwark-bridge-road. NOTICE of REMOVAL.—REMOVED to No. 12a, CUMBERLAND-MARKET, REGENT'S-PARK, where machinery has been erected to carry on the manufacture of this most important branch of ornamental glass.
Orders can now be executed, with the great st cheapness and despatch, by EDWARD BAILLIE and CO. 12a, Cumberland-market, and 118, Wardour-street, Soho (successors to M. Toussaint, Cartisser, and Co.)— Specimens of every description of Church Memorial Windows and Decorations. Glass Painting, Staining, and Embossing, may be seen as above. Designs and estimates upon application.—February 26, 1856.

GLASS.—To Glass-Cutters, Benders, Plumbers, and Mechanical Men in general.—A genuine BUSINESS TO BE DISPOSED OF: the present proprietor parting with it in consequence of a death. May be easily learned by persons unacquainted with it, being under perfect management, and requiring but small capital.—For further particulars, apply to J. BOWDEN, 33, Lamb's Conduit-street, Foundling.

PATENT and BRITISH PLATE GLASS.—JAMES HETLEY and CO beg to inform Architects, Builders, and the Trade generally, that their new Tariff of Prices for the above will be sent on application; they will also on receipt of particulars, furnish estimates for any description of Glass now manufactured.—Patent Plate, Sheet, Crown, and Ornamental Window Glass Warehouse, 35, Soho-square, London.

SUPERIOR BRITISH PLATE-GLASS AT VERY LOW RATES.
THE UNION PLATE-GLASS COMPANY having recently completed very considerable improvements and additions to their works, take the opportunity of informing their friends that they will now be able to supply orders without delay; and respectfully invite the attention of the trade generally to the low rates at which their now much-esteemed manufacture is sold.
Lists of prices may be obtained on application at
The Works, Pocket Nook, St. Helen's, Lancashire.
The Warehouse, 99, Hatton-garden, London.
" 48, Piccadilly, Manchester.
Messrs. C. and J. Mulloch, 30, Turner's-court, Glasgow.
" John Dix and Co. Bath-street, Bristol
" H. Bilsborrow and Son, Cork-hill, Dublin.
ROUGH PLATE-GLASS from ¼ to ¾ in thick, suitable for the windows and roofs of mills, mechanics' shops, market halls, railway stations, &c.
Beautiful and highly-finished POLISHED PLATE-GLASS, for shop-fronts and all superior glazing purposes, and for silvering.
Superior silvered Plate-glass Mirrors of all sizes.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications and estimates and lists of prices to be made at their warehouse, 315, OXFORD-STREET.

The new business of the last eight months exceeds 5,000l. in Annual Premiums.
FIRE.
The Guarantee Fund is being increased to Half-a-Million.
The annual income, since last annual meeting, has increased beyond 5,000l. GEORGE CUMMING, Manager.
N.B.—Agents are still wanted for some vacant localities.

SIXTH BONUS.
UNION ASSURANCE SOCIETY.—(FIRE LIFE ANNUITIES).
Instituted in the reign of Queen Anne, A.D. 1714.
Cornhill, and 70, Baker-street, London.
Chairman—J. Remington Mills, esq.
Deputy-Chairman—Henry Aldwin Sharnes, esq.

James Bentley, esq.	John Paynter, esq.
Thomas Bodley, esq.	John Rogers, esq.
Daniell Britten, esq.	Henry Rutt, esq.
Nicholas Charrington, esq.	George Spencer Smith, esq.
S. Preston Child, esq.	Robert Bowman Solly, esq.
William Gilpin, esq.	W. Foster White, esq.
Thomas Mills, esq. M.P.	Samuel Wilson, esq. Ald.
John Morley, esq.	Spencer Wilson, esq.

The LIFE BONUS of the year 1855, of four-fifths of the profits of the LIFE DEPARTMENT, has been just declared, and (with the exception of a reserve of nearly 20,000l. to accumulate towards the next Bonus of 1863), is payable upon and with the sum insured, being at the rate of 10l. 10s. per cent. for the last seven years, on Policies effected in Great Britain upon the Profit System
THIS BONUS MAY BE APPLIED EITHER
By having the annual premium reduced for the next seven years, which will in many cases extinguish the same for that period;
Or by adding the amount to the sum insured;
Or the value thereof may be received immediately in money.
The Directors beg to state that, by a recent change in the regulations of this Society, the assured realize the advantages of MUTUAL OFFICES by sharing the entire profits less one-fifth as a small compensation for the necessary guarantee), and are free from the liability incurred by the members of such Societies.
The accumulated invested capital now amounts to upwards of ONE MILLION sterling.

CANAL BOATS.—TO BE SOLD, a pair of good strong BOATS, well adapted for coal or stone trade.—Apply to Mr. WALNE, Macclesfield-street, City-road Basin.

FERGUSSON'S
HISTORY OF ARCHITECTURE.

This day, with 850 Illustrations on Wood, 1,000 pp. 2 Vols. 8vo. 30s.

THE ILLUSTRATED HANDBOOK OF ARCHITECTURE.

Being a concise and popular account of the different styles of Architecture prevailing in all ages and countries.

By JAMES FERGUSSON, M.R.I.B.A.

Author of "Palaces of Nineveh and Persepolis Restored."

"We needed a manual which should give us a succinct account of all the principal buildings of the world; which should be intelligible to the general reader, and yet informing to the professional artist; which should be profusely illustrated with specimens of all the styles known to have existed; which should set free the great models locked up in splendid monographies, and condense the information displayed at length in the costly and cumbersome tomes of architectural libraries. We needed what the present volume purports to be, a 'Handbook' of architecture, and, when we find that it answers perfectly its intended purpose, we treat it as a valuable and welcome addition to our current literature."—*Times.*

"Mr. Fergusson's qualifications for writing a book such as that before us, are many and important. He has visited many countries, and he speaks with the weight of personal knowledge. With nothing approaching to eloquence, he succeeds in making his subject impressive and interesting to a high degree."—*Spectator.*

"By the help of this book every intelligent reader may not only amuse himself, but, without much cost of pains or study, very usefully extend the borders of his education. To most people the acquisition of the information it contains will be the conquest of a new province of knowledge to the mind. The whole book is a special narrative throwing a side light upon the history of civilization, and is so written as to combine, with the accuracy demanded by the professional reader, much of the lively skill required to fix the interest of men who read only to gratify their tastes and stretch their powers of enjoyment."—*Examiner.*

"Mr. Fergusson's book will remain a lasting monument of his genius, taste, and perseverance, and no lover or student of the art he has served so well can afford to dispense with its assistance. Owing to the nature of the subject, books that treat of architecture are generally large and costly in their production. Mr. Fergusson's object is to remedy, to some extent, these inconveniences, by condensing within the compass of two small volumes the essence of the information contained in the costly and ponderous works of the architectural library. The general reader, or the student of architecture, will find Mr. Fergusson's book an admirable guide to the knowledge of this noble art."—*Morning Post.*

"Fortunately, the task of supplying a long felt void has fallen upon one who has already shown himself no mere compiler, but a man of bold and original views.

"Among the illustrations occur a large series of plans of mediæval cathedrals, singularly well selected, and most of them, like those in the first volume, engraved upon a uniform scale of 100 feet to an inch—a precaution which augments immensely their comparative value to the architectural student."—*Saturday Review.*

"This is a very instructive work, and throws great light upon a vast and very important subject. Although anarchy prevails and has long prevailed in the practice of architecture in this and most other countries, yet the spirit of inquiry has set in respecting the true scope of the primitive art; and so copious and carefully arranged a store of information as these volumes yield upon the subject, will go far not only to satisfy general curiosity, but also to afford positive help to the earnest student. It is the best manual of the history of the art during the periods over which it extends with which we are acquainted."—*Daily News.*

"Seldom as works of this description realize expectation, this does so in an eminent degree. We have here, in two portable volumes, a truly rich manual of architecture. Illustrated works pertaining to this science are generally very large and proportionately expensive, so as to prevent most persons from enjoying them. Indeed, to use them for purposes of comparison in a small library or drawing-room, where the subject might be studied as a fine art, seems almost impossible, for who can find space to have two or more of these leviathans abroad at the same time? All these difficulties Mr. Fergusson has kindly removed for us. Every page affords some practical architectural subject, and plans and sections seem only introduced to make the pictorial and more intelligible."—*Athenæum.*

"A publication of no ordinary importance and interest. It fills up a void in our literature, which, with the hundreds of volumes we possess on that science, had never before been precisely attempted; and it fills it up with learning and with ability. The latter, Mr. Fergusson has amply manifested in his previous writings. The result is the present two volumes, with a magnificent apparatus of 850 woodcuts, comprising plans, elevations, sections, perspectives, and details."—*The Ecclesiologist.*

"Though not of imposing size, Mr. Fergusson's book has legitimate claims to be considered a great work. It is the result of long labour and original observation. It contains a copious notice of every well-marked style of architecture known to exist; and the descriptive matter is illustrated by 850 wood-engravings (most of them drawn to a scale), showing examples of the various styles described in the text. The work is complete as an outline history of the art. We cannot speak too highly of the clearness and accuracy of the wood-engravings. They go far of themselves to form an architectural library."—*Press.*

JOHN MURRAY, Albemarle-street.

Third Edition.
THE BUILDER'S FRIEND,
Price One Shilling,
Office of "The Builder," and of all Booksellers.

New Edition, in 8vo with Plate and Woodcuts, price 10s. 6d.

G. OWEN REES, M.D. &c.
*** In this work will be found a full account of all the Poisons, their Symptoms, Uses, and Effects.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW VOLUME OF DE LA RIVE'S WORK ON ELECTRICITY
Now ready, Vol. II. in 8vo. with Woodcuts, price 28s.
A TREATISE on ELECTRICITY, in Theory and Practice.
By A. DE LA RIVE, late Professor in the Academy of Geneva.
Vol. I. price 18s. may still be had.
"It is emphatically a treatise, containing both the theoretical and practical aspects of the science; and is so clearly written that even the tyro may make it his introduction to electricity, while the most accomplished electrician will find it an invaluable summary."—*Leader.*
"This will be a standard work on electricity when completed.
. . . To all who desire to have an acquaintance with the recent ideas and experiments of electricians, and with the theory and practice of it extremely generable, this is one of the most valuable as well as most readily accessible works they can consult."—*Builder.*
"From such a life we are entitled to expect noble results—from such a man we anticipate masterly works; and masterly indeed is the 'Treatise' now before us, which is expounded the whole of what European sea, and genius have discovered up to the present time in the vast and difficult science of electricity. It would be De la Rive's ambition to compress the work in two volumes; but although this second volume contains upwards of 900 compact pages, a third has been found necessary to complete his design. Nor will any one who cares two pins about the book regret this extension; for here we have a work which is perfect, and not because it is diffuse, but because he who knows his subject is extensive—not because he ill understands the art of exposition, but because he is a master of exposition and his matter is abundant. The pages are as full of matter as an egg is full of meat—they are not padded out with sawdust, stretched out digressions, or unnecessary details. . . . Altogether, we can name no work so eminently adapted to the wants of the student, and to the instruction of the amateur."—*Saturday Review.*
London: LONGMAN, BROWN, GREEN, and LONGMANS.

New Edition, in 4to. with 38 Plates and 349 Woodcuts, 27s.
A TREATISE on the STEAM-ENGINE, in its Application to Mines, Mills, Steam Navigation, and Railways. By the ARTISAN CLUB.
Edited by JOHN BOURNE, C.E.
Author of "A Treatise on the Screw Propeller," price 28s; and of a "Catechism of the Steam-Engine,"—of which a thoroughly revised Edition is nearly ready.
"In great merit of the present work is the vast quantity of information which it affords on the details of construction. In this respect it seems unrivalled. . . . It contains a vast store of invaluable fact."—*Civil Engineer and Architect's Journal.*
London: LONGMAN, BROWN, GREEN, and LONGMANS.

DR. WEST ON CHILDREN'S DISEASES.
The Third Edition, in 8vo. Volume, price 16s.
LECTURES on the DISEASES of INFANCY and CHILDHOOD.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE made by Boilers upon the lowest terms. Manufacturers and tenderers Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 15A, Fore street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

TO TIMBER MERCHANTS and OTHERS. The Proprietors of Lett's Wharf, Commercial-road, Lambeth, offer the most convenient Wharf for landing all sorts of Timber, &c. Also a Dock for Dry Storage, Docks, 40 and 16 ft. in Cranes, Sawpits for converting Timber, &c. Freights paid on delivery.—Apply to G. NOKES and Co. as above.

LETT'S WHARF PATENT SAWING, PLANING, and VENEER-CUTTING MILLS, Commercial-road, Lambeth.—The proprietors beg to announce to the trade that they have completed their extensive arrangements, and will be happy to execute all orders intrusted to their care with despatch and punctuality.
N.B. All goods sawn at these mills fetched and delivered free of charge.

The Builder.

VOL. XIV.—No. 682.

THE cemetery of the London Necropolis Company, situated on the line of the South-Western Railway, beyond Woking, will be the means of future great benefit to the metropolis. We have before this mentioned the establishment of the cemetery; but would further assist in making its advantages felt. First, however, a few words as to the present position of the all-important Burial Question.

Although changes in the practice of sepulture have been already made, such as will effect amelioration in public health, circumstances which, from time to time, come to our knowledge—viewed with reference to conclusions long since matured and published—show that improvement has yet to be promoted in the popular apprehension of this great question,—towards measures of a sanitary nature not yet in practical operation, and to realise the full social and moral bearings of the subject. We are not about to compare all the conclusions from Mr. Walker's long, serviceable, and unrewarded labours, or every page of the Report on the "Practice of Interment in Towns," by Mr. Chadwick, dated in 1843, with what Government has ventured to do, or to require. Our main object is rather to examine into the capabilities of the Necropolis Company, and of their cemetery,—though with reference to the most advanced opinions upon the question of burials—as to the necessities of London.

Few things appertaining to custom and habit, can be more difficult to regulate than the practice of interments,—at least in this country. Some of the most valuable suggestions and statistics before us, have been drawn from towns on the continent; and as to the provision of houses of reception for the dead, and in the prevention of extortionate charges—swelled by useless, if not objectionable forms of ceremonial—the English despotism of prejudice still withholds measures of sanitary and moral necessity, of which the value has long been seen in Frankfort, Munich, and other capitals. How much of the idea of "reverence for the dead"—supposed here to prevail, and there to be wanting—is purchased at a cost which makes any salutary influence impossible, little study of the subject is required to tell us; how much of life-destruction and moral degradation has been retained, our readers should sadly know.

All this, to the credit of individuals, and, indeed, of recent ministries, has been understood by them. Yet, slight allusion to matters fresh in recollection, would be required to show the difficulty which there is in imposing regulations. The Report above referred to, embodies the results of laborious researches into every branch of the question; and, with the aid of later documents, these conclusions should be obvious to every educated and observant mind,—namely, that the practice of burying in the close vicinity of dwellings is inevitably destructive to the sanitary welfare of the living; that—in all cemeteries—situation; character of soil, and its drainage; proportion of earth to each corpse interred; planting; and the provision of appropriate and beautiful works of nature and art, are each to be attended to; that the decomposition of corpses—though with the *minimum* of injurious exhalation—is to be promoted rather than checked; and that leaden coffins, family graves, brick graves, and "vaults," or *catacombs*, should be disused; that the retention of the body before interment, for a long period, is fraught with injury to health—especially in the single rooms or confined habitations which furnish the bulk of mortality—and in such cases, in addition, either occasions unnecessary and dangerous effects mentally upon survivors, or, more frequently, is also morally degrading and brutalising; that the customary ceremonial at funerals, and the extortion to which all classes are victims, make up a sum of expense which adds to or occasions many of the before-mentioned evils, and brings ruin upon widows and orphans; whilst, for the object of the verification of the fact of death—a thing shown by authenticated cases of suspended animation to be required, as well as for detection of causes of death in certain cases—public receptacles would generally present advantages. How far have these conclusions been at this day accepted, and practically carried out?

If you say that the pestiferous character of grave-yard exhalations is universally admitted,—and that we waste time by allusion to so trite a subject—we remind you that the other day, a dignitary of the church, seemingly disposed to throw difficulties in the way of the consecration of a cemetery, could express his belief that the neighbourhood of a grave-yard was rather beneficial than otherwise,—although, as long ago as the year of grace 1843 aforesaid, the shreds of argument as to the harmlessness of the effluvia had been scattered to the winds. If you believe that all else is now plain and admitted, certain further awkward facts present themselves.

The several Acts of Parliament that are in force, have not been passed without much of the "tinkering legislation" which has at last cried out within the walls of St. Stephen's itself, for reformation. Mr. T. Baker, of the Burials' Acts Office, in Old Palace-yard; and Mr. J. J. Scott, have each published a work, in which the Acts are "consolidated."* It is here seen that there are some important exceptions specified to the operation of the Acts. There are also some omissions which will have to be rectified this year.

The provisions in, or arising out of the Acts, which are most important to the community (independently of the clauses providing for the closure of old burial-grounds, and which take effect by Orders in Council), are the Home Office "Regulations," made in pursuance of the Act, "for conducting Interments in Burial-grounds provided under the Burial Acts 15 and 16 Vict. c. 85, and 16 and 17 Vict. c. 134;" and the "Instructions for Burial Boards in providing cemeteries, and making their Arrangements for Interments,"† approved by the Secretary of State.

Now, it will be recollected that these excited some animadversion; and we are perhaps not going too far to say that they were hailed as intolerable interference with the liberty of the subject. Yet they were and are rather behind the conclusions of experience. For, in defiance of the conclusions—or rather, in deference to popular prejudice—the "Regulations" recognise the practice of interring more than one body in a grave—as in the case of families. They allow of the use of vaults, provided "the corpse be enclosed in an air-tight metallic coffin;" though it had been in evidence in 1843, that such coffins could not be considered as necessarily "air-tight," having frequently to be *tapped* even before leaving the house where the death occurred.

Looking through the "Instructions," we find further inconsistencies, or deference to prejudice, therein, or shown to exist in the Acts. Cemeteries are not to be established where buildings are in progress or contemplated; and the law requires that a distance of 100 yards shall be kept from any existing dwelling-house, without there be the consent of the owner, lessee, and occupier. It is surely, then, an inconsistency to allow houses themselves to approach; or for any extra ground taken, to be let by the parochial board for building purposes, as is proposed in the case of the cemetery of St. Pancras. The "disposition to erect houses in the vicinity of ornamental cemeteries" prevails amongst those who have not made themselves acquainted with the evidence published, of the extraordinary distance to which the pollution of the ground may in certain cases be extended. Something more stringent would seem to be required than the mere *advice*, to leave "a space a few feet or yards in width, according to the size of the cemetery," between its "fence and the nearest graves." The truth is, that the sites of some of the cemeteries recently formed for metropolitan parishes, are so near to the suburbs as to be quite opposed to the spirit of the "Instructions." Again, with reference to family graves; whilst the "Instructions" say that "a fundamental principle of interments is, that no more than one body be buried in any grave at one time," and state that there are towns and districts even in England, where from "time immemorial" it has been "the custom never to re-open a grave which has been buried in;" whilst it is shown that the placing of coffins one over another, greatly prolongs the decomposition which is required; and whilst the "Instructions" also suggest that burial boards might dispose of *plots* of ground for families, with grave spaces to be used alternately, according with the system of the cemetery at Frankfort,—they feel compelled by the prejudices to which we have referred, to permit *exceptions* in favour of family vaults and graves. The Woking Company also are under no restriction in this particular, and allow several interments in a grave in the case of families, as well as the use of brick graves and vaults, and of other graves which, being of "extra depth," would seem to be likewise contrary to the best opinions. Again, the "Instructions," approved by the Secretary of State, say, that the use of monuments and flat stones covering the grave should be discouraged,—as tending to retard decay for nearly three times the period that would be requisite if the grave were covered with turf and planted: but they equally hesitate to impose any restrictions in that particular. The different proposals for removal and reception of the dead, are merely referred to in the manner of suggestion. Reception-houses were originally contemplated by the Woking Company: but an outcry was raised by the people of Lambeth; and, in deference to this, a clause stands in the Company's Act, forbidding them to retain any corpse at the London station during longer than twenty-four hours. The means which they can afford of carrying out what, under proper regulations, and with efficient structural contrivances, would be an important sanitary improvement, are therefore limited to the power allowed them of transferring bodies to Woking, and retaining them there—when desired by relatives—till the day of funeral; and this arrangement has been found to be preferred to the retention of the body, even by persons not residing in confined habitations.

The discrepancy of recognised principles and allowed practice is scarcely to be wondered at, when we regard the extraordinary nature of the case to which restrictions had to be applied. It is not only between *countries*, that customs in the rites of sepulture are at variance: there

* "The Laws relating to Burials in England and Wales, including 15 and 16 Vict. cap. 85; 16 and 17 Vict. cap. 134; 17 and 18 Vict. cap. 87; and 18 and 19 Vict. cap. 79 and cap. 128; with Notes, Forms, and Practical Instructions." By T. Baker, Barrister-at-Law. Maxwell.

"Burials Acts, Metropolitan and Provincial, 1852, 1853, and 1854; with the Incorporated Clauses from the Cemeteries' Clauses Act, 1847, &c. &c.; and explanatory analytical Abstract of the various provisions of the several Statutes. Fifth edition: to which are now added, the Burial Acts of 1855, 18 and 19 Vict. cap. 79, and 18 and 19 Vict. cap. 128; with an Introductory Abstract of their Provisions, and of the Alterations effected thereby in the existing Laws relating to Burials." By James J. Scott, Barrister-at-Law. Knight and Co.

† Printed for her Majesty's Stationery Office. 1854.

are singular differences between the several parts of the United Kingdom, and even between town and town. What would be "customary" in one place, would be but "maimed rites," or the height of impropriety, in other localities. Therefore, the moment that legislative or governmental restrictions are attempted, prejudices are raised, and on the most difficult of all subjects. The mode of transit by "the silent highway," or by canal, had advantages beyond what are available by railroad communication,—efficiently as it may be allowed, this means of conveyance is managed by the Necropolis Company. Plans for the different vessels and carriages were at one time got ready for the Board of Health: difficulties, however, presented themselves as to reaching one chosen site, arising from the crowded state of "the Pool:" and still more serious difficulties were perceived in the cost of property sufficient for embarking places at the river-side, and for the necessary street improvements adjacent,—which would have had to be paid for out of increased *rates*.

We may state as the result of careful inspection of the station at the Westminster-road, and of the cemetery itself, together with the arrangements observed at both places, that we discover nothing which does not present an improvement upon the system of the London suburban cemeteries, even greater than these were supposed to effect upon the older grave-yards. Every pauper grave is allowed to hold but a single corpse during the estimated period of decay; or, rather, no grave can be re-opened "except at the request of the friends of the deceased previously interred, for a space of ten years." The charges for the first four of the five or six classes of burials as conducted by the company, include the grave "in perpetuity."

At this juncture, that such advantages are available, might indeed be regarded as of singular importance, were the actual condition of London understood. In the chief suburban cemeteries, specially exempted from the operation of the Acts, the practice of "pit burial" continues: and practices—such as the keeping graves open—most injurious to public health, are maintained—as in the Victoria-park Cemetery—(or were so, quite recently),—though the sites are already, or will shortly be, surrounded by houses. At Abney-park, the unsuitable clay soil is said to crack, and emit vapours which are so offensive, that the letter-cutters on the grave-stones cannot work without precautions. It is therefore to be regretted, whilst the Acts were made not to impose discontinuance of burials "in any cemetery established under the authority of any Act of Parliament" (16 and 17 Vict. c. 134, s. 5),—the London cemeteries referred to being specially named in the schedule of the earlier Act (15 and 16 Vict.)—that no power of *regulating* these should have been reserved. The omission will, however, be rectified: though it is not at present desired to close such grounds, or to get the power of *preventing* any burial in them. Indeed, in the case of the Victoria-park cemetery, the greater part of the ground has not been touched. The overcrowding of the other portion can be due only to desire of money-getting. However, notwithstanding the exemption, the medical inspectors attached to the Home Office, charge themselves with examination in such cases. But, Dr. Sutherland, who attended to the London district, has been some time in the Crimea; so that as the other inspectors are much occupied in the country, it is possible that the objectionable state of the London grounds has continued longer than it might have done. From a question and answer, on the 11th inst. in the House of Commons, it will have been seen that two or three of the old intramural graveyards are still open.* The sanction of the Home Office in those cases appeared to be made a matter of necessity, by the still unexplained postponement of the opening of the new ground for the City. The ground in Holborn, attached to St. Andrew's Church, now really closed, had been re-opened by taking advantage of the permission to continue the use of the ground of the same parish, in Gray's-inn-lane. The continuance of "pit-burial" at the West Brompton Cemetery was, we believe, an accident, arising out of the absence of the London inspector; and it was very promptly put a stop to. Besides the special cases already referred to, the only exceptions to the complete disuse of London burial-grounds, were in some few cases where one burial in each grave is permitted, till the space is thus filled; in the case of Trinity Church, Brompton, where one burial in each grave is allowed to 1st October, 1859; in the case of St. Mark's Cemetery, Camden-town, to be closed on 1st May next; St. Dunstan's, Stepney, on 24th October next; and All Saints' ground, at Poplar, on 1st May next. There are, however, the important exceptions to the cases of closed grounds, of "existing rights," "private vaults," and private graves;" whilst from West Hackney, there is "no return." These "exceptions," so long as they exist, would justify apprehension—in some degree. The removal of bodies by relatives to new resting-places, practised lately in many cases—as indeed to the cemetery at Woking—is considered to be highly dangerous, and is to be put a stop to during the present session. Mr. Simon, the late medical officer to the City of London, in 1848-9 appeared to report an opposite opinion, as to the danger relatively, of the two courses.

The parishes which now inter in the Necropolis at Woking, are those of St. Giles, Bloomsbury; St. George, Bloomsbury; St. Luke, Chelsea; St. Margaret, Westminster; St. John, Westminster; St. Saviour's, Southwark; St. Olave, Southwark; Bermondsey parish; Chiswick; and St. Paul and St. Nicholas, Deptford: ground has been allotted to St. Anne's Soho, and St. George's in the East; and arrangements are in progress with other parishes. No difference, we are told, is made in the ceremonial between funerals of the better class and those of paupers: the latter are what we can speak to, and they are performed in a very proper manner. The guild of St. Alban, an association of lay members of the English Church, having, as one of their objects, the systematic performance of pious and charitable works, and holding the Christian burial of poor Church people to be especially incumbent on them, also inter at Woking, where a pall and other matters of the kind for the common use are carried with the corpse. The system of the Necropolis Company, we are told, has rendered evident that there is a desire, where it can be done, to dispense with much of the unmeaning frippery of the street procession.

The London station is a building in three stories, the top story being that which is on a level with the line of the South-Western Railway; with which there is a communication from the Necropolis Company's Station, by a short branch. Below, there are two entrances from the public streets: one from the Westminster-bridge-road, by an arch of Norman character, in ornamental red brick and tile work, and the other from the Cornwall-road. The gates, of elaborate workmanship, by Messrs. Bailey, like the ironwork elsewhere which plays an important part in the effect, are of excellent character. The principal gates were exhibited in 1851. On passing along the carriage-way, a neighbouring slaughter-house is so offensive, that it must be productive of some unfounded prejudice against the company's arrangements. The principal portion of the lower floor is occupied by a large room—including also the height of the floor above—used for depositing the bodies till the time of departure of the train. Pause before that black box, made of rough and splintered boards, badly nailed together. Ere this you have looked on death in some shape, and haply not without awe, and other vague and undefinable emotion; and now, not with indifference, or without much self-communing, you seem almost to discern the poor form of the mortal *found drowned*, cased in that "narrow cell," whereon you read this inscription chalked on the lid,—

"*A Female Unknown.*"

Turn to the coffin of a different class, of which the "ornamented plate of inscription, four pair shield handles, and japanned and burnished nails,"—as usual in this class of "ornaments"—seem to conjoin the vanity of show with the utmost abasement of mockery and pretence; and marvel that the vices which find expression in our *art* should be cherished even to the grave. The furniture of our last resting-place should be at least truthful—claiming to be no more than it is. The room we are in—like others in the building—is well ventilated by large panels of perforated zinc; the different channels communicating with a tall shaft, in which means of exhaustion are provided. The coffins are raised by lifts, worked by a steam-engine of six-horse power. There is a principal staircase of good architectural character, lighted from the top, and a separate staircase for the mourners of the pauper class. In the one-pair story, two large spaces are appropriated as waiting-rooms for the male and female mourners of the class last mentioned; and to these, closets and lavatories are provided. Smaller waiting-rooms, each with similar conveniences, and appropriately furnished, are provided for funerals of the "artizan" and next superior classes. On the top floor, the principal waiting-rooms are two for the first-class funeral parties—one on each side of the staircase. Each has an adjoining apartment for closets and lavatories. The provision made in these last particulars may have appeared great; but the usual railway-station system of separate waiting-rooms (that is to say, allowing one for ladies) is required, in fact, for each funeral party. In this view of the case the plan is faulty. The ground taken up is indeed quite inadequate,—shelving off, so as to have for great part of the length very slight depth. The practical effect of the arrangement is at present this:—When the number of funerals in one morning is small, different members of a party are too widely separated: as (in the case of there being *one* first-class funeral) across a public staircase. On the other hand, where the number is greater, for some of the parties there can be no separate ladies' room. A very large station, it may be said, would be required, and great expense in the fittings: but the want of this, if the Woking Cemetery is to be used as much as we hope it will be, will be attended with serious inconvenience. It must be recollected that "separate apartments" for each party of mourners, are offered in the Company's prospectuses. Even with the present area of ground, the arrangement might, we should think, have been better; and the positions of some of the doors of the closets in the second-class rooms are to be altered. A plan having a considerable number of small rooms—capable of being thrown together on the arrival of larger parties than usual—would be found most suitable. In the temporary buildings at Woking, the deficiencies referred to are rather greater than in London; but there, there are female attendants attached to the refreshment department. In other respects, the arrangements of the London station seem unexceptionable,—the moving of the coffins and starting of the train being carefully and noiselessly conducted. The railway, within the terminus (roofed over, on the ridge and valley system), is carried by deep girders above the carriage-way of entrance, which last receives its light from the spaces between the lines, those being filled in with glass slabs. The architecture of the building, next the departure platform, is expressed in good plain brickwork, with arch-headed apertures. A globe gas-light is in the centre of each of these—supported in the case of the windows by an ornamental ironwork standard. The coffins, on reaching the platform, are placed each in a separate compartment, made for the purpose with strong straps to prevent displacement by the motion of the train. The hearses, fitted with these compartments, are of two kinds, differing, however, very slightly, and are similar externally to the ordinary parcels' van, though with several doors, and a more finished appearance. The carriages are the ordinary ones, supplied by the South-Western Company, which, in regard to the second-class, plastered with advertisements, may by some be deemed objectionable. The train proceeds along the South-Western Railway to the branch line leading into the cemetery, which we reach in less than an hour without discovering any difference between our journey and one by an ordinary train, except that we have made no stoppage till we reached the junction. The distance from the Waterloo Station is 2¼ miles. We descend at the station near to the chapel

* What is meant by an obscurely-worded order in Council, in the *Gazette* of Tuesday last,—referring to postponement,—we have had no opportunity yet of ascertaining.

in the unconsecrated ground, whilst some of the coffins are removed; and the train which had descended the incline, is drawn on by horses to the consecrated ground some distance farther.

At the cemetery, we find much to interest us; and the particulars will afford matter for another article.

ROYAL INSTITUTE OF BRITISH ARCHITECTS.

Bells of the Royal Exchange.—The discussion on the subject of Bells was resumed and closed on the 11th ult. Mr. W. L. Baker, Mr. R. C. Nicols, Mr. Ashpitel, Mr. Foggo, Mr. Ferrey, Mr. Denison, Q.C. and Mr. Varley taking part in it. The chairman, at the close of it, spoke with regard to the failure of the Royal Exchange bells, over which he had no control. They had never succeeded in getting these bells in tune. There was a certain scale of notes which were intended to play tunes, and therefore should have been properly pitched. There was no particular necessity to study expense, and he had been anxious to get a good chime of bells. At Messrs. Mears's works, he found a rude system in operation, which appeared inconsistent with anything likely to ensure tune. He saw, indeed, that the whole matter was traditional; and he therefore suggested that bells so roughly cast could hardly be in tune; and he further proposed to put the series in a row, and by striking, ascertain whether the gamut could be produced. This trial, however, was declined. The machinery for the chimes was made by Mr. Dent, one of the most skilful mechanicians in the world; but as soon as they began to play, the effect was highly disagreeable. In fact, the peal was not in tune. Then came a series of suggestions, such as "the hammer strikes too hard;" but as Mr. Dent said, it was easy to make it strike softer, by merely shortening the lever. The architect and the tower were in fault; indeed, it was anything but the bells; but in fact the tower contained a large square chamber, with four large windows filled with louvres, &c. He even offered to take the louvres away. At last it was agreed to take down the bells, and re-cast them of a larger size, and with two additional bells; but the new bells failed. It was plain that the makers had no rule; yet they produced testimonials without number, and engaged that the bells should be in tune to the satisfaction of Mr. Edward Taylor, Gresham Professor. At first they insisted that the bells were in tune, but Mr. Taylor tested them with a violin to show that there could be no possible mistake. The bells were chipped, cut and altered in every way without success, and he (the chairman) never could get people to believe that *tone* was not *tune*. Mr. Taylor, of Loughborough, re-cast the bells, but without success, and he believed the chimes remained a failure. He had found in an old manuscript an illumination showing a man grinding bells, and he believed that the ancients in fact turned the inside of their bells in an accurate form with regard to the outside, according to some rule now lost. He believed that the same law or mathematical process by which he had seen Erard set out the top of a harp, might be applied to a bell, so as to conduce to its accurate tuning in any particular note. He had heard the traditional story that the founder of the tenor bell of Bow Church never left it, but was always filing or hammering the inside till he got it to the proper note or pitch of the C of that time. The chairman further observed that a letter had appeared in the *Times* stating that the Westminster bell could not be got into the clock-tower, as Sir Charles Barry had forgotten to provide an access for it. It was due to Sir Charles Barry to state that this was not correct. He had not forgotten the matter, nor was there any difficulty in it; neither would it cost 3,000*l.* to erect a scaffold to raise the bell. The meeting was aware that the whole of one side of the lower story of the clock-tower facing west, consisted of a large arch, which had been filled up with brickwork; the bell would be brought up to the arch, and so much of the brickwork removed as might be necessary, and the bell would then be raised without any difficulty whatever.

The Chairman then adverted to and explained some of his remarks made at the opening of the session. His observations will be found below under another heading, for the sake of reference hereafter.

At a meeting on the 25th ult. a letter from Mr. G. G. Scott, in reply to Mr. Tite's previous observations, and the production of which had been delayed, was read. This we also give *in extenso*. M. Viollet le Duc, architect, of Paris, was elected honorary and corresponding member; and a paper, entitled, "Archæological Studies in Jerusalem," was read by Mr. G. J. Wigley, associate.

The Diploma Question.—The Council have come to the following resolution on this subject:—"That the Council feel that it is as yet premature to pronounce an opinion upon a subject of so great importance as the establishment of an examination with reference to granting a diploma in architecture. That before they could recommend the Institute to undertake such a charge, it would be necessary carefully to ascertain the opinion of members of the profession generally. They moreover feel that the duty which has been recently intrusted to the Institute by the Legislature, viz. the examination of the candidates for the office of district surveyor, will enable them, after a sufficient experience of such examinations, to come to a sounder judgment than they can at present on the subject of the diploma." It appears to us that they have adopted the right course.

The ensuing Election of Officers.—Mr. Scoles, the senior hon. secretary of the Institute, having expressed his intention to retire from that office, the duties of which he has fulfilled for many years, the profession will be glad to learn that Mr. Digby Wyatt, at the request of some of the leading members, has consented to allow himself to be put in nomination at the election in May. The many qualifications of Mr. Wyatt, both literary and professional, and the earnest and continuous attention which Mr. C. C. Nelson bestows upon the affairs of the Institute (devoting to it indeed a large portion of his time), give promise of increased usefulness and of an active development of the resources of this body, for promoting the best interests of architecture and the profession in general. Mr. Scoles has earned the best thanks of the Institute by his attention and unfailing urbanity. We have since been asked to say that Mr. Papworth has placed himself at the disposal of the body for election to the above office.

GOTHIC OR CLASSIC?

MR. TITE said, at the meeting of the Institute to which we have already referred: I am anxious to put myself right with reference to some remarks which I made in the discussion on the diploma question, on the undue preference (in my opinion) given to mediæval architecture, and which remarks have been somewhat misunderstood. I was an early cultivator of mediæval architecture: I esteem it very highly, and I think I understand it; but all that I wanted to urge was that it was not reasonable to abandon the better styles of architecture (for many purposes) for what I considered the fashion of the day. That the study of classical architecture is neglected, is proved by the fact that there have been no competitors for the architectural medals of the Royal Academy, as stated by the Professor in a recent lecture. Now why is that? Surely because the young architects of the day are studying mediæval church architecture to the abandonment of other studies; and I presume, therefore, until the Academy can be induced to give a medal for a design in that style we shall have the same result. Such a state of things I greatly regret, because classical architecture gives us the best and most certain principles of feeling and thought in architecture. With regard to mediæval architecture, it is true we have become good copyists, but our forefathers did vastly more than this, for they urged on their thoughts and inventions,—they went on from excellence to excellence, and they often obtained it in the search after novelty. Young architects should study the principles of things, and apply them to expression, utility, and fitness in architecture. In the remarks to which I have referred, I found fault with the unfitness of modern mediæval churches for the purposes for which they were built. I quoted one which, although elegant and beautiful, was anything but a Protestant church. I stated, amongst other things, that on the south side of the deep chancel of that church there was a range of sedilia. Now of what Protestant use could they be? The rubric says the minister shall "stand on the north side of the altar;" and even among Roman Catholics they are obsolete. Such ornaments are not only useless but expensive, and inconsistent with the purposes to which the churches are applied. Then again I have seen lately, in two large squares near Belgrave-square, large masses of building in which classical architecture would have given a better church than those which have been built there. I allude to Warwick-square and Chester-square, composed of masses of regular Italian buildings; and, forming one side of each square, irregular Gothic churches with spires are placed, which appear to me incongruous and out of place: and inside they are not adapted to those vast congregations which frequent them. That these are the opinions of men as well able to judge as myself, is proved by the remark of Mr. Petit, the learned ecclesiologist. He says,*—"There are good reasons why we should rather make the best of our old churches, than materially alter them or destroy them, to build others in their room. The impression they are calculated to produce more than compensates for some inconvenience in their form or arrangement; but there seems no reason why we should ever plan or build a new church of an inconvenient form, or in any way unsuited to our own manner of worship. If, for instance, it is desirable that all the congregation should be within sight and hearing of the minister, why should a church ever be built in which a part of the congregation is hidden from him when he performs any part of the service in the usual place? And this must be the case in every church having aisles which terminate at the division between the nave and chancel. If we find that galleries are useful and convenient, why should we build churches that will not bear galleries, or to which they are a disfigurement? If we professedly adopt high-pitched roofs as suitable to our climate, why should we ever combine them in such a manner as to leave a lodgment for snow or rain? There may be difference of opinion as to the advantage of an unbroken area, or the expediency of galleries; still they serve my purpose in illustrating the proposition I would advance, which is, that an architect ought not to abandon a convenient arrangement on account of its ugliness, but rather try to get rid of the ugliness without giving up the convenience. If, then, a feeling that his first object is to make his building fully answer its primary purpose, and a determination that nothing shall be allowed to interfere with this object, be referrible to a spirit of utilitarianism, I conceive that so far, at least, an architect ought to be a utilitarian."

That is the opinion of a modern ecclesiologist of great learning and judgment; but I will quote also the opinion of Sir Christopher Wren. He was called upon to build the City churches, and he gives this opinion on the subject.† He says,—"Churchwardens may be careless in speedily repairing drips, but they will usually whitewash the church and set up their names, but neglect to preserve the roof over their heads." He next proceeds to discuss the capacity and dimensions of the proposed new churches, and a mode of calculation to determine them from the number of inhabitants for whom these churches were to be built, which he calculated at 400,000, or five times as many as were burnt out in the City. The churches, therefore, he says, must necessarily be large, and if they were built to hold 2,000 persons each, the accommodation would fall very short of the requisites; but, he adds, in our reformed religion it would seem vain to make a parish church larger than that all who are present can both hear and see the preacher. The Romanists indeed may build larger churches—it is enough if they hear the murmur of the mass and the elevation of the host; but ours should be fitted for auditories. He considered it to be hardly practicable to make a single room so capacious, with pews and galleries, as to hold above 2,000 persons, and all to hear the service, and both to hear distinctly and see the preacher. He endeavoured to effect these objects, he says, in building the parish church of St. James, West-

minster, which he presumed was the most capacious, with these qualifications, that had then been built; and yet at a solemn time when the church was much crowded, he could not discern from a gallery that 2,000 persons were present.

I was rather more urged to express the opinion I did, by not desiring to see classical architecture neglected merely in obedience to a present fashion. I believe that fashion will to a certain extent pass: I may be mistaken, but it appears to me that the universal application of mediæval architecture and forms is an error and a great mistake. I simply suggest that as my opinion; and I regret that that which formed so important and so necessary a subject of study in my early life should be at the present day neglected for something which, though beautiful in its way, has not so many claims upon our attention, and is not so well adapted to our forms of religious worship. I have no desire whatever in the least to interfere with the views of others; but those who choose to adopt these views conscientiously will find in me a man to think for myself. I am glad to have this public opportunity of saying a word upon this matter, because by one of our most eminent professors of architecture I have been a little misunderstood. I only offer this as a matter of explanation and not of discussion at the present moment.

THE following is Mr. Scott's letter previously mentioned:—

IN a society which supposes each of its members to hold his own individual opinion, and to express them freely as he pleases, it may appear unnecessary to notice mere manifestation of feelings which every one knows our respected friend entertains; but coming *ex cathedrâ* from the chair of our Institute, and from our parliamentary representative, they may, if unanswered, appear to acquire more weight than belongs to them, and be viewed not as the feelings of an individual member only, but as those of the Institute as a body; in which case it would naturally become the duty of those who hold contrary opinions to make a formal protest, or to separate themselves from the society.
